

Multiple Vocabulary Facility (MVF)

Version 1.0 – beta 1

OMG Document Number: ptc/22-07-02

Normative reference: <https://www.omg.org/spec/MVF/1.0/>

This OMG document replaces the submission document (ad/22-06-05). It is an OMG Adopted Beta Specification and is currently in the finalization phase. Comments on the content of this document are welcome and should be directed to issues@omg.org by October 28, 2022.

You may view the pending issues for this specification from the OMG revision issues web page <https://issues.omg.org/issues/lists>.

The FTF Recommendation and Report for this specification will be published in March 2023. If you are reading this after that date, please download the available specification from the OMG Specifications Catalog.

USE OF SPECIFICATION – TERMS, CONDITIONS & NOTICES

The material in this document details an Object Management Group specification in accordance with the terms, conditions and notices set forth below. This document does not represent a commitment to implement any portion of this specification in any company's products. The information contained in this document is subject to change without notice.

LICENSES

The companies listed above have granted to the Object Management Group, Inc. (OMG) a nonexclusive, royalty-free, paid up, worldwide license to copy and distribute this document and to modify this document and distribute copies of the modified version. Each of the copyright holders listed above has agreed that no person shall be deemed to have infringed the copyright in the included material of any such copyright holder by reason of having used the specification set forth herein or having conformed any computer software to the specification.

Subject to all of the terms and conditions below, the owners of the copyright in this specification hereby grant you a fully-paid up, non-exclusive, nontransferable, perpetual, worldwide license (without the right to sublicense), to use this specification to create and distribute software and special purpose specifications that are based upon this specification, and to use, copy, and distribute this specification as provided under the Copyright Act; provided that: (1) both the copyright notice identified above and this permission notice appear on any copies of this specification; (2) the use of the specifications is for informational purposes and will not be copied or posted on any network computer or broadcast in any media and will not be otherwise resold or transferred for commercial purposes; and (3) no modifications are made to this specification. This limited permission automatically terminates without notice if you breach any of these terms or conditions. Upon termination, you will destroy immediately any copies of the specifications in your possession or control.

PATENTS

The attention of adopters is directed to the possibility that compliance with or adoption of OMG specifications may require use of an invention covered by patent rights. OMG shall not be responsible for identifying patents for which a license may be required by any OMG specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. OMG specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

GENERAL USE RESTRICTIONS

Any unauthorized use of this specification may violate copyright laws, trademark laws, and communications regulations and statutes. This document contains information which is protected by copyright. All Rights Reserved. No part of this work covered by copyright herein may be reproduced or used in any form or by any means--graphic, electronic, or mechanical, including photocopying, recording, taping, or information storage and retrieval systems--without permission of the copyright owner.

DISCLAIMER OF WARRANTY

WHILE THIS PUBLICATION IS BELIEVED TO BE ACCURATE, IT IS PROVIDED "AS IS" AND MAY CONTAIN ERRORS OR MISPRINTS. THE OBJECT MANAGEMENT GROUP AND THE COMPANIES LISTED ABOVE MAKE NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS PUBLICATION, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF TITLE OR OWNERSHIP, IMPLIED WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR USE. IN NO EVENT SHALL THE OBJECT MANAGEMENT GROUP OR ANY OF THE COMPANIES LISTED ABOVE BE LIABLE FOR ERRORS CONTAINED HEREIN OR FOR DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL, RELIANCE OR COVER DAMAGES, INCLUDING LOSS OF PROFITS, REVENUE, DATA OR USE, INCURRED BY ANY USER OR ANY THIRD PARTY IN CONNECTION WITH THE FURNISHING, PERFORMANCE, OR USE OF THIS MATERIAL, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

The entire risk as to the quality and performance of software developed using this specification is borne by you. This disclaimer of warranty constitutes an essential part of the license granted to you to use this specification.

RESTRICTED RIGHTS LEGEND

Use, duplication or disclosure by the U.S. Government is subject to the restrictions set forth in subparagraph (c) (1) (ii) of The Rights in Technical Data and Computer Software Clause at DFARS 252.227-7013 or in subparagraph (c)(1) and (2) of the Commercial Computer Software - Restricted Rights clauses at 48 C.F.R. 52.227-19 or as specified in 48 C.F.R. 227-7202-2 of the DoD F.A.R. Supplement and its successors, or as specified in 48 C.F.R. 12.212 of the Federal Acquisition Regulations and its successors, as applicable. The specification copyright owners are as indicated above and may be contacted through the Object Management Group, 9C Medway Road, PMB 274, Milford, MA 01757, U.S.A.

TRADEMARKS

CORBA[®], CORBA logos[®], FIBO[®], Financial Industry Business Ontology[®], FINANCIAL INSTRUMENT GLOBAL IDENTIFIER[®], IIOP[®], IMM[®], Model Driven Architecture[®], MDA[®], Object Management Group[®], OMG[®], OMG Logo[®], SoaML[®], SOAML[®], SysML[®], UAF[®], Unified Modeling Language[®], UML[®], UML Cube Logo[®], VSIPL[®], and XMI[®] are registered trademarks of the Object Management Group, Inc.

For a complete list of trademarks, see: http://www.omg.org/legal/tm_list.htm. All other products or company names mentioned are used for identification purposes only, and may be trademarks of their respective owners.

COMPLIANCE

The copyright holders listed above acknowledge that the Object Management Group (acting itself or through its designees) is and shall at all times be the sole entity that may authorize developers, suppliers and sellers of computer software to use certification marks, trademarks or other special designations to indicate compliance with these materials.

Software developed under the terms of this license may claim compliance or conformance with this specification if and only if the software compliance is of a nature fully matching the applicable compliance points as stated in the specification. Software developed only partially matching the applicable compliance points may claim only that the software was based on this specification, but may not claim compliance or conformance with this specification. In the event that testing suites are implemented or approved by Object Management Group, Inc., software developed using this specification may claim compliance or conformance with the specification only if the software satisfactorily completes the testing suites.

OMG's Issue Reporting Procedure

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page <https://www.omg.org>, under Documents, Report a Bug/Issue (<https://issues.omg.org/issues/create-new-issue>).

Preface

OMG

Founded in 1989, the Object Management Group, Inc. (OMG) is an open membership, not-for-profit computer industry standards consortium that produces and maintains computer industry specifications for interoperable, portable, and reusable enterprise applications in distributed, heterogeneous environments. Membership includes Information Technology vendors, end users, government agencies, and academia.

OMG member companies write, adopt, and maintain its specifications following a mature, open process. OMG's specifications implement the Model Driven Architecture® (MDA®), maximizing ROI through a full-lifecycle approach to enterprise integration that covers multiple operating systems, programming languages, middleware and networking infrastructures, and software development environments. OMG's specifications include: UML® (Unified Modeling Language®); CORBA® (Common Object Request Broker Architecture); CWM™ (Common Warehouse Metamodel™); and industry-specific standards for dozens of vertical markets.

More information on the OMG is available at <https://www.omg.org/>.

OMG Specifications

As noted, OMG specifications address middleware, modeling and vertical domain frameworks. All OMG Specifications are available from the OMG website at:

<https://www.omg.org/spec>

All of OMG's formal specifications may be downloaded without charge from our website. (Products implementing OMG specifications are available from individual suppliers.) Copies of specifications, available in PostScript and PDF format, may be obtained from the Specifications Catalog cited above or by contacting the Object Management Group, Inc. at:

OMG Headquarters
9C Medway Road, PMB 274
Milford, MA 01757
USA

Tel: +1-781-444-0404
Fax: +1-781-444-0320
Email: pubs@omg.org

Certain OMG specifications are also available as ISO standards. Please consult <http://www.iso.org>

Issues

The reader is encouraged to report any technical or editing issues/problems with this specification via the report form at:

<https://issues.omg.org/issues/create-new-issue>

1 Scope

This specification defines (1) a metamodel for the MVF vocabulary structures, (2) a set of ontologies corresponding to the metamodel and extensions supporting ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, which provides the semantic basis for the kinds of vocabularies that MVF is designed to support, and (3) an interface for integration of an MVF services with a MOF-based modeling environment.

The ontologies provided in this specification include:

- (1) a core ontology corresponding to the MVF metamodel,
- (2) an extension representing the subset of the ISO 1087 reference vocabulary used in other ISO standards for vocabulary representation,
- (3) an extension that incorporates additional vocabulary from ISO 1087 for terminology science, and
- (4) an ontology that maps the core MVF and ISO 1087 terms and definitions ontology to the W3C Simple Knowledge Organization System (SKOS) vocabulary.

MVF also reuses several ontologies from the companion Commons Ontology Library for specific patterns, including designations, collections, and classifiers.

2 Conformance

This specification defines requirements for conformance of the following types of application:

- An extension of a modeling environment to support usage of multiple, alternative vocabularies, associating the terms and definitions in those vocabularies with elements in user models.
- An application for creation and maintenance of vocabularies.
- A service for sharing dictionaries and/or shareable vocabularies.

In addition, there are two conformance points with respect to the ontologies provided herein. These are as follows:

- (1) Specification-level conformance with all of the OWL ontologies – which means that the subject application formally imports all of the ontologies (*i.e.*, through `owl:imports` statements in another ontology or via loading the full set of ontologies for reference in a knowledge base that supports OWL) with no resulting logical inconsistencies;
- (2) Linked Data-level conformance – which means that the subject application references one or more of the ontologies but does not formally import them.

For either conformance point, any references to the elements defined in a given ontology must use, or provide a mapping to, the standard OMG URI for that element. Implementations that claim specification-level conformance with the ontologies must support all of them. Users may choose to use or extend any of the MVF ontologies needed to address their individual requirements.

4 Terms and Definitions

For the purposes of this specification, the following terms and definitions apply. See section 8 in this specification for more detailed definitions of several of the terms listed below.

Community

A community (aka speech community) is typically a group of people that share a natural language and have a shared set of terms used to express concepts in their domain of interest. We refer to a set of terms that is distinguished from general use of the natural language as a vernacular. The community may be persons that share a profession, are members of the same enterprise or organization or are collaborating on a particular technology. A community may also include applications that use natural language vocabularies and/or nomenclatures.

A user viewing a model chooses a speech community/vocabulary, and the tool (dynamically) presents the model using the terms and definitions in that Vocabulary, by filtering the MVFEntry for each model element to the entry in the chosen Vocabulary.

Concept

A concept is a unit of knowledge created by a unique combination of characteristics [ISO 1087], called an MVFEntry in the context of MVF. An MVFEntry is linked to one or more model elements that represent that concept in the modeling environment.

MVFDictionary

An MVFDictionary is a collection (by reference, or possibly inclusion) of Vocabularies that share a set of MVFEntries. Each Vocabulary is a container for a set of VocabularyEntries that each represent the association of a term in that vocabulary with one of the MVFEntries identified in that dictionary. A modeling environment may include multiple MVFDictionaries, but they must address mutually exclusive concepts. Typically, one MVFDictionary will address concepts of the modeling language metamodel, and at least one additional MVFDictionary will address concepts of user-defined modeling elements.

Model Element

A model element is an element of the modeling language metamodel (*e.g.*, Element in a MOF metamodel or UML model), or an element of the user's model represented in that modeling language. In an interactive modeling environment, each model element is associated with a concept (*i.e.*, MVFEntry) of an active MVFDictionary whose terms are identified in at least one Vocabulary. Note that a model element may be an instance of a modeling language class, attribute or relationship.

Modeling Environment

Software based system allowing a user to create, edit or view models in one or modeling languages. It encompasses "modeling tool".

MVFEntry

An MVFEntry is a unit of knowledge created by a unique combination of characteristics, *i.e.*, a concept. An MVFEntry is contained in exactly one MVFDictionary and may be linked from one or more model elements that represent that concept in models. It may include links from vocabulary entries of alternative vocabularies that express the same

concept in a different natural language or vernacular. It is possible that some concepts are not mapped from an entry in any vocabulary, and that not all MVFEntries are associated with model elements in the active model.

Ontology

An ontology specifies a rich description of the

- Terminology, concepts, nomenclature,
- Relationships among and between concepts and individuals, and
- Sentences distinguishing concepts, refining definitions and relationships (constraints, restrictions, regular expressions)

relevant to a particular domain or area of interest. [OE]

Term

A term is a word or phrase (*i.e.*, a verbal designation, as opposed to a name or symbol) that expresses a specified concept in the natural language or vernacular of a speech community.

Vernacular

A set of terms used by a speech community that is distinguished from general use of the natural language. The community may be persons that share a profession, are members of the same enterprise or organization or are collaborating on a particular technology.

Vocabulary

A Vocabulary is a set of VocabularyEntries (names, terms, other designations such as symbols, and their definitions) for the language of a particular speech community that is based on a specified natural language. A speech community may create a Vocabulary by specializing an existing Vocabulary and overriding selected terms, adding terms for new concepts and incorporating the remaining terms and definitions of the existing Vocabulary. This mechanism may be employed to introduce synonyms as the primary terms of the specializing community. Both Vocabularies should be in the same natural language so that definitions remain meaningful.

VocabularyEntry

A vocabulary entry associates a concept with a definition and designation for that concept in the context of the vocabulary. The definition and designation are expressed in the natural language associated with that vocabulary and the associated user community, and any terms used in a definition should be consistent with their definitions in that vocabulary.

5 Symbols

5.1 Symbols

See clause 6.5, Notation, for a description of the logic symbols used to describe the ontologies covered in this specification.

5.2 Abbreviations

The following abbreviations are used throughout this specification:

API4KP – APIs (Application Programming Interfaces) for Knowledge Platforms

DL – Description Logics

IRI – Internationalized (Uniform) Resource Identifier

ISO – International Organization for Standardization

LCC – Languages, Countries and Codes

MVF – Multiple Vocabulary Facility (this specification)

OWL – Web Ontology Language

ODM – Ontology Definition Metamodel

RDF – Resource Definition Framework

UML – Unified Modeling Language

URI – Uniform Resource Identifier

URL – Uniform Resource Locator

W3C – World Wide Web Consortium

XMI – XML Metadata Interchange

XML – eXtensible Markup Language

6 Additional Information

6.1 Changes to Other OMG Specifications

None.

6.2 Acknowledgments

The following organizations submitted this specification:

- Thematix Partners LLC

The following additional organizations contributed to this specification:

- Agile Enterprise Design
- agnos.ai U.K. Ltd.
- Capacity Post, Inc.
- Mayo Clinic
- U. S. National Institute of Standards and Technology (NIST)

The following additional companies and organizations are supporters of this specification:

- Auxilium Technology Group
- EDM Council, Inc.
- Rensselaer Polytechnic Institute
- Visumpoint LLC

6.3 Intellectual Property Rights

The MVF specification, metamodel and ontologies are available under the OMG's Copyright and Non-Assertion Covenant (see <https://www.omg.org/cgi-bin/doc.cgi?ipr> for details). The ontologies themselves are licensed under the MIT open-source license agreement, available at <http://opensource.org/licenses/MIT>.

6.4 Reuse of the Commons Ontology Library and Languages, Countries and Codes (LCC) Ontologies

The Multiple Vocabulary Facility (MVF) ontologies use and extend a number of the ontologies specified in the companion Commons Ontology Library specification. The Commons Ontology Library contains small but fundamental building block ontologies that are essential to MVF. MVF also uses ontologies included in the Languages, Countries and Codes (LCC) specification for the identification of languages and geographic regions associated with vocabulary elements.

