USE OF SPECIFICATION - TERMS, CONDITIONS & NOTICES

The material in this document details an Object Management Group specification in accordance with the terms, conditions and notices set forth below. This document does not represent a commitment to implement any portion of this specification in any company's products. The information contained in this document is subject to change without notice.

LICENSES

The companies listed above have granted to the Object Management Group, Inc. (OMG) a nonexclusive, royalty-free, paid up, worldwide license to copy and distribute this document and to modify this document and distribute copies of the modified version. Each of the copyright holders listed above has agreed that no person shall be deemed to have infringed the copyright in the included material of any such copyright holder by reason of having used the specification set forth herein or having conformed any computer software to the specification.

Subject to all of the terms and conditions below, the owners of the copyright in this specification hereby grant you a fully-paid up, non-exclusive, nontransferable, perpetual, worldwide license (without the right to sublicense), to use this specification to create and distribute software and special purpose specifications that are based upon this specification, and to use, copy, and distribute this specification as provided under the Copyright Act; provided that: (1) both the copyright notice identified above and this permission notice appear on any copies of this specification; (2) the use of the specifications is for informational purposes and will not be copied or posted on any network computer or broadcast in any media and will not be otherwise resold or transferred for commercial purposes; and (3) no modifications are made to this specification. This limited permission automatically terminates without notice if you breach any of these terms or conditions. Upon termination, you will destroy immediately any copies of the specifications in your possession or control.

PATENTS

The attention of adopters is directed to the possibility that compliance with or adoption of OMG specifications may require use of an invention covered by patent rights. OMG shall not be responsible for identifying patents for which a license may be required by any OMG specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. OMG specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

GENERAL USE RESTRICTIONS

Any unauthorized use of this specification may violate copyright laws, trademark laws, and communications regulations and statutes. This document contains information which is protected by copyright. All Rights Reserved. No part of this work covered by copyright herein may be reproduced or used in any form or by any means--graphic, electronic, or mechanical, including photocopying, recording, taping, or information storage and retrieval systems--without permission of the copyright owner.

OMG's Issue Reporting Procedure

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page https://www.omg.org, under OMG Specifications, Report an Issue.

Commented [GB3]: UAF11-298 add contents of UAF 11 DMM sect1-6.5 to font of document

1 Scope

1.1 Introduction

There are four parts to this specification, two are normative and two informative. The normative parts are:

1. The UAF Domain Metamodel (DMM) (this document) that provides the definition of concepts, relationships and viewpoints for the framework. The UAF DMM is the basis for any implementation of UAF including non-UML/SysML implementations.
2. The UAF Profile (UAFP) [see document dtc/19-06-15] is a UML/SysML implementation of the UAF DMM

The informative parts are:

3. The UAF Traceability, Annex A ([see document dtc/19-06-17]) which details the mappings between the UAF and the various frameworks and languages that contribute to the UAF.
4. The UAF Example Model, Annex B [see document dtc/19-06-18] which illustrates a practical usage of UAF.

Deleted: XXXX

Deleted: XXXX

1.2 UAF Background

UAF evolved from the Unified Profile for DoDAF and MODAF (UPDM), version 2.1. UAF extends the scope of UPDM and generalizes it to make it applicable to commercial as well as military architectures. The intent of UAF is to provide a standard representation for describing enterprise architectures using a Model Based Systems Engineering (MBSE) approach.

The core concepts in the UAF are based upon the DoDAF 2.0.2 Domain Metamodel (DM2) and the MODAF ontological data exchange mechanism (MODEM), Security Views from Canada's Department of National Defense Architecture Framework (DNDAF) and the North Atlantic Treaty Organization (NATO) Architecture Framework (NAF) v 4.

UAF models describe a system[1] from a set of stakeholders' concerns such as security or information through a set of predefined viewpoints. Developed models can also reflect custom viewpoints or users can develop more formal extensions for new viewpoints.