6.5 Notation

The ontology diagrams included herein are ODM-compliant UML diagrams. In other words, they conform to the UML Profiles for RDF and OWL specified in the OMG’s Ontology Definition Metamodel [ODM] Specification. This includes the set of UML stereotypes and graphical notation used in the diagrams provided.

The color scheme employed in these diagrams includes:

- Basic OWL Classes: white for classes defined within the current (local) ontology, amber for classes defined within an imported (referenced) ontology
- OWL Restriction Classes and other Class Expressions (unions, intersection, complements): green
- OWL Object Properties: blue
- OWL Data Properties: dark gray
- OWL Datatypes: pink
- OWL Individuals: light gray

Note that these colors are provided for presentation purposes only, and are non-normative.

For the library there is an “about” file, which provides metadata about the library, described below in tabular form. The ontologies themselves are documented as ODM-compliant UML models, aside from the “about” file, annotation vocabulary, and mapping ontology. Every ontology is expressed in RDF/XML-serialized OWL and Turtle-serialized OWL [OWL 2].

The notation used to represent description logic expressions (*i.e.*, the expressions in the Parent columns in class tables containing ontology details) is consistent with the notation defined in the Description Logic Handbook [DL Handbook]. The notation used in this specification, representing a subset of OWL 2, is described in Table 6.1, below.

Table 6.1: Description Logic Expressions Notation

Construct	Description	Notation
<i>Boolean Connectives and Enumeration</i>		
intersection	The intersection of two classes consists of exactly those individuals which are instances of both classes.	$C \cap D$
union	The union of two classes contains every individual which is contained in at least one of these classes.	$C \cup D$
enumeration	An enumeration defines a class by enumerating all its instances.	$\text{oneOf}(i_1, i_2, i_3, \dots, i_n)$
<i>Property Restrictions</i>		
universal quantification	Universal quantification is used to specify a class of individuals for which all related individuals must be instances of a given class (<i>i.e.</i> , allValuesFrom in OWL).	$\forall R.C$, where R is the relation (property) and C is the class that constrains all values for related individuals
existential quantification	Existential quantification is used to specify a class as the set of all individuals that are connected via a particular	$\exists R.C$, where R is the relation (property) and C is the class that

	property to at least one individual which is an instance of a certain class (<i>i.e.</i> , someValuesFrom in OWL).	constrains some values of related individuals
individual value	Individual value restrictions are used to specify classes of individuals that are related to one particular individual (<i>i.e.</i> , hasValue in OWL).	$\forall R.I$, where R is the relation (property) and I is the individual
exact cardinality	Cardinality (number) restrictions specify classes by restricting the cardinality on the sets of fillers for roles (relationships, or properties in OWL). Exact cardinality restrictions restrict the cardinality of possible fillers to exactly the number specified.	$= n R$ (for unqualified restrictions) $= n R.C$ (for qualified restrictions, <i>i.e.</i> , including onClass or on DataRange)
maximum cardinality	Maximum cardinality restrictions restrict the cardinality of possible fillers to at most the number specified (inclusive).	$\leq n R$ (for unqualified restrictions) $\leq n R.C$ (for qualified restrictions)
minimum cardinality	Minimum cardinality restrictions restrict the cardinality of possible fillers to at least the number specified (inclusive).	$\geq n R$ (for unqualified restrictions) $\geq n R.C$ (for qualified restrictions)
<i>Class Axioms</i>		
equivalent classes	Two classes are considered equivalent if they contain exactly the same individuals.	$\equiv C$
disjoint classes	Disjointness means that membership in one class specifically excludes membership in another.	$\neg C$
<i>Property Axioms</i>		
complex role inclusions	Role inclusions allow [object] properties to be chained together in a sequence that is a subproperty of a higher-level property.	$R \circ R$

Note that in the case of complex restrictions, where there are nested elements in parentheses, the “dot notation” used as a separator between a property and the role filler is replaced with the embedded parenthetical filler definition. A “role” from a description logic perspective is essentially a property in OWL, and the role “filler” is the class or individual that provides the value for that role in a given axiom (*i.e.*, in a restriction or other logic expression).

7 MVF Overview

7.1 Business Value

MVF provides two key business benefits: (1) The market for modeling language implementations is expanded for users who are not proficient in the original natural language used for modeling, and (2) user models can be shared with different, international or specialized communities, expressed in the language and terms that are most meaningful to them.

7.2 MVF Operation

This section provides an overview of the operational implementation of MVF.

7.2.1 General Approach

The general concept of MVF is to provide an integrated service to enable modeling tools for MOF-based modeling languages to enable users to apply specific vocabularies to their models, *i.e.* to apply the terminology expressed in an MVF vocabulary to the concepts expressed in the model from a natural language and nomenclature perspective, as appropriate. This means the concepts in the model will be translated to the user's selected vocabulary, including translation of definitions from the user's selected vocabulary. A vocabulary may comprise terms in common use by speakers of a particular natural language or it may be terms based on a natural language but used in a particular community: a profession, an industry, a company, a country, or other. Note that a vocabulary can be based on another vocabulary and only define different terms for selected concepts.

MVF Core Structure

Figure 1: MVF Structural Overview

Figure 1, above, provides a notional example use of MVF. See Annex B for an actual example using the MVF metamodel. On the left are two elements of a model in the modeling environment. Each of these elements is associated with an MVFEntry in the MVF metamodel. These MVFEntries represent the concepts and relationships expressed in the model. These concepts are contained in an MVFDictionary. The dictionary also links to a set of vocabularies for its concepts. A vocabulary represents a set of terms of a user community and can be selected by a user such that the terms of the vocabulary are applied to the concepts in the model..

7.3 “About” the MVF Ontologies

An “about” file for the MVF ontologies provides metadata describing them. This file, which is provided in both RDF/XML and Turtle serializations of the Resource Description Framework (RDF), is designed to (1) describe the machine-readable content of the specification for users that download the ontologies directly and import them into tools that can interpret and display the files, (2) for potential use in tagging the specification document on the OMG site, and (3) to provide a single file that imports the ontologies for ease of use (similar to a *make file* for software), excluding the mapping to the Simple Knowledge Organization System (SKOS), which may or may not be desired.

7.4 Namespace Definitions

The namespaces and prefixes corresponding to external elements required for use in the MVF ontologies are provided in Table 7.1. Table 7.2 provides the namespace declarations required for use of the ontologies themselves. The prefixes provided in Tables 7.1 and 7.2 are normative, and their use is required in any conformant application or extension.

Table 7.1: Prefixes and Namespaces for referenced/external vocabularies

The namespace approach taken for MVF is based on OMG guidelines and is constructed as follows:

- The standard protocol, authority, and top level specification part of any OMG specification namespace, which is <https://www.omg.org/spec/>
- The abbreviation for the specification: in this case MVF
- The ontology name

Note that the URI/IRI strategy for the ontologies included in the library takes a “slash” rather than “hash” approach, in order to accommodate server-side applications.

Namespace prefixes are constructed as follows with the components separated by “-“:

- The specification abbreviation: mvf
- An abbreviation for the ontology name

The namespaces and prefixes for the individual ontologies are summarized in Table 7.2. These are given in alphabetical order, rather than with any intent to show imports relationships. The table includes the namespace definitions for the “about” file that is part of the machine-readable deliverables for the specification, but that is not required for imports closure. Note that these are not versioned, although version IRIs are included in every OWL ontology and are documented in the metadata for each of them.

8 Multiple Vocabulary Facility (MVF) Metamodel

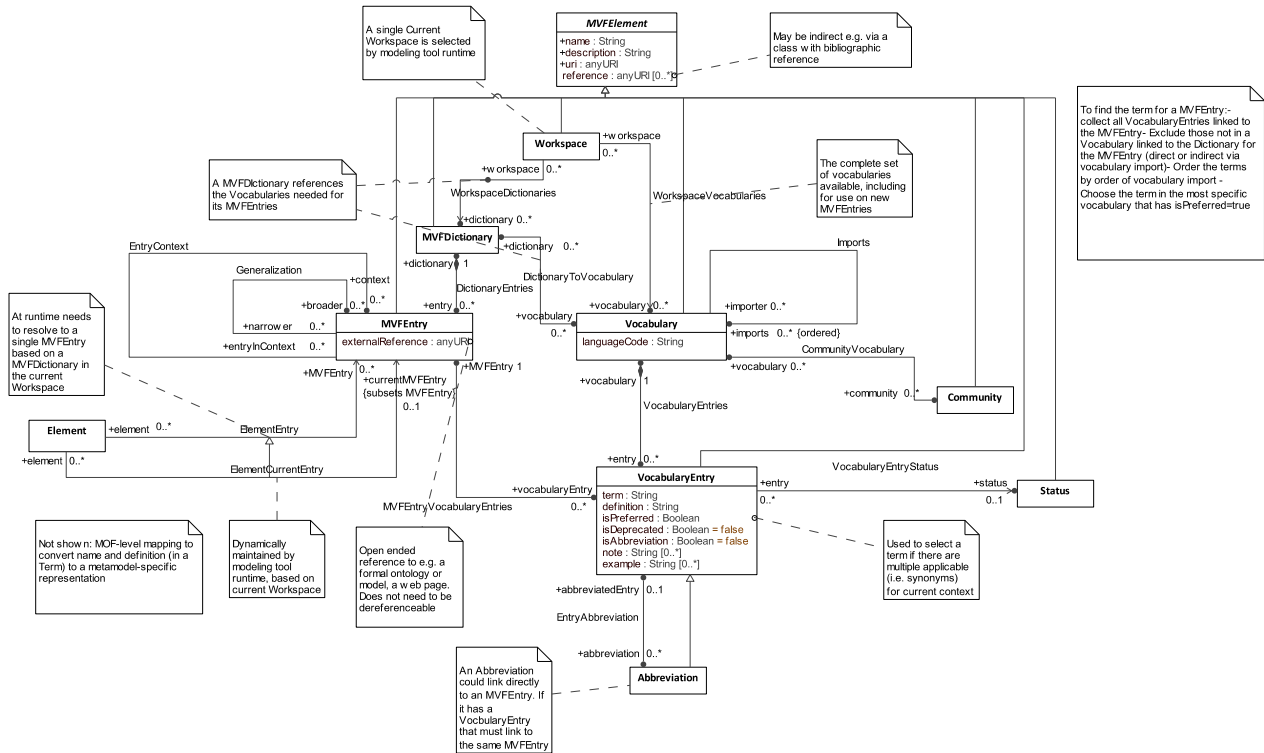

Figure 2: Multiple Vocabulary Facility Metamodel

8.1 Element [Class]

A model element is an element of the user’s model represented in a modeling language. In an interactive modeling environment, each Model Element is typically associated with a concept (*i.e.*, MVF Entry) of an active MVF Dictionary whose terms are identified in at least one Vocabulary.

Property	Description
MVFEntry [0..*]	Link to MVFEntries for the Element concept in MVFDictionaries.
currentMVFEntry [0..1]	Link to the MVFEntry for the Element concept in the current MVFDictionary in the Workspace. This is dynamic and will be implicitly updated when the current Workspace is updated.

Note: The above element is part of MOF and is not part of the MVF specification. It is described here to provide context for related properties from the MVF metamodel,

8.2 MVFElement [Class]

MVFElement is an abstract supertype for many of the classes in the MVF metamodel. *i.e.*, a workspace, dictionary, vocabulary, or component of a dictionary or vocabulary.

Property	Description
name:String [1]	Attribute for the name of the instance
description:String [1]	Attribute describing the instance
uri:anyURI [1]	Attribute for the URI identifying the instance
reference:anyURI [0..*]	Attribute linking to relevant resources that provide further information about the element

8.3 Workspace [Class]

A workspace is an MVF element that references a consistent set of the MVF dictionaries and vocabularies to be used in a modeling environment. It's the responsibility of a conformant modeling tool to select the current active Workspace, which is then used to resolve from a Model Element to the most appropriate Vocabulary Entry to provide the term and definition.

Property	Description
dictionary [0..*]	Link to the MVF Dictionaries
vocabulary [0..*]	Link to the MVF Vocabularies

8.3.1 Generalizations

MVFElement

8.4 MVFDictionary [Class]

An MVFDictionary is a collection (by reference) of MVFEntries and the vocabularies that provide terms for them. Each vocabulary is a container of a set of vocabulary entries that each represent the association of a term in that vocabulary with one of the MVFEntries identified in that dictionary. .

Property	Description
entry [0..*]	Link to the MVFEntries contained in the dictionary
vocabulary [0..*]	Link to the vocabularies referenced by the dictionary

8.4.1 Generalizations

MVFElement

8.5 MVFEntry [Class]

An MVF Entry is a unit of knowledge created by a unique combination of characteristics, *i.e.*, a concept. An MVF entry is contained in exactly one MVF dictionary and may be linked to by one or more model elements that represent that concept in the modeling environment. It will be linked to by vocabulary entries of alternative vocabularies that express the same concept in a different natural language or vernacular. It is possible that some concepts are not mapped to an entry in any vocabulary, and that not all MVF entries are associated with model elements in the active modeling environment.

Though MVFEntries are not intended to provide a concept modeling capability, two specific associations are available to provide context, in the scenario of mapping a Model Element to an existing MVF Entry. It is the responsibility of conformant tools to make use of these to meet the needs of their users:

- **broader:** this typically links to a MVF Entry representing a more general element of the same type (e.g. a superclass)
- **context:** this typically references a containing MVF Entry such as that for a Package (for a MVF Entry representing a class) or a Class (for one representing a Property).

Property	Description
dictionary [1]	Link to the MVFDictionary containing the MVFEntry
broader [0..*]	Link to an MVFEntry for a more general concept (has inverse of <i>narrower</i>)
context [0..*]	Link to another MVFEntry that provides context for this MVFEntry
externalReference: any URL	Attribute for an open ended reference or identifier related to the concept or thing represented by the MVFEntry. This could reference an external ontology element, concept specification, model, description, web page, or other resource.

8.5.1 Generalizations

MVFElement

8.6 Vocabulary [Class]

A Vocabulary is a set of representations of concepts (terms and definitions) for the language of a particular speech community that is expressed in a specified natural language. A speech community may create a vocabulary by importing a one or more existing vocabulary and overriding selected terms, adding terms for new concepts and (implicitly) incorporating the remaining terms and definitions of the existing vocabulary. This mechanism may be employed to introduce synonyms as the primary terms of the specializing community. Both vocabularies should be in the same natural language so that definitions remain meaningful.

Property	Description
dictionary [0..*]	Link to associated MVFDictionary(ies) that provide the meanings of the terms
languageCode [1]: String	Attribute containing the identifier for the language in which the vocabulary is expressed, as defined in ISO 639
vocabularyEntry [0..*]	Link to the VocabularyEntries contained in this Vocabulary
community [0..*]	Link to the associated speech communities
imports [0..*]	Link to other Vocabularies that are included by reference in this Vocabulary

8.6.1 Generalizations

MVFElement

8.7 VocabularyEntry [Class]

A vocabulary entry associates a definition and term (name, designation, abbreviation) with one concept (MVFEEntry) in the context of the vocabulary. The definition and term are expressed in the natural language associated with that vocabulary and the associated user community.

Property	Description
vocabulary [1]	Link to the Vocabulary
MVFEEntry [1]	Link to the MVFEEntry (concept) for VocabularyEntry
term:String [1]	A textual symbol for an MVFEEntry in the language of the Vocabulary
definition:String [1]	Textual definition for an MVFEEntry in the language of the Vocabulary, using terms from that vocabulary.
isPreferred:Boolean [1]	If true, indicates that the VocabularyEntry includes the preferred term and definition in this vocabulary, corresponding to the MVFEEntry. If false, indicates that the term for this VocabularyEntry is a synonym for the MVFEEntry.
isDeprecated:Boolean [1]	If true, indicates that the VocabularyEntry term and/or definition is not to be used in new models or efforts, and is likely to be eliminated in future versions of the Vocabulary.
isAbbreviation:Boolean [1]	If true, indicates that the term in the VocabularyEntry is an abbreviation for some other term in the Vocabulary.

note:String [0..*]	A multivalued text field that can be used to capture a variety of metadata associated with a VocabularyEntry.
example:String [0..*]	A multivalued text field that can be used to capture examples associated with a VocabularyEntry.
status [0..1]	Link to an optional rating established from a predetermined scale and used to evaluate the standing of a term (vocabulary entry) in the context of a given vocabulary

8.8 Community [Class]

A community is a group of people that share a natural language and have a shared set of terms used to express concepts in their domain of interest. We refer to a set of terms that is distinguished from general use of the natural language as a vernacular. The community may be persons that share a profession, are members of the same enterprise or organization or are collaborating on a particular technology.

8.8.1 Generalizations

MVFElement

9 MVF Ontologies

9.1 Ontology: Multiple Vocabulary Facility

The MVF ontology consists of three components:

- a core ontology corresponding to the MVF metamodel (this ontology),
- an extension representing the subset of the ISO 1087 reference vocabulary used in other ISO standards for vocabulary representation,
- an extension that incorporates additional vocabulary from ISO 1087 for terminology science.

MVF also reuses several ontologies from the OMG Commons Ontology Library for specific patterns, including designations, collections, and classifiers.

Metadata for the MVF ontology is given in Table 9.1.

Table 9.1: Multiple Vocabulary Facility Ontology Metadata

Metadata Term	Value
OntologyIRI	https://www.omg.org/spec/MVF/MultipleVocabularyFacility/

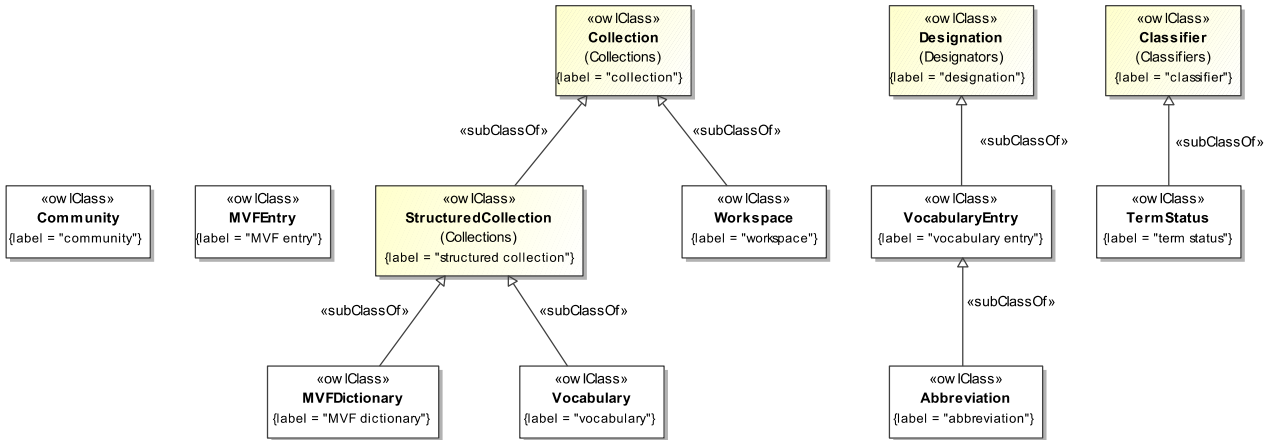

Figure 3: MVF Class Hierarchy

The class hierarchy for the MVF ontology is given in Figure 3, above. It extends classes from the Collections, Classifiers, and Designators ontologies in the Commons Ontology Library, as shown.

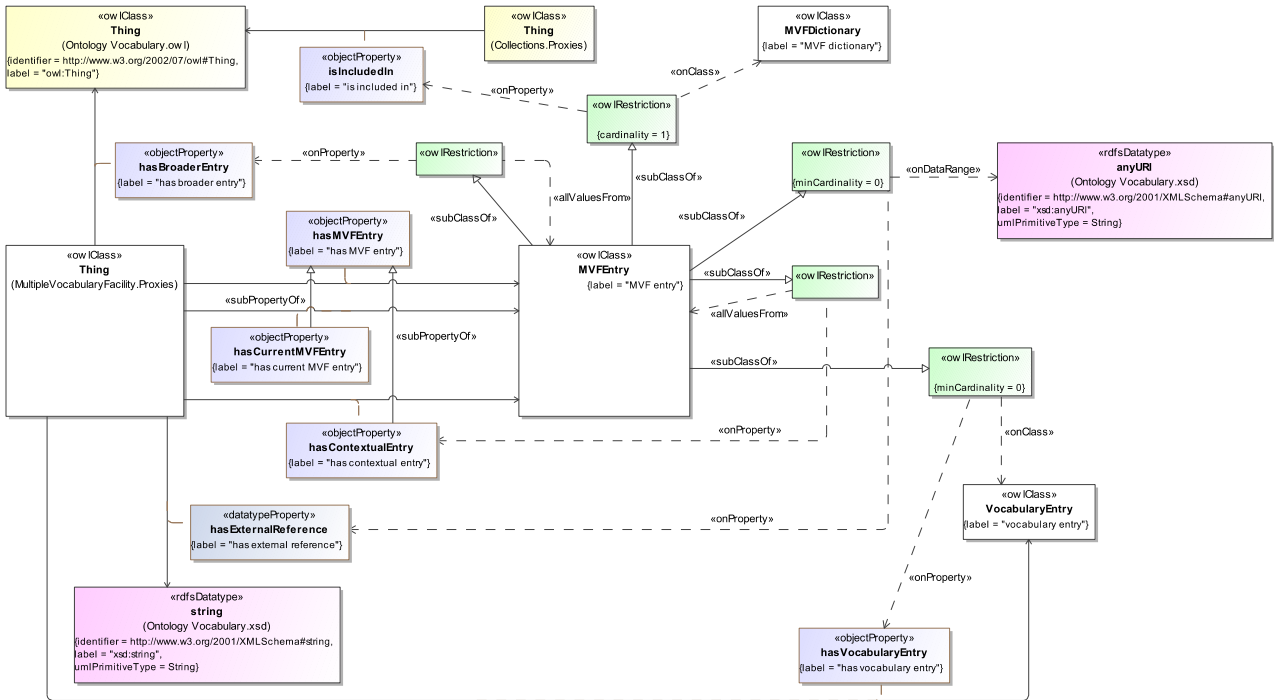

Figure 4: MVF Entry Class Diagram

Each MVF entry (*i.e.*, MVF proxy for concept) is included in an MVF dictionary, and may have vocabulary elements, and external references associated to it, as shown in Figure 4. MVF entries may be associated with other MVF entries as well.

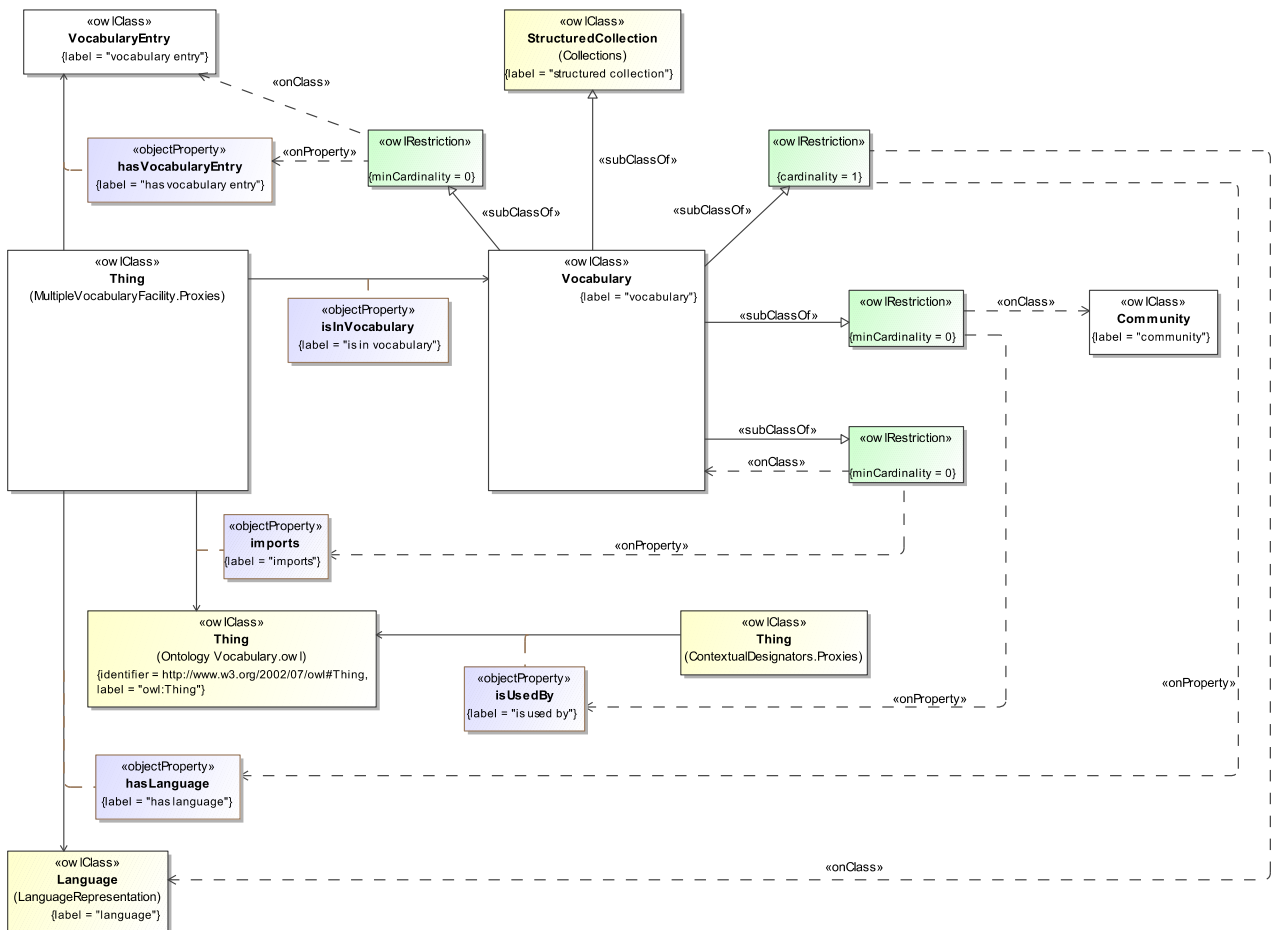

Figure 5: MVF Vocabulary Class Diagram

A vocabulary in MVF terminology is a collection of vocabulary entries, each of which represents a term and its definition in some natural language or vernacular. Vocabulary can import other vocabularies, and be imported by other vocabularies. It may be used by any number of communities, as given in Figure 6.

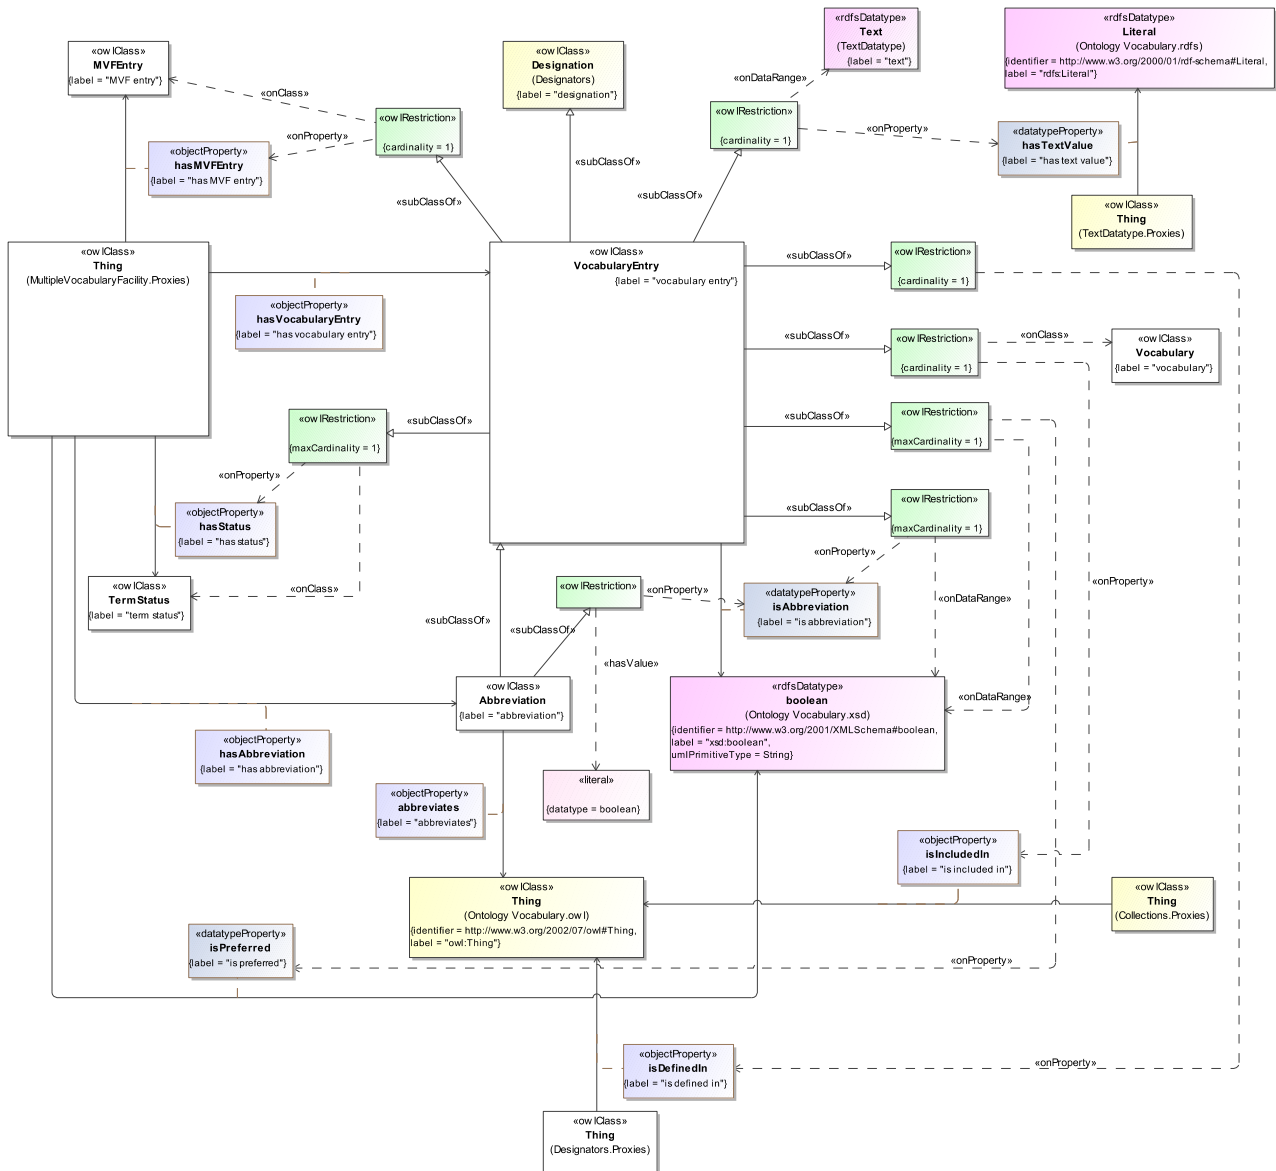

Figure 6: MVF Vocabulary Entry Class Diagram

A vocabulary entry is an element of a vocabulary that associates a concept (the MVFEntry that it references) with a definition and at least one term (name, designation) for that concept in the context of a specific vocabulary, as shown in Figure 7. The entry may or may not be (1) preferred in some context, (2) deprecated, and/or (3) be a synonym or abbreviation for the MVF entry it is associated with.