The UAFP can be used to develop architectures compliant with:

- Department of Defense Architecture Framework (DoDAF) version 2.02
- Ministry of Defence Architecture Framework (MODAF) version 1.3
- North Atlantic Treaty Organization (NATO) Architecture Framework (NAF) version 3.1
- North Atlantic Treaty Organization (NATO) Architecture Framework (NAF) version 4

UAF v 1.1 supports the capability to:

- model architectures for a broad range of complex systems, which may include hardware, software, data, personnel, and facility elements;
- model consistent architectures for system-of-systems (SoS) down to lower levels of design and implementation;
- support the analysis, specification, design, and verification of complex systems; and
- improve the ability to exchange architecture information among related tools that are SysML based.

[1] The term system is used from: "Systems and software engineering -- Architecture description," http://www.iso.org/iso/catalogue_detail.htm?csnumber=50508

1.3 Intended Usage

The UAF enables the modeling of strategic capabilities, operational scenarios, services, resources, personnel, security, projects, standards, measures and requirements; which supports best practices through, separation of concerns and abstractions. In addition, the UAF enables the modeling of related architecture concepts such as:

- System of Systems (SoS),
- information exchanges consistent with the National Information Exchange Model (NIEM),
- DoD's doctrine, organization, training material, leadership & education, personnel, and facilities (DOTMLPF)
- UK Ministry of Defence Lines of Development (DLOD) elements,
- Human Computer Interfaces (HCI).

Further, The UAF conforms to terms defined in the ISO/IEC/IEEE 42010 standard for architecture description, where the terms: *architecture, architecture description (AD), architecture framework, architecture view, architecture viewpoint, concern, environment, model kind, stakeholder* [ISO/IEC/IEEE 42010:2011] form correspondence rules specified as constraints on UAF.

1.4 Related Documents

The specification includes a metatmodel and description as separate documents. Other appendicies are also provided as separate documents. The table below provides a listing of these documents:

2. Conformance

UAF specifies four types of conformance.

Type 1 Conformance: - UAF View specification conformance. A tool demonstrating view specification conformance shall implement a version of all the view specifications defined in the UAF Grid, with the exception of the view specifications in the Metadata Domain. Optionally the tool vendor can implement other donor framework viewpoints, for instance DoDAF, MODAF or NAF based upon the mapping between them and UAF provided in Appendix A (dtc/19-06-17)

Type 2 Conformance: - UAF Conceptual Syntax Conformance. A tool demonstrating conceptual syntax conformance is consistent with the concepts, relationships and constraints defined in the UAF DMM (this document). UAF Conceptual Syntax Conformance implies Type 1 Conformance.

Type 3 Conformance: - UAF Formal Syntax Conformance. A tool demonstrating formal syntax conformance:

- enables instances of concrete UAFP stereotypes defined in the UAFP (dtc/19-06-15)
- complies with the constraints defined in the UAFP (dtc/19-06-15)
- complies with the SysML version 1.5 Concrete Syntax Conformance (formal/17-05-01)

UAF Formal Syntax Conformance implies Type 2 Conformance.

Type 4 Conformance: - UAF Model interchange conformance. A tool demonstrating model interchange conformance can import and export conformant XMI for all valid UAFP models. Model interchange conformance implies Type 3 Conformance.

TPPU	Task, Post, Process, and Use
TV-*	Technical View
UAF	Unified Architecture Framework
UAFP	Unified Architecture Framework Profile
UPDM	Unified Profile for DoDAF/MODAF

6. Additional Information

6.1 Changes to Adopted OMG Specifications

This specification completely replaces Unified Architecture Framework (UAF), version 1.0 https://www.omg.org/spec/UAF/About-UAF/

6.2 Language Architecture

The UAF specification reuses a subset of UML 2.5.1 and SysML 1.5 and provides additional extensions needed to address requirements in the UPDM 3.0 RFP Mandatory Requirements. Those requirements form the basis for this specification. This specification documents the language architecture in terms of UML 2.5.1 and SysML 1.5 and specifies how to implement UAF. This clause explains design principles and how they are applied to define the UAF language architecture.

6.3 Philosophy

The UAF development uses a model-driven approach. A simple description of the work process is:

- A Domain Metamodel (DMM) uses UML Class models to represent individuals, types and tuples that aggregate the concepts defined in DoDAF, MODEM, NAF, DNDAF and other frameworks.
- The aligned and renamed viewpoints from the various frameworks provide a common generic name for each viewpoint. It should be noted that the term viewpoint is in the context of ISO 42010 where a viewpoint is the specification of a view. The UAF viewpoints are mapped to the corresponding viewpoint in the relevant contributing framework. It is the viewpoints described in the DMM that provides the basis for the Unified Architecture Framework (UAF).
- The UAF provides an abstraction layer that separates the underlying UAF metamodel from the presentation layer. The results of this mapping are given in Appendix A (see document dtc/19-06-17 and an overview of the viewpoints in a grid format are given in this document.
- The intent of the UAF is to provide a Domain MetaModel usable by non-UML/SysML tool vendors who may wish to implement the UAF within their own tool and metalanguage.
- The Unified Architecture Framework Profile (UAFP) is the standard implementation of the UAF DMM. It was created by mapping the UAF concepts and relationships to corresponding stereotypes in the UAFP.
- The UAFP analysis and refactoring reflects language architecture, tool implementation, and reuse considerations.
- The specification is generated from the UML model used to describe the UAF DMM and UAFP. This approach allows the team to concentrate on architecture issues rather than documentation production. The UML tool automatically maintains consistency. The UML tool improves maintenance and enables traceability between the UAF and the UAFP where every stereotype is linkable to the UAF element using UML Abstraction relationship.

Formatted: Not Highlight

6.4 Core Principles

The fundamental design principles for UAF DMM are:

- **Requirements-driven**: UAF is intended to satisfy the requirements of the UPDM 3.0 RFP Mandatory Requirements.
- **Influence from donor Frameworks:** The DMM was based upon an aggregation of concepts and relationships from the donor frameworks.
- **IDEAS Ontology driven:** The DMM was based upon a simplified version of the IDEAS ontology, see chapter 8.
- **DMM Notation:** The DMM was expressed using UML class diagram notation.
- **Reusability of UML Metamodel concepts:** The UAF DMM reuses a number of concepts from the UML Metamodel, such as Statemachines, Activities and Interactions. The explicit relationship to these concepts enables the UAF DMM to reuse UML semantics instead of reinventing its own semantics.
- **Reusability of BPMN concepts:** The UAF DMM reuses a number of concepts from BPMN, such as processes. The explicit relationship to these concepts enables the UAF DMM to reuse BPMN semantics instead of reinventing its own semantics.

7. UAF Grid

Due to the complexity of managing the multiple viewpoints with overlapping concerns and metamodels, the standard viewpoints are refactored as described in the donor frameworks into a more manageable format. This decision led to the development of the UAF grid which is described below.

The grid is a way of showing how the various viewpoints (known as *view specifications* in the rest of document) correspond to *domains* (horizontal rows) and the *model kinds* (the columns) that describe the view specification. The intent of the grid is not to be complete, but to capture the information that is present in the frameworks that contributes to the UAF, consequently, some gaps are evident.

Figure 7:1- UAF Grid

Notes related to suffixes in the grid

a. The view specifications in the Metadata Domain are not modeled as part of the UAF but are architectural artifacts that contribute to the success in defining and developing an architecture.

b. To be able to evaluate architecture behavior and constraints (i.e., non-functional requirements) it is necessary to define actual instances of the architectural elements. The expectation is that tool vendors intending to implement the UAF have capabilities native to their tools to enable behavioral simulation and the evaluation of measures and constraints through parametric diagrams or a proprietary equivalent.

c. The information model is a column across the domains and can be defined in any of its forms, i.e., Conceptual, Logical or Physical. The expectation is that most developers of the information model will use the Conceptual or Logical forms of the data model when using an abstract modeling tool.

Commented [GB4]: UAF11-300, delet the original introduction section and add contents of UAF 11 DM sect 7-9.docx

Deleted: 1

Commented [GB5]: UAF 11-20 update grid to take account of NAF 4, insert M2 v2.png

d. The parameters column captures the measures and environments across the architecture in all the different domains.

e. The expectation is that the physical schema model would not be defined in the UAF. Any tool implementing the framework provides a means to import or link-to representations of the physical model.

f. The Metadata Taxonomy view specification provides a means to extend the framework to other domains.