The detailed annotations and axioms that constitute the Multiple Vocabulary Facility ontology are provided in Table 9.2, below.

Table 9.2: Multiple Vocabulary Facility Ontology Details

Classes

Name	Annotations	Class Expressions
<p>Abbreviation (abbreviation)</p>	<p><u>Definition</u>: vocabulary entry formed by omitting parts from the full form of the term and that represents the same concept</p> <p><u>Note</u>: Abbreviations can be created by removing individual words, or can be acronyms, initialisms, or clipped terms.</p> <p><u>Note</u>: An abbreviation could link directly to an MVF entry. If it is an abbreviation for a vocabulary entry then it must be linked to the MVF entry for that same vocabulary entry.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.14</p>	<p><u>Parent Class</u>: VocabularyEntry</p> <p><u>Property Restriction</u>: \forall isAbbreviation.true</p>
<p>Community (community)</p>	<p><u>Definition</u>: group of people that share a natural language and have a shared set of terms used to express concepts in their domain of interest</p> <p><u>Note</u>: We refer to a set of terms that is distinguished from general use of the natural language as a <i>vernacular</i>. The community may be people that share a profession, are members of the same enterprise or organization or are collaborating on a particular technology.</p>	<p><u>Property Restriction</u>: ≥ 0 cmns-cxtsdg:uses.Vocabulary</p>
<p>MVFDictionary (MVF dictionary)</p>	<p><u>Definition</u>: collection (by reference, or possibly inclusion) of vocabularies that share a set of MVFEntries</p> <p><u>Note</u>: Each vocabulary is a container for vocabulary entries that each represent the association of a term in that vocabulary with one of the MVFEntries identified in that dictionary. A modeling environment may include multiple dictionaries, but they must address mutually exclusive concepts. Typically, one dictionary will address concepts of the modeling language metamodel, and another dictionary will address concepts of user-defined modeling elements.</p>	<p><u>Parent Class</u>: cmns-col:StructuredCollection</p> <p><u>Property Restriction</u>: ≥ 0 cmns-col:hasMember.MVFEntry</p> <p><u>Property Restriction</u>: ≥ 0 cmns-col:hasMember.Vocabulary</p>
<p>MVFEntry (MVF entry)</p>	<p><u>Definition</u>: unit of knowledge created by a unique combination of characteristics</p> <p><u>Note</u>: An MVF entry is linked to by one or more model elements that represent that concept in the modeling environment.</p> <p><u>Note</u>: From an ISO 1087 perspective, this is the concept ‘concept’ as used and designated by the term ‘concept’ in terminology work. It is a very different concept from that designated by other domains such as industrial automation or marketing.</p>	<p><u>Property Restriction</u>: $= 1$ cmns-col:isIncludedIn.MVFDictionary</p> <p><u>Property Restriction</u>: \forall mvf;hasBroaderEntry.MVFEntry</p> <p><u>Property Restriction</u>: \forall mvf;hasContextualEntry.MVFEntry</p> <p><u>Property Restriction</u>: ≥ 0 hasVocabularyEntry.mvf:VocabularyEntry</p> <p><u>Property Restriction</u>: ≥ 0 hasExternalReference.xsd:anyURI</p>

Properties

Name	Annotations	Property Axioms
abbreviates (abbreviates)	<u>Definition</u> : is a shortened designation for a term that is used synonymously with that term in the context of a given vocabulary or dictionary	<u>Parent Property</u> : cmns-dsg:denotes <u>Domain</u> : Abbreviation <u>Inverse</u> : hasAbbreviation
hasAbbreviation (has abbreviation)	<u>Definition</u> : has a shortened designation used synonymously in the context of the given vocabulary or dictionary	<u>Parent Property</u> : cmns-dsg:isSignifiedBy <u>Range</u> : Abbreviation <u>Inverse</u> : abbreviates
hasBroaderEntry (has broader entry)	<u>Definition</u> : has a more general MVF entry than the subject	<u>Parent Property</u> : cmns-col:isRelatedTo
hasContextualEntry (has contextual entry)	<u>Definition</u> : scopes in the context of	<u>Parent Property</u> : hasMVFEntry, cmns-cxtsdg:isApplicableIn <u>Range</u> : MVFEntry
hasCurrentMVFEntry (has current MVF entry)	<u>Definition</u> : indicates the applicable MVF entry from the active MVF workspace <u>Note</u> : This property will be implicitly updated when the current workspace changes.	<u>Parent Property</u> : hasMVFEntry <u>Range</u> : MVFEntry
hasExternalReference (has external reference)	<u>Definition</u> : has a relevant reference that is not explicitly part of the vocabulary (<i>i.e.</i> , document, web site, or other resource) <u>Note</u> : This property is string valued as the reference need not be dereferenceable at a URL.	<u>Parent Property</u> : cmns-txt:hasTextValue <u>Range</u> : xsd:string
hasLanguage (has language)	<u>Definition</u> : has a natural language in which a vocabulary is expressed	<u>Parent Property</u> : cmns-cxtsdg:uses <u>Range</u> : lcc-lr:Language
hasMVFEntry (has MVF entry)	<u>Definition</u> : links to the MVF entry (concept) a providing name and definition for a model element <u>Alternative label</u> : has multiple vocabulary facility entry <u>Note</u> : There could be many of these in different dictionaries.	<u>Parent Property</u> : cmns-col:isRelatedTo <u>Range</u> : MVFEntry
hasNarrowerEntry (has narrower entry)	<u>Definition</u> : has a more specialized MVF entry than the subject	<u>Parent Property</u> : cmns-col:isRelatedTo <u>Inverse</u> : hasBroaderEntry
hasStatus (has status)	<u>Definition</u> : associates a rating with respect to readiness or acceptability for usage with a vocabulary or MVF entry	<u>Parent Property</u> : cmns-cls:classifies <u>Range</u> : TermStatus
hasVocabularyEntry (has vocabulary entry)	<u>Definition</u> : has a designation (term) in this vocabulary	<u>Parent Property</u> : cmns-col;hasMember <u>Range</u> : VocabularyEntry

imports (imports)	<u>Definition</u> : contains as an intrinsic part	<u>Parent Property</u> : cmns-col;hasConstituent
isAbbreviation (is abbreviation)	<u>Definition</u> : whether the term for this vocabulary entry is a shortened form of another	<u>Domain</u> : VocabularyEntry <u>Range</u> : xsd:boolean
isInVocabulary (is in vocabulary)	<u>Definition</u> : has containing vocabulary	<u>Parent Property</u> : cmns-col:isMemberOf <u>Range</u> : Vocabulary <u>Inverse</u> : hasVocabularyEntry
isPreferred (is preferred)	<u>Definition</u> : is the best term to use in the context of the vocabulary for some concept <u>Note</u> : The preferred flag is used to select a term (vocabulary entry) if there are multiple vocabulary entries (i.e., synonyms) available to map to a given model element in the current context.	<u>Range</u> : xsd:boolean

9.2 Ontology: ISO 1087 – Terms and Definitions

This component of the MVF ontology is an extension representing the subset of the ISO 1087 reference vocabulary used in other ISO standards for vocabulary representation.

Metadata for the ISO 1087 – Terms and Definitions ontology is given in Table 9.3.

Table 9.3: ISO 1087 – Terms and Definitions Ontology Metadata

Metadata Term	Value
OntologyIRI	https://www.omg.org/spec/MVF/ISO1087-VocabularyForTermsAndDefinitions/

skos:scopeNote	Note that the set of ontologies provided for MVF do not provide exhaustive coverage of ISO 1087. We have not incorporated the terms related to data validation or natural language processing in the latest version of the standard, and certain classes under the heading of concept relation in the standard are handled as properties herein.

An overview of the class hierarchy for the term-related aspects of the ontology is given in Figure 8.

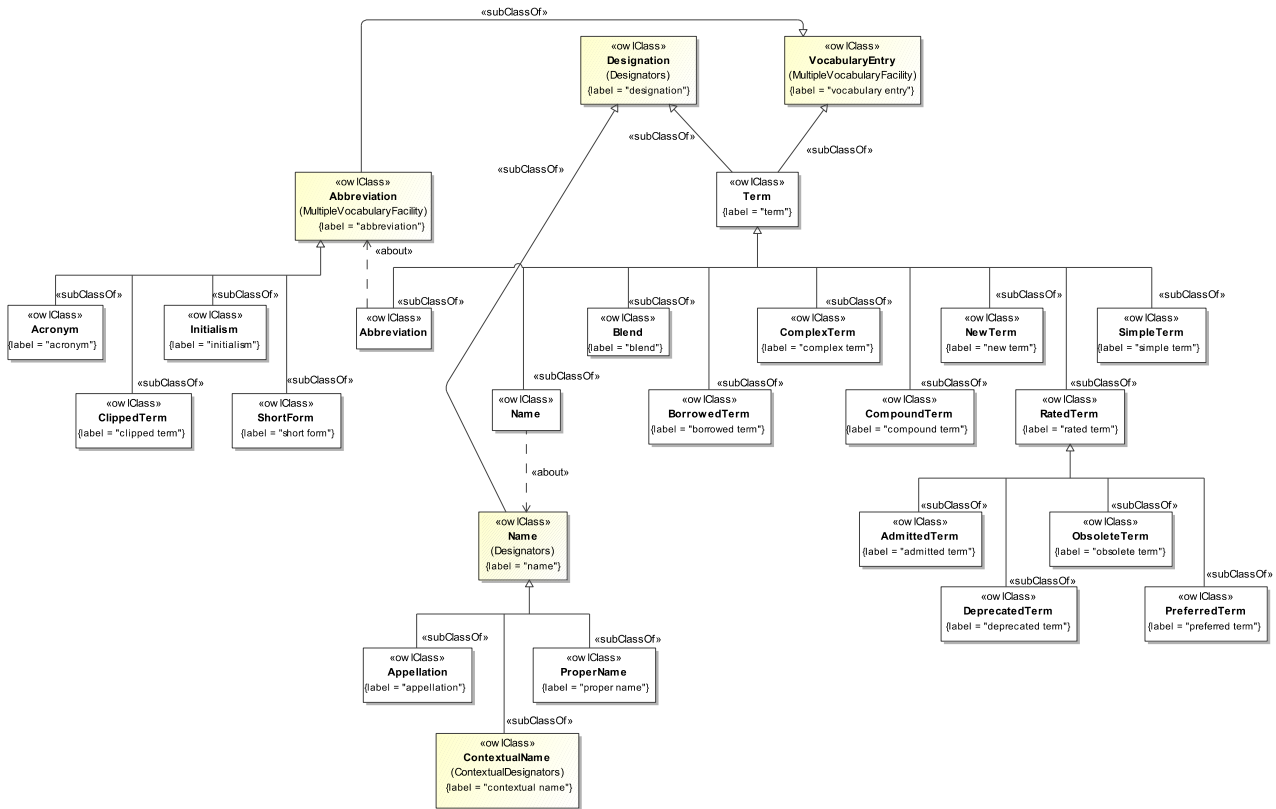

Figure 7: ISO 1087 Term Class Hierarchy

Additional features covering characteristics, definitions, diagrams, language extensions and term ratings are provided in Figure 8, below.

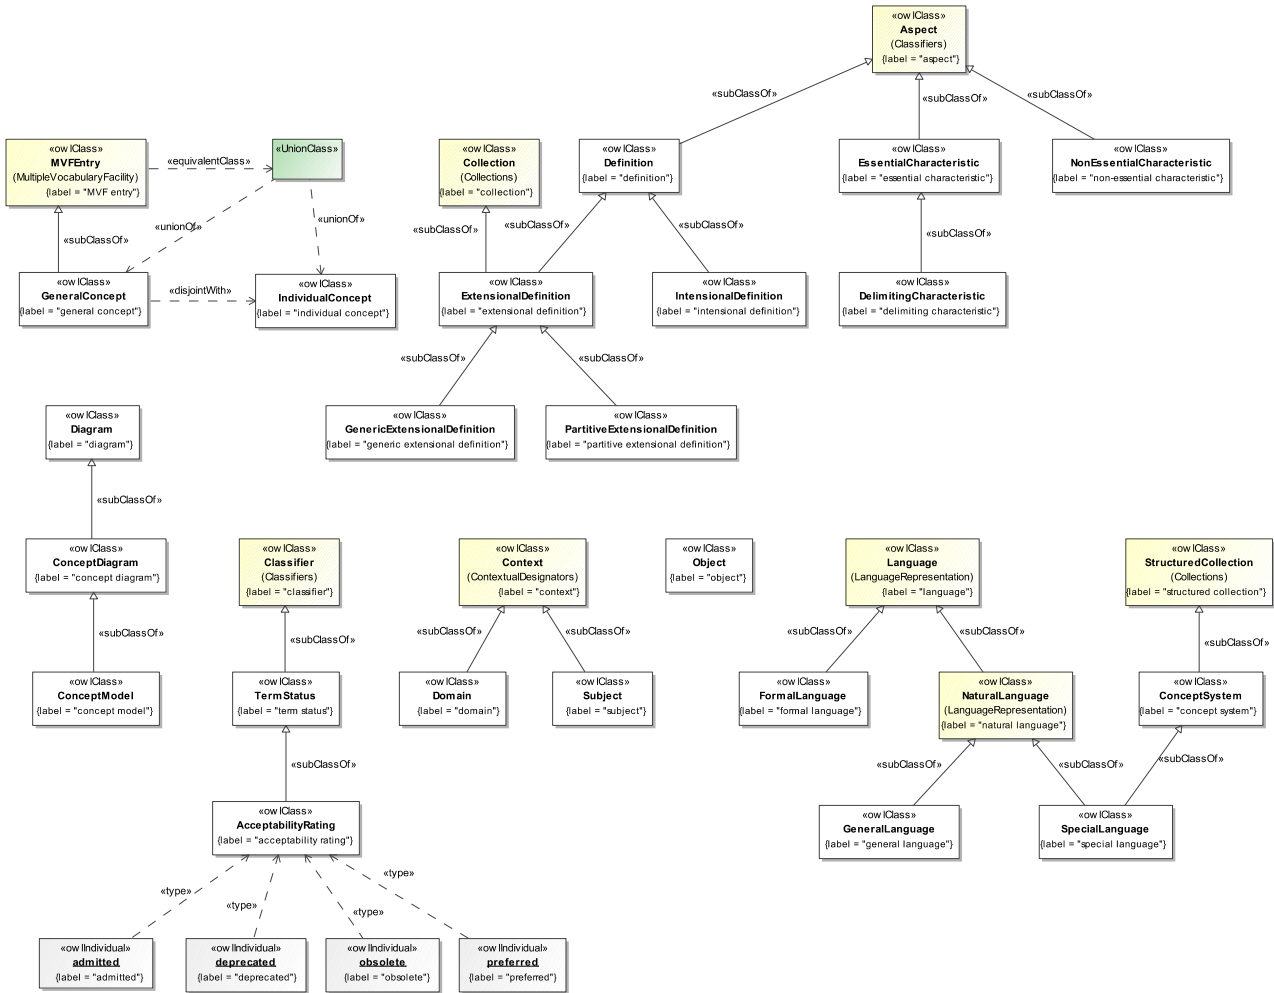

Figure 8: Characteristics, Definitions, Language Extensions, and Term Rating Aspects of the Ontology

The detailed annotations and axioms that comprise the ISO 1087 – Terms and Definitions ontology are provided in Table 9.4, below.

Table 9.4: ISO 1087 – Terms and Definitions Ontology Details

Classes

Name	Annotations	Class Expressions
cmns-cls:Aspect	<p><u>Example:</u> ‘Being made of wood’ as a property of a given ‘table’; ‘Belonging to person A’ as a property of a given ‘pet’; ‘Having been formulated by Einstein’ as a property of the equation ‘E = mc squared’</p> <p><u>Note:</u> Characteristics are used for describing concepts.</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.1.3, 3.2.1</p>	

	<u>Synonym</u> : property	
cmns-dsg:Name		<u>Parent Class</u> : Term
lcc-lr:NaturalLanguage	<p><u>Note</u>: A natural language is a language that is or was in active use in a community of people, and the rules of which are mainly deduced from usage.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.1.7</p>	
AcceptabilityRating (acceptability rating)	<p><u>Definition</u>: rating that allows for designations to be placed in order of preference as a guide to users</p> <p><u>Note</u>: The following ratings are common: preferred term, admitted term, deprecated term.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.18</p>	<u>Parent Class</u> : TermStatus
Acronym (acronym)	<p><u>Definition</u>: abbreviation that is made up of the initial letters of the components of the full form of a term or proper name or from syllables of the full form and that is pronounced syllabically</p> <p><u>Example</u>: Examples of acronyms are: laser, ISO, GATT, UNESCO, UNICEF</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.15</p>	<u>Parent Class</u> : mvf:Abbreviation
AdmittedTerm (admitted term)	<p><u>Definition</u>: term that is a synonym for a preferred term, but not rated according to the acceptability rating scale as a preferred term</p> <p><u>Example</u>: With regard to the concept ‘terminology science’, ‘terminology studies’ is an admitted term, whereas ‘terminology science’ is the preferred term, and ‘terminology’ is a deprecated term.</p> <p><u>Note</u>: There can be more than one admitted term. By analogy, ‘admitted’ can also apply to appellations, proper names, and symbols.</p>	<p><u>Parent Class</u>: RatedTerm</p> <p><u>Property Restriction</u>: hasAcceptabilityRating.admitted</p>
Appellation (appellation)	<p><u>Definition</u>: term that is applied to a group of objects whose relevant properties are identical</p> <p><u>Example</u>: Examples of appellations are: ‘Nokia 7 Plus®’ (mobile phone), ‘Adobe® Acrobat® X Pro’ (software), ‘Road King®’ (motorcycle).</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.3</p>	<u>Parent Class</u> : cmns-dsg:Name

Blend (blend)	<p><u>Definition</u>: designation that is formed by clipping and combining two or more words</p> <p><u>Synonym</u>: blended designation</p> <p><u>Example</u>: Examples of blends are: infotainment, cyberspace, quasar</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.13</p>	<u>Parent Class</u> : Term
BorrowedTerm (borrowed term)	<p><u>Definition</u>: term taken from another language or from another domain or subject</p> <p><u>Example</u>: The term ‘virus’ was originally used in biology and later transferred to information. The English term ‘internet’ has been borrowed by many other languages.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.11</p>	<u>Parent Class</u> : Term
ClippedTerm (clipped term)	<p><u>Definition</u>: abbreviation that is made up of a truncated term</p> <p><u>Example</u>: vet school (veterinarian school)</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.17</p>	<u>Parent Class</u> : Abbreviation
ComplexTerm (complex term)	<p><u>Definition</u>: term that consists of more than one word or lexical unit</p> <p><u>Example</u>: Examples of complex terms are: computer mouse, fault recognition circuit.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.9, 3.4.10</p>	<u>Parent Class</u> : Term
CompoundTerm (compound term)	<p><u>Definition</u>: simple term that can be split morphologically into separate components</p> <p><u>Example</u>: Examples of compound terms are: steamship, blackbird, afterbirth.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.8</p>	<u>Parent Class</u> : Term
ConceptDiagram (concept diagram)	<p><u>Definition</u>: graphic representation of a concept system</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.29</p>	<p><u>Parent Class</u>: Diagram</p> <p><u>Property Restriction</u>: \exists cmns-cxtmsg:appliesTo:ConceptSystem</p> <p><u>Property Restriction</u>: \exists depicts.mvf:MVFEntry</p>
ConceptField (concept field)	<p><u>Definition</u>: unstructured set of concepts belonging to the same domain or subject</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.10</p>	<p><u>Parent Class</u>: cmns-col:Collection</p> <p><u>Property Restriction</u>: \exists cmns-col:comprises.mvf:MVFEntry</p> <p><u>Property Restriction</u>: \exists cmns-</p>

		cxtdsg:isUsedBy (Domain \cup Subject)
ConceptModel (concept model)	<p><u>Definition</u>: concept diagram formed by means of a formal language</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.30</p> <p><u>Source</u>: ISO 24156-1:2014 Graphic notations for concept modelling in terminology work and its relationship with UML - Part 1: Guidelines for using UML notation in terminology work</p>	<p><u>Parent Class</u>: ConceptDiagram</p> <p><u>Property Restriction</u>: \exists cmns-col;compliesWith.FormalLanguage</p>
ConceptSystem (concept system)	<p><u>Definition</u>: set of concepts structured in one or more related domains according to the concept relations among its concepts</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.28</p>	<p><u>Parent Class</u>: cmns-col;StructuredCollection</p> <p><u>Property Restriction</u>: \exists cmns-col:comprises.mvf:MVFEntry</p> <p><u>Property Restriction</u>: \exists cmns-cxtdsg:isUsedBy.Domain</p>
Definition (definition)	<p><u>Definition</u>: representation of a concept by an expression that describes it and differentiates it from related concepts</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.3.1</p>	<p><u>Parent Class</u>: cmns-cls:Aspect</p> <p><u>Property Restriction</u>: \exists cmns-dsg:defines.mvf:MVFEntry</p>
DelimitingCharacteristic (delimiting characteristic)	<p><u>Definition</u>: essential characteristic used for distinguishing a concept from related concepts</p> <p><u>Example</u>: The delimiting characteristic ‘support for the back’ may be used for distinguishing the concepts stool and chair.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.5</p>	<p><u>Parent Class</u>: EssentialCharacteristic</p>
DeprecatedTerm (deprecated term)	<p><u>Definition</u>: term which is a synonym for a preferred term, but rated according to the acceptability rating scale as undesired</p> <p><u>Example</u>: With regard to the concept ‘terminology science’, ‘terminology’ is a deprecated term, whereas ‘terminology science’ is the preferred term, and ‘terminology studies’ is an admitted term.</p> <p><u>Note</u>: There can be more than one deprecated term. By analogy, ‘deprecated’ can also apply to appellations, proper names and symbols.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.21</p>	<p><u>Parent Class</u>: RatedTerm</p> <p><u>Property Restriction</u>: hasAcceptabilityRating.deprecated</p>
Diagram (diagram)	<p><u>Definition</u>: two-dimensional geometric,</p>	<p><u>Property Restriction</u>: \exists depicts.owl:Thing</p>

	symbolic representation of information that shows the appearance, structure, or workings of something	
Domain (domain)	<p><u>Definition</u>: field of special knowledge</p> <p><u>Scope note</u>: The borderlines and the granularity of a domain are determined from a purpose-related point of view. If a domain is subdivided, the result is again a domain.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.1.4</p>	<p><u>Parent Class</u>: cmns-cxtmsg:Context</p> <p><u>Property Restriction</u>: ≥ 0 cmns-cxtmsg:uses.SpecialLanguage</p>
EssentialCharacteristic (essential characteristic)	<p><u>Definition</u>: characteristic of a concept that is indispensable to understand that concept</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.3</p>	<p><u>Parent Class</u>: cmns-cl:Aspect</p> <p><u>Property Restriction</u>: \exists cmns-cl:characterizes.mvf:MVEntry</p>
ExtensionalDefinition (extensional definition)	<p><u>Definition</u>: definition that enumerates the objects to which a concept corresponds under one criterion of subdivision</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.1.2, 3.3.3</p>	<p><u>Parent Class</u>: Definition, cmns-col:Collection</p> <p><u>Property Restriction</u>: \exists cmns-col:comprises.Object</p> <p><u>Property Restriction</u>: ≥ 0 cmns-cl:isCharacterizedBy.cmns-cl:Aspect</p>
FormalLanguage (formal language)	<p><u>Definition</u>: language whose rules are explicitly established before its use</p> <p><u>Example</u>: Web Ontology Language (OWL); the structured English informative language that is specified in the Semantics For Business Vocabulary and Rules (SBVR) Specification</p> <p><u>Note</u>: A formal language is a collection of expressions, following formal rules of well-formedness. See the Distributed Ontology, Model, and Specification Language (DOL) specification for additional criteria and classification, available at https://www.omg.org/spec/DOL/.</p> <p><u>Scope note</u>: The purpose of formal language is to assure exact communication of information.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.1.10</p>	<p><u>Parent Class</u>: lcc-lr:Language</p>
GeneralConcept (general concept)	<p><u>Definition</u>: concept that corresponds to a potentially unlimited number of objects which form a group by reason of shared properties</p> <p><u>Example</u>: Examples of general concepts are 'planet', 'tower', 'Nobel Prize in Physics', 'moon'.</p>	<p><u>Parent Class</u>: mvf:MVEntry</p> <p><u>Class Axiom</u>: \neg Individual Concept</p>

	<p><u>Note</u>: For a general concept it is essential that a number of corresponding objects greater than 1 can be perceived or conceived of. For example ‘spaceship’ has been a general concept before such a material object existed, at the time when there existed only 1 such object, and later, when there existed several such objects.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.9</p>	
GeneralLanguage (general language)	<p><u>Definition</u>: natural language characterized by the use of linguistic means of expression independent of any specific domain</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.1.8</p>	<u>Parent Class</u> : lcc-lr:NaturalLanguage
GenericExtensionalDefinition (generic extensional definition)	<p><u>Definition</u>: extensional definition that enumerates all the specific concepts of a generic concept under one criterion of subdivision on the same hierarchical level</p> <p><u>Example</u>: noble gas - helium, neon, argon, krypton, xenon or radon</p> <p><u>Note</u>: A generic extensional definition is based on a generic relation, and the enumeration ends with the operator ‘or’; [i.e., a disjoint union of the subordinate concepts].</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.3.4</p>	<u>Parent Class</u> : ExtensionalDefinition
IndividualConcept (individual concept)	<p><u>Definition</u>: concept that corresponds to a unique object</p> <p><u>Example</u>: Examples of individual concepts are ‘Saturn’, ‘Eiffel Tower’, ‘Moon’, ‘serial number FRHR603928’, ‘2016 Nobel Prize in Physics’.</p> <p><u>Note</u>: Individual concepts are represented by proper names. In a UML model or similar context, an individual concept corresponds to a singleton class.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.8</p>	<u>Parent Class</u> : mvf:MVFEntry
Initialism (initialism)	<p><u>Definition</u>: abbreviation that is made up of the initial letters of the components of the full form of a term or proper name or from syllables of the full form and that is pronounced letter by letter</p> <p><u>Example</u>: Examples of initialisms are: UN, ASTM, IEC, US, EU, DNA</p> <p><u>Source</u>: ISO 1087 Terminology work and</p>	<u>Parent Class</u> : mvf:Abbreviation

	terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.16	
IntentionalDefinition (intentional definition)	<p><u>Definition</u>: definition that conveys the intension of a concept by stating the immediate generic concept and its characteristics, including any delimiting characteristic(s)</p> <p><u>Example</u>: mechanical mouse: computer mouse in which movements are detected by rollers and a ball</p> <p><u>Example</u>: optical mouse: computer mouse in which movements are detected by light sensors</p> <p><u>Note</u>: Intensional definitions are preferable to other types of definitions because they clearly reveal the characteristics of a concept within a concept system: they should be used whenever possible.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.2.6, 3.3.2</p>	<p><u>Parent Class</u>: Definition</p> <p><u>Property Restriction</u>: \forall hasDelimitingCharacteristic.DelimitingCharacteristic</p> <p><u>Property Restriction</u>: \exists cmns-col:comprises.cmns-cls:Aspect</p>
NewTerm (new term)	<p><u>Definition</u>: term that is specifically coined for a given general concept</p> <p><u>Example</u>: smartwatch</p> <p><u>Note</u>: A new term may supersede an older term or may designate a new concept.</p> <p><u>Synonym</u>: neonym</p> <p><u>Synonym</u>: neoterm</p> <p><u>Synonym</u>: terminological neologism</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.12</p>	<u>Parent Class</u> : Term
NonEssentialCharacteristic (non-essential characteristic)	<p><u>Definition</u>: characteristic of a concept that is not indispensable to understand that concept</p> <p><u>Example</u>: For defining the concept 'traffic light', the color 'red', 'green' or 'amber' is an essential characteristic, while for defining the concept 'computer mouse', the color (e.g. 'ivory', 'blue' or 'red') is a non-essential characteristic.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.4</p>	<u>Parent Class</u> : cmns-cls:Aspect
Object (object)	<p><u>Definition</u>: anything perceivable or conceivable</p> <p><u>Note</u>: Objects may be material (e.g. an engine, a sheet of paper, a diamond), immaterial (e.g. conversion ratio, a project plan) or imagined (e.g. a unicorn). Objects correspond to individuals in an ontology,</p>	<u>Property Restriction</u> : ≥ 0 cmns-cls:isCharacterizedBy.cmns-cls:Aspect

	<p>instances in many programming languages.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.1.1</p>	
ObsoleteTerm (obsolete term)	<p><u>Definition</u>: term which is no longer in common use</p> <p><u>Note</u>: By analogy, ‘obsolete’ can also apply to appellations, proper names and symbols.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.22</p>	<p><u>Parent Class</u>: RatedTerm</p> <p><u>Property Restriction</u>: hasAcceptabilityRating.obsolete</p>
PartitiveExtensionalDefinition (partitive extensional definition)	<p><u>Definition</u>: extensional definition that enumerates all the partitive concepts of a comprehensive concept on the same hierarchical level</p> <p><u>Example</u>: Family 18 in the Periodic Table: helium, neon, argon, krypton, xenon and radon.</p> <p><u>Note</u>: A partitive extensional definition is based on a partitive relation, and the enumeration ends with the operator ‘and’; [<i>i.e.</i>, a union that is disjoint and covering of all parts of the whole].</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.3.5</p>	<p><u>Parent Class</u>: ExtensionalDefinition</p>
PreferredTerm (preferred term)	<p><u>Definition</u>: term rated according to the acceptability rating as the primary term for a given concept</p> <p><u>Example</u>: With regard to the concept ‘terminology science’, the preferred term is ‘terminology science’, whereas ‘terminology studies’ is an admitted term, and ‘terminology’ is a deprecated term.</p> <p><u>Note</u>: By analogy, ‘preferred’ can also apply to appellations, proper names and symbols.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.19</p>	<p><u>Parent Class</u>: RatedTerm</p> <p><u>Property Restriction</u>: hasAcceptabilityRating.preferred</p>
ProperName (proper name)	<p><u>Definition</u>: designation that represents an individual concept</p> <p><u>Example</u>: ‘International Organization for Standardization’, ‘IBM®’, ‘British Isles’, ‘United Nations’</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.4</p>	<p><u>Parent Class</u>: cmns-dsg:Name</p>
RatedTerm (rated term)	<p><u>Definition</u>: term rated according to an acceptability rating scale that allows for designations to be placed in order of</p>	<p><u>Parent Class</u>: Term</p>