The detailed mapping between the view specifications of the UAF shown in the grid and the viewpoints from the donor frameworks is described in dtc\2019-06-17. A definition for each view specification in the grid is described in the following chapters.

Formatted: Not Highlight

7.1 Descriptions of Domains and Model Kinds

Table 7:1 - Definitions for the Domains

Domain	Acronym	Description
Metadata	Md	Identifies the metadata required to develop a suitable architecture that is fit for its purpose.
Strategic	St	Capability management process. Describes the capability taxonomy, composition, dependencies and evolution.
Operational	Op	Illustrates the Logical Architecture of the enterprise. Describes the requirements, operational behavior, structure, and exchanges required to support (exhibit) capabilities. Defines all operational elements in an implementation/solution independent manner.
Services	Sv	The Service-Orientated View (SOV) is a description of services needed to directly support the operational domain as described in the Operational View. A service within MODAF is understood in its broadest sense, as a unit of work through which a provider provides a useful result to a consumer. DoDAF: The Service Views within the Services Viewpoint describe the design for service-based solutions to support operational development processes (JCIDS) and Defense Acquisition System or capability development within the Joint Capability Areas.
Personnel	Pr	Defines and explores organizational resource types. Shows the taxonomy of types of organizational resources as well as connections, interaction and growth over time.
Resources	Rs	Captures a solution architecture consisting of resources, e.g.,organizational, software, artifacts, capability configurations, and natural resources that implement the operational requirements. Further design of a resource is typically detailed in SysML or UML.
Security	Sc	Security assets and security enclaves. Defines the hierarchy of security assets and asset owners, security constraints (policy, laws, and guidance) and details where they are located (security enclaves).
Projects	Pj	Describes projects and project milestones, how those projects deliver capabilities, the organizations contributing to the projects and dependencies between projects.
Standards	Sd	MODAF: Technical Standards Views are extended from the core DoDAF views to include non-technical standards such as operational doctrine, industry process standards, etc. DoDAF: The Standards Views within the Standards Viewpoint are the set of rules governing the arrangement, interaction, and interdependence of solution parts or elements.
Actual Resources	Ar	The analysis, e.g., evaluation of different alternatives, what-if, trade-offs, V&V on the actual resource configurations. Illustrates the expected or achieved actual resource configurations.

Commented [GB6]: UAF11-23 deleted, "Captrues the metadat relevant to the entire architecture etc." to be replaced by "identifies the metadata required to develop a suitable architecture that is fit for its purpose.

Table 7:2 - Definitions of the Model Kinds

Model Kind	Acronym	Description
Taxonomy	Tx	Presents all the elements as a standalone structure. Presents all the elements as a specialization hierarchy, provides a text definition for each one and references the source of the element
Structure	Sr	Describes the definitions of the dependencies, connections, and relationships between the different elements.
Connectivity	Cn	Describes the connections, relationships, and interactions between the different elements.
Processes	Pr	Captures activity based behavior and flows. It describes activities, their Inputs/Outputs, activity actions and flows between them.
States	St	Captures state-based behavior of an element. It is a graphical representation of states of a structural element and how it responds to various events and actions.
Interaction Scenarios	Is	Expresses a time ordered examination of the exchanges as a result of a particular scenario. Provides a time-ordered examination of the exchanges between participating elements as a result of a particular scenario.
Information	If	Address the information perspective on operational, service, and resource architectures. Allows analysis of an architecture's information and data definition aspect, without consideration of implementation specific issues.
Constraints	Ct	Details the measurements that set performance requirements constraining capabilities. Also defines the rules governing behavior and structure.
Roadmap	Rm	Addresses how elements in the architecture change over time. Also, how at different points in time or different periods of time.
Traceability	Tr	Describes the mapping between elements in the architecture. This can be between different viewpoints within domains as well as between domains. It can also be between structure and behaviors.