	<p>preference as a guide to users</p> <p><u>Note:</u> The following ratings are common: preferred term, admitted term, deprecated term.</p>	<p><u>Property Restriction:</u> = 1 hasAcceptabilityRating</p>
ShortForm (short form)	<p><u>Definition:</u> abbreviated form for a very long complex term or appellation, using fewer words to designate the same concept</p>	<p><u>Parent Class:</u> mvf:Abbreviation</p>
SimpleTerm (simple term)	<p><u>Definition:</u> term that consists of a single word or lexical unit</p> <p><u>Example:</u> Examples of simple terms are: sound, light, barrier, accessory, accessorize, virus, viral.</p> <p><u>Synonym:</u> single word term</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.6, 3.4.7</p>	<p><u>Parent Class:</u> Term</p>
SpecialLanguage (special language)	<p><u>Definition:</u> natural language used in communication between experts in a domain and characterized by the use of specific linguistic means of expression</p> <p><u>Scope note:</u> The specific linguistic means of expression always include domain-specific terminology and phraseology and also can cover stylistic or syntactic features.</p> <p><u>Synonym:</u> LSP</p> <p><u>Synonym:</u> language for special purposes</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.1.9</p>	<p>Parent Class: lcc-lr:NaturalLanguage, ConceptSystem</p> <p><u>Property Restriction:</u> \exists cmns-cxtsdg;isUsedBy (Domain \cup Subject)</p>
Subject (subject)	<p><u>Definition:</u> area of interest or expertise</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.1.5</p>	<p><u>Parent Class:</u> cmns-cxtsdg:Context</p>
Symbol (symbol)	<p><u>Definition:</u> designation that represents a concept by non-linguistic means</p> <p><u>Note:</u> From section 7.5, ISO 704, symbols are an important aid to international communication because their visual representation of concepts functions independently of any given language. They can communicate information directly under difficult circumstances (<i>e.g.</i>, traffic signs).</p> <p>Iconic symbols should bear some visual resemblance to the concept they represent. Generally their meaning should be directly apparent without explanation. In some cases, however, the visual resemblance of the symbol is less pronounced or completely lost. Its meaning may be no longer directly</p>	<p><u>Parent Class:</u> cmns-dsg:Designation, mvf:VocabularyEntry</p>

	<p>recognizable and may be supported only by general agreement.</p> <p>Terms using the letters of the alphabet as iconic symbols to communicate the shape of the letter itself rather than its sound shall not be considered a symbol.</p> <p>Characters that replace words or parts of words, such as mathematical symbols or currency symbols, are considered symbols.</p> <p><u>Note</u>: There are several types of symbols such as graphical symbols (ISO 3864, all parts) and letter symbols (ISO 80000, all parts).</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.5</p>	
Term (term)	<p><u>Definition</u>: verbal designation of a general concept in a specific subject field</p> <p><u>Note</u>: A term may contain symbols and can have variants, e.g. different forms of spelling.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.2</p>	<u>Parent Class</u> : cmns-dsg:Designation, mvf:VocabularyEntry
mvf:Abbreviation	<u>Synonym</u> : abbreviated form	<u>Parent Class</u> : Term
mvf:MVFEntry	<u>Synonym</u> : concept	<p><u>Property Restriction</u>: ≥ 0 cmns-cl:isCharacterizedBy.cmns-cl:Aspect</p> <p><u>Property Restriction</u>: ≥ 0 cmns-dsg:isDefinedIn.Definition</p> <p><u>Class Axiom</u>: \equiv (GeneralConcept \cup Individual Concept)</p>
mvf:VocabularyEntry		<p><u>Property Restriction</u>: ≥ 0 cmns-dsg:isDefinedIn.Definition</p> <p><u>Property Restriction</u>: ≥ 0 cmns-dsg:denotes.mvf:MVFEntry</p>

Properties

Name	Annotations	Property Axioms
associates (associates)	<p><u>Definition</u>: relates two concepts having a non-hierarchical, thematic connection by virtue of experience</p> <p><u>Example</u>: An associative relation exists between the concepts education and teaching, baking and oven.</p> <p><u>Note</u>: Associative relations are evidence that the terms are semantically or conceptually associated to the degree that it is important to make the connection explicit, on the grounds that</p>	<p><u>Type</u>: owl:SymmetricProperty</p> <p><u>Parent Property</u>: cmns-col:isRelatedTo</p>

	it may suggest additional terms for use in indexing or retrieval. <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.23	
causes (causes)	Definition : makes something happen or gives rise to some action, condition, or phenomenon as a consequence <u>Example</u> : A causal relation exists between the concepts action and reaction, nuclear explosion and fall-out. <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.2.27	<u>Parent Property</u> : associates
depicts (depicts)	<u>Definition</u> : illustrates via an image	<u>Parent Property</u> : cmns-dsg:describes
extends (extends)	<u>Definition</u> : supplements or augments	<u>Parent Property</u> : cmns-col:isRelatedTo
hasAcceptabilityRating (has acceptability rating)	<u>Definition</u> : relates to a rating indicating its status with respect to the vocabulary	<u>Parent Property</u> : cmns-dsg:sDescribedBy
hasAntonym (has antonym)	<u>Definition</u> : relates a designation to another representing a coordinate concept viewed as its logical complement or opposite <u>Example</u> : Antonymy exists between the terms encoding and decoding, positive and negative. <u>Note</u> : Designations in the relation of antonymy are called 'antonyms'. <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.25	<u>Type</u> : owl:SymmetricProperty <u>Parent Property</u> : associates
hasDelimitingCharacteristic (has delimiting characteristic)	<u>Definition</u> : indicates a defining feature of <u>Note</u> : A delimiting characteristic is a necessary condition for class membership.	<u>Parent Property</u> : cmns-cl:isCharacterizedBy
hasExtension (has extension)	<u>Definition</u> : specifies something that supplements this entity	<u>Parent Property</u> : cmns-col:isRelatedTo <u>Inverse</u> : extends
hasHomonym (has homonym)	<u>Definition</u> : relates a designation to another that has common spelling and pronunciation but represents a different concept, <i>i.e.</i> , has different meaning and origin <u>Example</u> : The term 'bark' represents three unrelated concepts: 1) the concept 'bark' corresponding to certain vocal repertoires of dogs; 2) the concept 'bark' corresponding to the outside coverings of stems of woody plants; 3) the concept 'bark' corresponding to some sailing vessels. <u>Note</u> : Designations in the relation of homonymy are called 'homonyms'. <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.29	<u>Type</u> : owl:SymmetricProperty <u>Parent Property</u> : associates
hasIntension (has intension)	<u>Definition</u> : specifies something that explains the entity in terms of meaning	<u>Parent Property</u> : cmns-col:isRelatedTo

hasMononym (has mononym)	<p><u>Definition:</u> has as its singular (only) designation</p> <p><u>Note:</u> Mononymic relations between a concept and a term (designation, vocabulary entry) in a given language are those in which a given concept has only one designation. Designations in the relation of mononymy are called 'mononyms'.</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.26</p>	<p><u>Parent Property:</u> associates, cmns-dsg:isSignifiedBy</p>
hasSuperordinateConcept (has superordinate concept)	<p><u>Definition:</u> indicates a broader, ancestral concept</p> <p><u>Synonym:</u> is narrower transitive than</p>	<p><u>Type:</u> owl:TransitiveProperty</p> <p><u>Parent Property:</u> mvf:hasBroaderEntry</p>
hasSynonym (has synonym)	<p><u>Definition:</u> relates a vocabulary entry (designation) to another in a given natural language representing the same concept</p> <p><u>Example:</u> Synonymy exists between 'deuterium' and 'heavy hydrogen', between 'United Nations' and 'UN'.</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.23</p>	<p><u>Type:</u> owl:SymmetricProperty</p> <p><u>Parent Property:</u> associates</p>
isCausedBy (is caused by)	<p><u>Definition:</u> is a consequence of</p>	<p><u>Parent Property:</u> associates</p> <p><u>Inverse:</u> causes</p>
isCoordinateWith (is coordinate with)	<p><u>Definition:</u> indicates a concept that results from the same criterion of subdivision as another subordinate concept with the same immediate superordinate [parent] concept</p> <p><u>Example:</u> Applying 'layer of clothing' as a criterion of subdivision to 'clothing' yields 'outerwear' and 'underwear' as specific concepts. These concepts are coordinate concepts in relation to their generic concept 'clothing'.</p> <p><u>Example:</u> For the concept system 'computer mouse' according to ISO 704:2009, 5.5.2.2.1, Example 4 the type of characteristic 'computer connection' is used as a criterion of subdivision to divide the generic concept 'computer mouse' into specific concepts such as 'cord mouse' and 'cordless mouse'.</p> <p><u>Example:</u> For the concept system 'computer' the type of characteristic 'function' is used as a criterion of subdivision to divide the comprehensive concept 'computer' into partitive concepts such as 'main board', 'display adapter', 'power supply', 'storage device' and 'input device'.</p> <p><u>Example:</u> For the concept system 'safety sign' according to ISO 3864-1:2011, 5, Table 1, the type of characteristic 'geometric shape' is used as a criterion of subdivision to divide the generic concept 'safety sign' into specific concepts such as 'mandatory action sign' and 'safe condition sign'.</p> <p><u>Note:</u> A criterion of subdivision is a type of characteristic [aspect] according to which a superordinate concept is divided into subordinate concepts.</p> <p><u>Synonym:</u> is a sibling of</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.2.17, 3.2.18</p>	<p><u>Parent Property:</u> cmns-col:isRelatedTo</p>
isDepictionOf (is depiction of)	<p><u>Definition:</u> is an illustration of</p>	<p><u>Parent Property:</u> cmns-</p>

		dsg:isDescribedBy <u>Inverse</u> : depicts
isManagedBy (is managed by)	<u>Definition</u> : indicates an entity that administers, oversees, and potentially maintains or operates it	<u>Parent Property</u> : cmns-col:isRelatedTo
isMonosemeFor (is monoseme for)	<u>Definition</u> : is the sole designation for <u>Note</u> : Designations in the relation of monosemy are called 'monosemes'. <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.27	<u>Parent Property</u> : cmns-dsg:denotes, associates
isPolysemeFor (is polyseme for)	<u>Definition</u> : relates a designation to more than one concept for which it has a different sense (meaning) <u>Example</u> : The term 'bridge' represents three concepts that are related in form and/or function: 1) the concept 'bridge' corresponding to structures to carry traffic over a gap; 2) the concept 'bridge' corresponding to certain wooden parts of string instruments; 3) the concept 'bridge' corresponding to dental plates. <u>Note</u> : Designations in the relation of polysemy are called 'polysemes'. <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.28	<u>Parent Property</u> : cmns-dsg:denotes, associates
manages (manages)	<u>Definition</u> : administers, oversees and possibly maintains and/or operates	<u>Parent Property</u> : cmns-col:isRelatedTo <u>Inverse</u> : isManagedBy

9.3 Ontology: ISO 1087 – Terminology Science

This component of the MVF ontology consists of an extension that incorporates additional vocabulary from ISO 1087 for terminology science.

MVF also reuses several ontologies from the OMG Commons Ontology Library for specific patterns, including designations, collections, and classifiers.

Metadata for the ISO 1087 – Terminology Science ontology is given in Table 9.5.

Table 9.5: ISO 1087 – Terminology Science Ontology Metadata

Metadata Term	Value
OntologyIRI	https://www.omg.org/spec/MVF/ISO1087-TerminologyScience/
rdfs:label	Multiple Vocabulary Facility (MVF) Terminologies Ontology
dct:abstract	The MVF ontology consists of three components: <ul style="list-style-type: none"> - a core ontology corresponding to the MVF metamodel, - an extension representing the subset of the ISO 1087 reference vocabulary used in other ISO standards for vocabulary representation, - an extension that incorporates additional vocabulary

	from ISO 1087 for terminology science. MVF also reuses several ontologies from the OMG Commons library for specific patterns, including designations, collections, and classifiers (this ontology).

skos:note	Note that the set of ontologies provided for MVF do not provide exhaustive coverage of ISO 1087. We have not incorporated the terms related to data validation or natural language processing in the latest version of the standard, and certain classes under the heading of concept relation in the standard are handled as properties herein.

Figure 9, below, covers the terminology resource class hierarchy for the terminology science ontology as well as various arrangements specifying how the contents of a terminology resource might be organized.

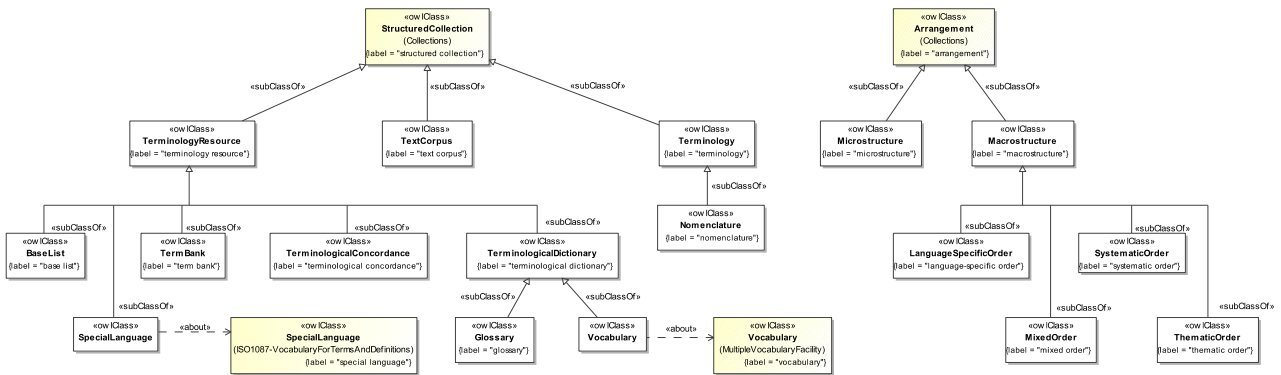

Figure 9: ISO 1087 Terminology Resource Class Hierarchy

Figure 10 provides an overview of other elements related to terminology science.

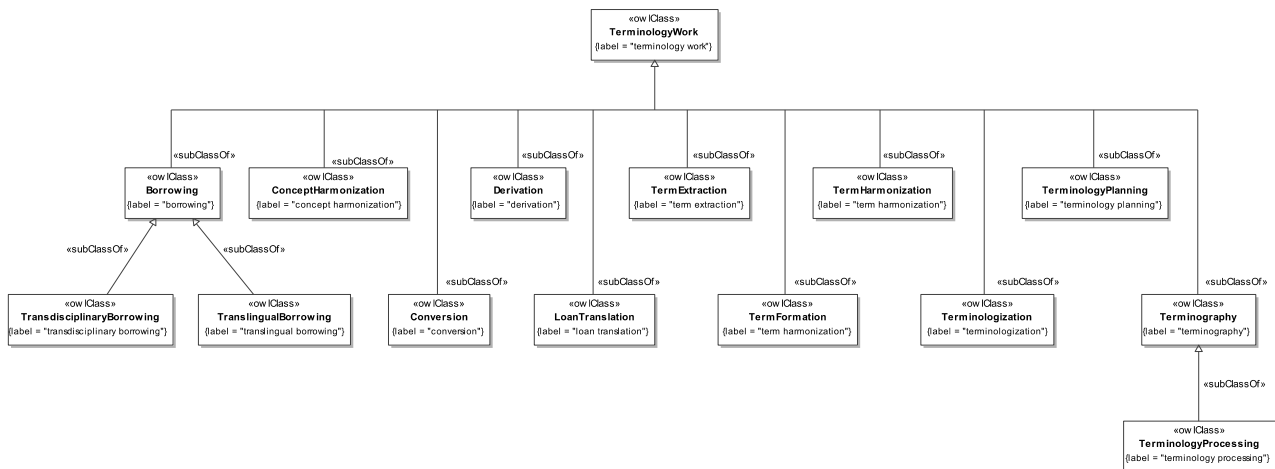

Figure 10: ISO 1087 Terminology Work Class Hierarchy

The detailed annotations and axioms that comprise the ISO 1087 – Terminology Science ontology are provided in Table 9.6, below.

Table 9.6: ISO 1087 – Terminology Science Ontology Details

Classes

Name	Annotations	Class Expressions
cmns-col:StructuredCollection	<u>Example</u> : collection of artifacts, books, periodicals, artwork, terms, or other objects that form the core basis for a vocabulary, exhibit, library, or other organization	<u>Property Restriction</u> : ≥ 0 cmns-col:hasArrangement.Macrostructure
BaseList (base list)	<u>Definition</u> : list of designations resulting from term extraction <u>Note</u> : A base list usually gives rise to further terminology work. <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.5.7	<u>Parent Class</u> : TerminologyResource <u>Property Restriction</u> : \exists cmns-col:comprises cmns-dsg:Designation
Borrowing (borrowing)	<u>Definition</u> : method for the formation of designations in which a designation is adopted from another natural language or another domain or subject <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.32	<u>Parent Class</u> : TerminologyWork
ConceptHarmonization (concept harmonization)	<u>Definition</u> : terminology work aimed at the establishment of a correspondence between two or more closely related or overlapping concepts to eliminate or reduce minor differences between them <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second	<u>Parent Class</u> : TerminologyWork

	edition, 2019-09, clauses 3.5.4	
Conversion (conversion)	<p><u>Definition:</u> method for the formation of designations in which the syntactic category of an existing word or lexical unit is changed</p> <p><u>Example:</u> The conversion of 'constant' as an adjective to 'constant' as a noun in the domain of mathematics; the conversion of 'output' as a noun to 'output' as a verb in the domain of economics.</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.39</p>	<u>Parent Class:</u> TerminologyWork
DataCategory (data category)	<p><u>Definition:</u> specification of a type of terminological data that is used for structuring terminological entries or terminology resources</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.6.3</p>	<u>Parent Class:</u> cmns-cls:Classifier
Derivation (derivation)	<p><u>Definition:</u> method for the formation of designations in which a designation is formed by adding one or more morphological elements to a word or lexical unit</p> <p><u>Example:</u> Terms formed by derivation: 'printer' (print -er), 'disassembly' (assemble dis- -y), 'hormonal' (hormon -al).</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.38</p>	<u>Parent Class:</u> TerminologyWork
Glossary (glossary)	<p><u>Definition:</u> terminological dictionary that contains designations from one or more domains or subjects together with equivalents in one or more natural languages</p> <p><u>Note:</u> In English common language usage, glossary can refer to a monolingual list of designations and definitions in a domain or subject.</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.6</p>	<u>Parent Class:</u> TerminologicalDictionary
LanguageSpecificOrder (language-specific order)	<p><u>Definition:</u> macrostructure in which the terminological entries reflect the ordering conventions specific to a given natural language or script</p> <p><u>Note:</u> Alphabetical order in a monolingual terminology resource.</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.12</p>	<u>Parent Class:</u> Macrostructure
LoanTranslation (loan translation)	<p><u>Definition:</u> method for the formation of designations in which the elements of a</p>	<u>Parent Class:</u> TerminologyWork

	<p>designation in another natural language are translated literally into the recipient language</p> <p><u>Example:</u> Loan translations in English are 'flea market' (from French marché aux puces), 'loan translation' (from German Lehnübersetzung).</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.35</p>	
Macrostructure (macrostructure)	<p><u>Definition:</u> selection and arrangement of terminological entries in a collection</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.8</p>	<u>Parent Class:</u> cmns-col:Arrangement
Microstructure (microstructure)	<p><u>Definition:</u> selection and arrangement of terminological data in each terminological entry of a collection</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.9</p>	<u>Parent Class:</u> cmns-col:Arrangement
MixedOrder (mixed order)	<p><u>Definition:</u> macrostructure which is a combination of systematic order, thematic order, and language-specific order</p> <p><u>Synonym:</u> mixed arrangement</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.13</p>	<u>Parent Class:</u> Macrostructure
Nomenclature (nomenclature)	<p><u>Definition:</u> terminology structured systematically according to pre-established naming rules</p> <p><u>Example:</u> International Code of Virus Classification and Nomenclature</p> <p><u>Note:</u> Nomenclatures have been elaborated in various domains (3.1.4), such as biology, medicine, and chemistry.</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.7</p>	<p><u>Parent Class:</u> Terminology</p> <p><u>Property Restriction:</u> \exists cmns-col:hasArrangement.SystematicOrder</p>
SystematicOrder (systematic order)	<p><u>Definition:</u> macrostructure in which the terminological entries reflect the underlying concept system</p> <p><u>Synonym:</u> systematic arrangement</p> <p><u>Source:</u> ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.10</p>	<u>Parent Class:</u> Macrostructure
TermBank (term bank)	<p><u>Definition:</u> collection of terminology databases including the organizational framework for recording, processing and disseminating terminological data</p>	<p><u>Parent Class:</u> TerminologyResource</p> <p><u>Property Restriction:</u> \exists cmns-col:comprises.TerminologicalDatabase</p>

	<p><u>Synonym</u>: terminological data bank</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.3</p>	
TermExtraction (term extraction)	<p><u>Definition</u>: terminology work that involves the identification and excerption of terminological data by searching through a text corpus</p> <p><u>Note</u>: Term extraction is often supported by dedicated software tools.</p> <p><u>Note</u>: Terminological data of primary interest are typically designations, definitions and contexts.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.5.6</p>	<p><u>Parent Class</u>: TerminologyWork</p> <p><u>Property Restriction</u>: ∃ produces.BaseList</p> <p><u>Property Restriction</u>: ∃ produces.TerminologicalConcordance</p> <p><u>Property Restriction</u>: ∃ reflects.TextCorpus</p>
TermFormation (term formation)	<p><u>Definition</u>: terminology work aimed at creating new terms using one or more of a variety of methods</p> <p><u>Note</u>: By analogy, 'term formation' can apply also to appellations, proper names and symbols.</p> <p><u>Note</u>: Methods of term formation may among others include transdisciplinary borrowing, translingual borrowing, loan translation, transliteration, transcription, derivation, or conversion, the creation of abbreviations or blends.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.4.31</p>	<p><u>Parent Class</u>: TerminologyWork</p>
TermHarmonization (term harmonization)	<p><u>Definition</u>: terminology work leading to the selection of designations for harmonized concepts either in different natural languages or within the same natural language</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.5.5</p>	<p><u>Parent Class</u>: TerminologyWork</p>
Terminography (terminography)	<p><u>Definition</u>: terminology work aimed at creating and maintaining terminology resources</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.5.5</p>	<p><u>Parent Class</u>: TerminologyWork</p>
TerminologicalConcordance (terminological concordance)	<p><u>Definition</u>: list of designations extracted from a text corpus together with a context and a source reference</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.5.8</p>	<p><u>Parent Class</u>: TerminologyResource</p> <p><u>Property Restriction</u>: ≥ 0 cmns-cxtmsg:isApplicableIn.cmns-cxtmsg:Context</p> <p><u>Property Restriction</u>: ∃ cmns-col:comprises.cmns-dsg;Designation</p> <p><u>Property Restriction</u>: ∃ reflects.TextCorpus</p>
TerminologicalDatabase	<p><u>Definition</u>: database comprising a terminology</p>	<p><u>Parent Class</u>: cmns-</p>

(terminological database)	<p>resource</p> <p><u>Synonym</u>: termbase</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.7.2</p>	<p>col;StructuredCollection</p> <p><u>Property Restriction</u>: \forall mvf-trm;isManagedBy.TermBank</p> <p><u>Property Restriction</u>: \forall cmns-col:comprises.TerminologyResource</p>
TerminologicalDictionary (terminological dictionary)	<p><u>Definition</u>: terminology resource that is designed to be used as a reference work</p> <p><u>Abbreviation</u>: LSP dictionary</p> <p><u>Synonym</u>: special-language dictionary</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.7.4</p>	<p><u>Parent Class</u>: TerminologyResource</p> <p><u>Property Restriction</u>: \exists cmns-col:comprises.mvf:VocabularyEntry</p> <p><u>Property Restriction</u>: \exists cmns-col:hasArrangement.Macrostructure</p> <p><u>Property Restriction</u>: \exists cmns-cxtmsg:uses.mvf-trm;SpecialLanguage</p>
Terminologization (terminologization)	<p><u>Definition</u>: process by which a general language word or lexical unit is being used more and more as a term in a specific domain or subject</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.30</p>	<p><u>Parent Class</u>: TerminologyWork</p> <p><u>Property Restriction</u>: \exists produces.mvf-trm:Term</p>
Terminology (terminology)	<p><u>Definition</u>: set of designations and concepts belonging to one domain or subject</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.1.11</p>	<p><u>Parent Class</u>: cmns-col;StructuredCollection</p> <p><u>Property Restriction</u>: $= 1$ cmns-cxtmsg;isUsedBy (mvf-trm:Domain \cup mvf-trm:Subject)</p> <p><u>Property Restriction</u>: \exists cmns-col:comprises.cmns-dsg;Designation</p> <p><u>Property Restriction</u>: \exists cmns-col:comprises.mvf;MVFEntry</p>
TerminologyPlanning (terminology planning)	<p><u>Definition</u>: terminology work aimed at developing, improving, implementing and disseminating the terminology of a domain or subject</p> <p><u>Note</u>: Terminology planning involves all aspects of terminology work and has among other objectives the objective of achieving vocabulary control through such normative documents as thesauri and terminology standards.</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.5.3</p>	<p><u>Parent Class</u>: TerminologyWork</p>
TerminologyProcessing (terminology processing)	<p><u>Definition</u>: part of terminography concerned with computer aspects of database creation, maintenance and extraction of terminology from texts</p> <p><u>Source</u>: ISO 1087-1, paragraph 3.6.3</p>	<p><u>Parent Class</u>: Terminography</p>
TerminologyResource (terminology resource)	<p><u>Definition</u>: collection of terminological entries</p> <p><u>Note</u>: Terminology resources may be in paper or electronic format, e.g. paper dictionaries or</p>	<p><u>Parent Class</u>: cmns-col;StructuredCollection</p>

	<p>glossaries, CDs, DVDs, databases or term banks.</p> <p><u>Abbreviation</u>: TDC</p> <p><u>Synonym</u>: terminological data collection</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.7.1</p>	<p><u>Property Restriction</u>: \exists cmns-col:comprises.mvf:VocabularyEntry</p>
TerminologyScience (terminology science)	<p><u>Definition</u>: science studying terminologies, aspects of terminology work, the resulting terminology resources, and terminological data</p> <p><u>Synonym</u>: terminology studies</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.1.12</p>	<p>Parent Class: mvf-trm;Domain</p>
TerminologyWork (terminology work)	<p><u>Definition</u>: work concerned with the systematic collection, description, processing and presentation of concepts and their designations</p> <p><u>Note</u>: Terminology work often aims at creating and maintaining terminology resources.</p> <p><u>Note</u>: Terminology work often aims at terminology planning and can involve all of concept harmonization, term harmonization, and term formation.</p> <p><u>Synonym</u>: terminology management</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.5.1</p>	
TextCorpus (text corpus)	<p><u>Definition</u>: collection of natural language data</p> <p><u>Synonym</u>: corpus</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.6.4</p>	<p>Parent Class: cmns-col:StructuredCollection</p>
ThematicOrder (thematic order)	<p><u>Definition</u>: macrostructure in which the terminological entries are grouped in accordance with a relational theme</p> <p><u>Note</u>: In a human resource vocabulary, one group of terminological entries relates to recruitment processes, while another group relates to employee assessment.</p> <p><u>Synonym</u>: thematic arrangement</p> <p><u>Source</u>: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.11</p>	<p>Parent Class: Macrostructure</p>
TransdisciplinaryBorrowing (transdisciplinary borrowing)	<p><u>Definition</u>: borrowing from another domain or subject</p> <p><u>Example</u>: The term 'virus' was originally used in biology and later transferred to information technology.</p>	<p>Parent Class: Borrowing</p>

	<u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.33	
TranslingualBorrowing (translingual borrowing)	<u>Definition</u> : borrowing from another natural language <u>Example</u> : An example of a direct borrowing into English is the French term 'calque'. <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.34	<u>Parent Class</u> : Borrowing
mvf-trm;SpecialLanguage		<u>Parent Class</u> : TerminologyResource
mvf;Vocabulary	<u>Note</u> : A vocabulary is a terminological dictionary that contains designations and definitions from one or more domains or subjects. <u>Note</u> : A vocabulary may be monolingual, bilingual or multilingual. A vocabulary is a terminological dictionary that contains designations (vocabulary entries) and definitions from one or more specific subject fields. <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.7.5	<u>Parent Class</u> : TerminologicalDictionary <u>Property Restriction</u> : ≥ 0 cmns-id:isIdentifiedBy.lcc-cr:GeographicRegionIdentifier
mvf;VocabularyEntry	<u>Note</u> : A terminological entry prepared in accordance with the principles and methods given in ISO 704 follows the same structural principles whether it is monolingual or multilingual. <u>Note</u> : From a terminology perspective, a vocabulary entry is a collection of terminological data related to only one concept. <u>Explanatory note</u> : Notes on vocabulary entries can be represented using the skos:note annotation or any of its subproperties or other annotations as appropriate. <u>Synonym</u> : terminological entry <u>Source</u> : ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clause 3.6.2	<u>Property Restriction</u> : ≥ 0 cmns-col:hasArrangement.Microstructure <u>Property Restriction</u> : ≥ 0 cmns-cxtsg:isApplicableIn.mvf-trm;Subject

Properties

Designations lacking transparency are called 'unmotivated' designations.</p> <p>Source: ISO 1087 Terminology work and terminology science - Vocabulary, Second edition, 2019-09, clauses 3.4.40</p>	Parent Property: informs
produces (produces)	<p>Definition: causes something to exist, makes something available, manufactures</p>	Parent Property: mvf-trm;associates
reflects (reflects)	<p>Definition: makes manifest or apparent, shows</p>	Parent Property: cmns-col:isRelatedTo
studies (studies)	<p>Definition: application of the mental faculties to the acquisition of knowledge</p> <ul style="list-style-type: none"> - such application in a particular field or to a specific subject - careful or extended consideration - a careful examination or analysis of a phenomenon, development, or question 	

9.4 Ontology: MVF to SKOS-XL Mapping Ontology

This ontology provides a mapping from the concepts defined in MVF to the Simple Knowledge Organization System (SKOS-XL) W3C Recommendation.