7.2 Domain Interrelationships

Although the gird is the primary means of expressing the relationship between the Domains, Model Kinds and View Specifications, because of it is two-dimensional nature it is not adequate to explain the abstract interrelationships that exist between the domains. The following diagram is an indication of th how the domains are interrelated.

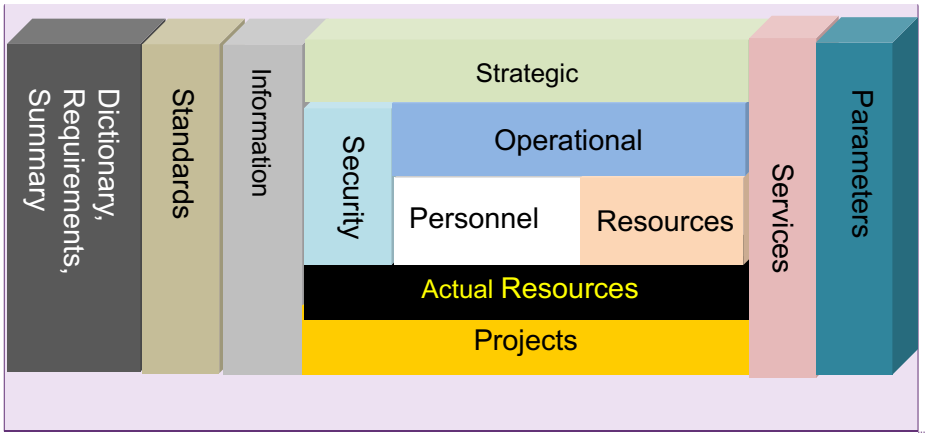

Figure 7:2 - Domain Interrelationships

Where a Domain is shown vertically the intent is to show that the Domain is a cross cutting concern that goes across the levels of abstraction in the architecture.

Where a Domain is shown horizontally the intent is to show that the Domain exists in a layer of abstraction between the Domains above and below it and there is an interrelationship with the Domains either side of it.

7.3 Domain Metamodel Diagram Legend

Note that the diagrams rely on color to aid the reader in understanding the model. Please refer to the legend below to understand the diagrams.

The following is the legend of element colors used in the DMM and what they denote.

Commented [GB7]: UAF 11-21 Add 3d representation of domain interconnectivy Add 3d UAF.png

Commented [GB8]: UAF11-294 delte text Delete the following text
This annex comprise of various diahram that document the Domain Metamodel (DMM) that document MoDAF 1.5 and MODAF 1.2 integrated model. This model was used as a basis for creating the UPDM profile.

Formatted: OMG Heading 2

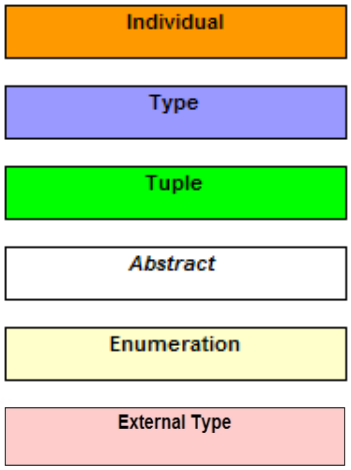

Figure 7:3 - Legend of color codes for element types defined in UAF

The meaning of the element types in the UAF are based upon concepts put forth in the International Defence Enterprise Architecture Specification (IDEAS).

- An Individual denotes a single instance of an element
- A Type denotes a set of Individuals
- A Tuple denotes a relationship that exists between elements
- An Abstract denotes that the element has no direct use but is a means of construction
- An Enumeration is a complete, ordered listing of all the items in a collection
- An External Type is an element that exists outside of the core DMM but is referencable by elements in the DMM

8. Domain Metamodel Diagrams

Note that the diagrams rely on color to aid the reader in understanding the model. Please refer to the legend in the various diagrams to understand the specific definitions.

8.1 View Specifications

This section documents each of the view specifications of UAF.