Metadata for the MVF to SKOS Mapping ontology is given in Table 9.7.

Table 9.7: MVF to SKOS Mapping Ontology Metadata

10. MVF Vocabulary Services

Conceptually, MVF works with “concepts” (mvf:MVFEntry), organized into Dictionaries (mvf:MVFDictionary) and related “terms” (mvf:VocabularyEntry), organized into “vocabularies” (mvf:Vocabulary). APIs to construct, publish and query knowledge bases of this kind are typically managed by Terminology Services. OMG’s Common Terminology Services (CTS-2)¹ specification and HL7’s FHIR Terminology² specification are both well-established candidates in this space. Note that despite the domain focus, the FHIR terminology specification is not healthcare specific.

Architecturally, a component that implements a terminology API could either be embedded in a modeling tool, or could be specified as an independent service for a modeling tool to interface with.

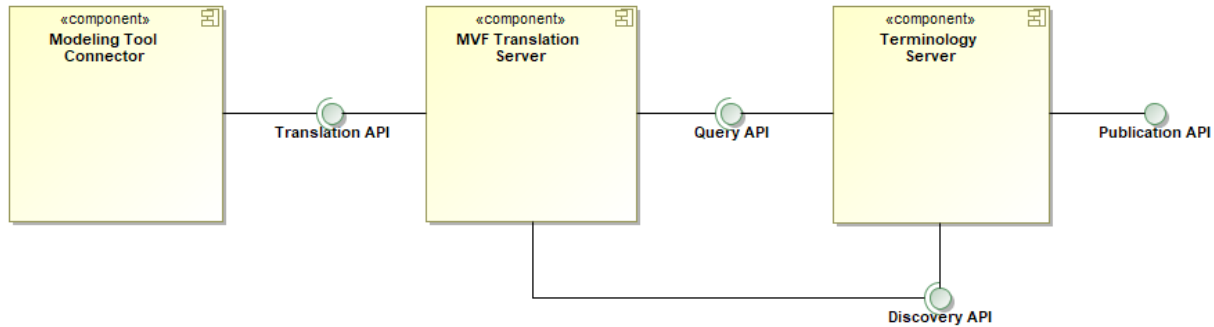

Figure 11: Notional Component / Interface Integration

Most terminology APIs can be decomposed into publication APIs, which support CRUD (-like) operations to publish, update/version or retire content; discovery APIs which allow users to determine what content is available, returning some form of metadata in the process; and query APIs that provide access to the content itself.

An MVF Translation Server is a prospective client of the terminology discovery and query API, as described in Clause 11, below. In turn, a modeling tool is a prospective client of the MVF Translation API, implemented by an MVF Translation Server. The modeling tool itself may be a client of the terminology server Discovery API, for example, to offer users the ability to discover which translations would be supported given the available vocabularies. The modeling tool itself may leverage the Query API to gather detailed information to be presented to its users.

² <https://hl7.org/fhir/terminology-service.html>

11. MVF Translation Interfaces

The primary MVF use case consists in the substitution of the terms used in a model's elements with other terms, based on the Vocabularies referenced by the currently active Workspace, that are iso-semantic (in some context), based on co-reference to a common concept designated by an mvf:MVFEntry.

This Translation Service API is a specialization of the API for Knowledge Platform (API4KP) "Translation" API, in the following sense.

Relationship to API4KP

An M1 Model that is an instance of a (M3) MOF-based M2 MetaModel can be considered an M1 Expression in a Language M2³, whose formal grammar is grounded in M3. More specifically, API4KP operations process (Knowledge) Artifacts, each of which is the digital manifestation of an Expression, such as the binary content carried by a file or a memory device. The distinction between Artifact and Expression is secondary to this discussion.

An api4kp:Translation is an operation that preserves the interpretation of the Artifact (api4kp:Knowledge Asset), but modifies at least one of the components of the Expression, which include the syntax, the notation, and/or the terminology. In particular, an mvf:Translation is an api4kp:Translation which is restricted to a change in Vocabulary but not in (modeling) Language.

MVF:translate as a profile of API4KP:translate

The specification of the behavior of an mvf:Translation service can also be defined in terms of API4KP micro-operations.

Figure 12: MVF Translation API

Given the signatures:

```
mvf:translate( Model source, Code targetLang, Identifier communityID ) : Model
```

```
api4kp:translate(
    KnowledgeCarrier source, Representation targetRep, String context ) : KnowledgeCarrier
```

³ The API4KP definition is also compatible with the Distributed Ontology Language (DOL) Definition of "Ontology, Model or Specification" (dol:OMS), even if API4KP requires the language to have a formal Grammar, but does not require the language to have formal semantics.

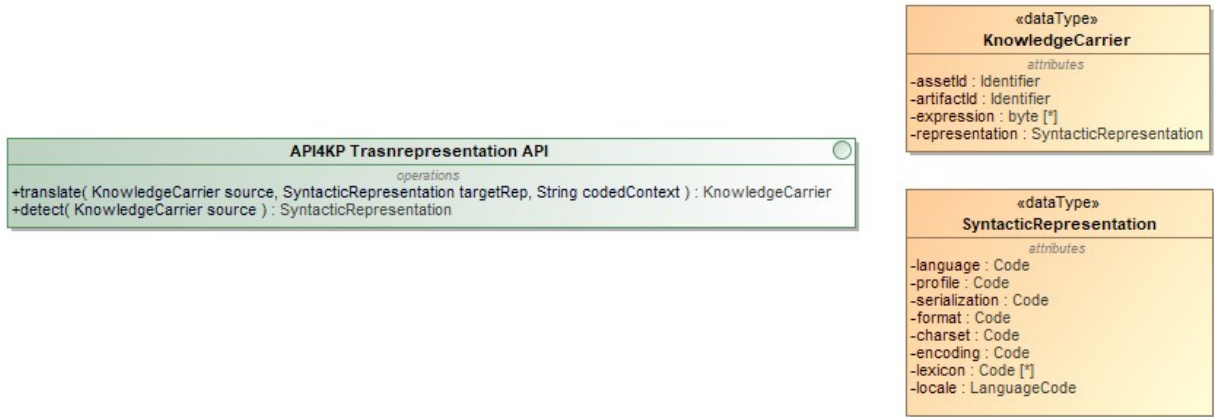

Figure 13: API4KP Translation API

- KnowledgeCarrier is a structured object that wraps the encoded serialization of a Model, its Identifier(s) and its Syntactic Representation
- A Syntactic Representation lists the syntactic elements Language (Syntax), Profile, Serialization, Format, CharSet, Encoding, Lexicon and Localization

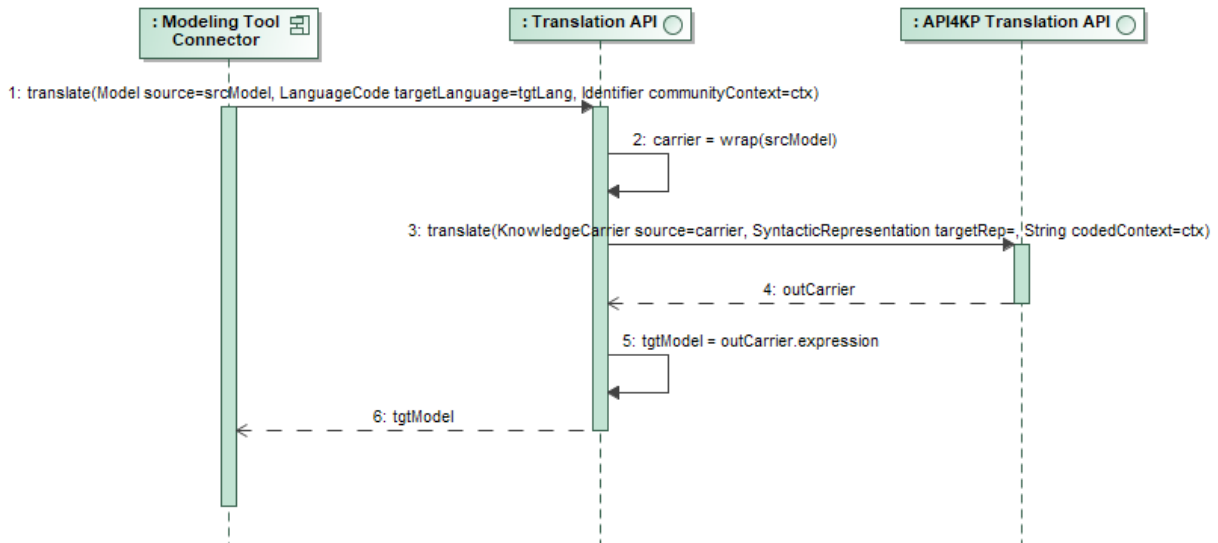

Figure 14: MVF to API4KP Delegation

The implementation of the MVF Translation API is responsible for the construction of the KnowledgeCarrier wrapper, using the source model, on the assumption the component would have enough information to infer the source model's SyntacticRepresentation, or implement the api4kp:detect operation for this purpose.

mvf:translate Specification

Figure 15: API4KP-based Specification of the MVF-profiled api4kp:translate operation

The implementation of the api4kp:translate operation can be decomposed as follows:

- Coherently with the MVF metamodel, the Locale language of the target SyntacticRepresentation should be used to lookup the (Identifier of the) target Vocabulary. This operation should be implemented by delegation to the underlying Terminology API. The community context designator could be used to filter/refine the search
- The source Model should be introspected, coherently with the semantics of the api4kp:select API, to extract all the Model elements that are associated to any MVF entry.
The SyntacticRepresentation of the source KnowledgeCarrier contains the information necessary to parse the Model itself, constructing an Abstract Syntax Tree that can be traversed for processing.
In the notable case of MOF-based models, one could assume an XMI Serialization, which implies the use of the XML meta-format. An implementation of the MOF conceptual APIs could be used to implement the api4kp:select operation. Alternative implementations could leverage technologies such as XPath or other traversal languages.
- Given the mapping between model elements and MVFEntries, for each entry, the corresponding VocabularyEntry (term) is looked up in the resolved target Vocabulary. This operation should also be delegated to the underlying terminology API
- The resulting VocabularyEntries are used to update the Model elements. In MOF based models, the MOF APIs could be used to update the ‘name’ of each Element.
- Finally, the updated model is serialized and wrapped according to the client’s requested target SyntacticRepresentation

This page intentionally left blank.

Annex A: Deliverables

(normative)

The MVF ontologies are delivered as (1) RDF/XML serialized OWL (normative and definitive), and (2) Turtle serialized OWL (normative and definitive).

The ontologies included in MVF makes normative reference to the Commons Ontology Library, the Languages, Countries and Codes (LCC) ontologies, the DCMI Dublin Core Metadata Terms [Dublin Core] and W3C Simple Knowledge Organization System (SKOS) Recommendation [SKOS], which are not part of this specification.

The individual RDF/XML files are UTF-8 conformant XML files that are also OWL 2 compliant, and may be examined using any text editor, XML editor, or RDF or OWL editor. They have been verified for syntactic correctness via the W3C RDF Validator. They have also been checked for logical consistency using the Pellet OWL 2 reasoner from Stardog Union (formerly Complexible, and prior to that, Clark & Parsia) as well as the HermiT OWL 2 reasoner from Oxford University. It is anticipated that the OWL ontologies will be dereference-able, together with technical documentation (HTML) from the OMG site.

Annex B: Example (informative)

Figure 16 below provides an example that shows how multiple vocabulary elements in a notional financial model can be applied to the concepts in that model.

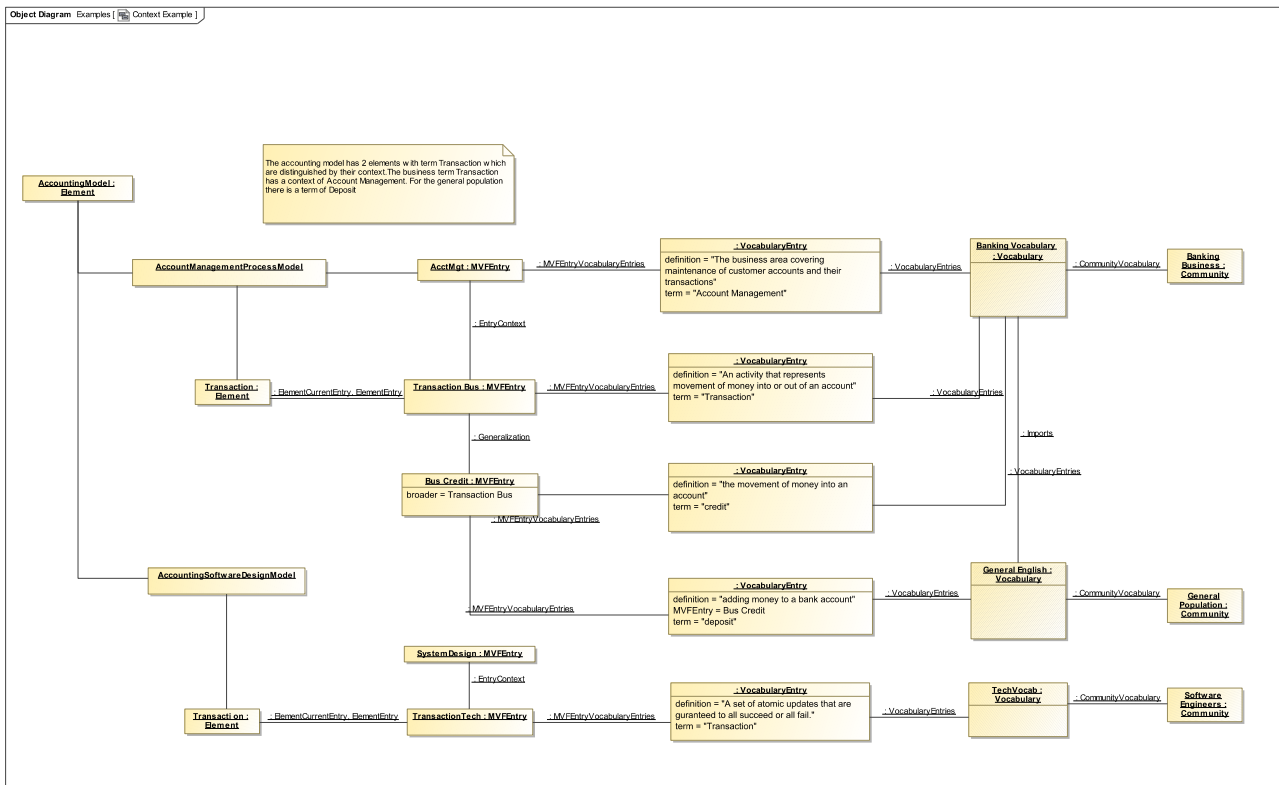

Figure 16: Example showing a mapping from multiple vocabulary elements to the same concept