8.1.1 View Specifications::Metadata

Formatted: Heading 3

Stakeholders: Enterprise Architects, Technical Managers.
Concerns: architecture development process, architecture traceability, metamodel and its extensions, architecture versioning.
Definition: Identifies the metadata required to develop a suitable architecture that is fit for its purpose.

View Specifications::Metadata::Taxonomy

Stakeholders: Enterprise Architects, Technical Managers.

Concerns: metamodel and its extensions.

Definition: captures user defined metamodel extensions

Recommended Implementation: UML Profile Diagram, SysML Block Definition Diagram

View Specifications::Metadata::Structure

Stakeholders: Enterprise Architects, Technical Managers.

Concerns: domains, model kinds, and view specifications that are used to describe the architecture.

Definition: (i) lists predefined and custom domains, model kinds, and view specifications (ii) and identify the key stakeholders and their concerns.

Recommended Implementation: SysML Block Definition Diagram, SysML Package Diagram.

View Specifications::Metadata::Connectivity

Stakeholders: Enterprise Architects, people who want to understand relationships to related architectural descriptions, Technical Managers.

Concerns: high-level dependencies between architectural descriptions.

Definition: depicts and analyzes all relevant dependencies between architectural descriptions, e.g. reference architectures, as-is to to-be architectures.

Recommended Implementation: SysML Block Definition Diagram, SysML Package Diagram, matrix format.

View Specifications::Metadata::Processes

Stakeholders: Enterprise Architects, people who want to understand the architecture development process, Technical Managers.

Concerns: methodology used.

Definition: methodology used in developing the architecture.

Recommended Implementation: SysML Activity Diagram, text.

View Specifications::Metadata::States

Stakeholders: Enterprise Architects, people who want to understand the architecture governance, Technical Managers.

Concerns: architecture status.

Definition: captures version number and approval workflow of the architecture.

Recommended Implementation: SysML State Machine Diagram, state table, text.

View Specifications::Metadata::Constraints

Stakeholders: Enterprise Architects, people who want to understand constraints for the architecture, Technical Managers.

Concerns: architectural constraints.

Definition: captures assumptions and constraints on the architecture.

Recommended Implementation: tabular format, text.

View Specifications::Metadata::Roadmap

Stakeholders: Enterprise Architects, people who want to understand the architecture development plan, Technical Managers.

Concerns: architecture release schedule.

Definition: captures project timeline for the architecture.

Recommended Implementation: timeline, text.

View Specifications::Metadata::Traceability

Stakeholders: Enterprise Architects, people who want to understand impact of change across the architecture supporting assets, Technical Managers.

Concerns: reuse of architectures.

Definition: shows references to asset libraries, legacy architectures, and external sources, e.g. documents.

Recommended Implementation: SysML Block Definition Diagram, SysML Package Diagram, tabular format.

8.1.2 View Specifications::Strategic

Stakeholders: Capability Portfolio Managers.
Concerns: capability management process.
Definition: describe capability taxonomy, composition, dependencies and evolution.

View Specifications::Strategic::Taxonomy

Contains the diagrams that document the Strategic Taxonomy Viewpoint.

View Specifications::Strategic::Taxonomy::Strategic Taxonomy

Stakeholders: PMs, Enterprise Architects, Executives.
Concerns: capability needs.
Definition: shows the taxonomy of capabilities.
Recommended Implementation: SysML Block Definition Diagram.

Formatted: Heading 3

Deleted: Introduction¶

¶

¶

¶

1.1 Overview¶

¶

This Appendix describes the Unified Architecture Framework, the Domain Meta-Model (DMM) that captures the concepts, relationships, and viewpoints that specify the Unified Architecture Framework Profile (UAFP). As well as providing the DMM for the UAFP, it is intended to provided a non-implementation specific metamodel for those non-UML or SysML tool vendors who may wish to implement the UAF, consequently it is not neccessary to generate XMI for the UAF.¶

¶

Due to the complexity of managing the multiple viewpoints with overlapping concerns and metamodels, the standard viewpoints are refactored as described in the donor frameworks into a more manageable format. This decision led to the development of the grid below.¶

¶

The grid is a way of showing how the various viewpoints correspond to the generic layers of abstraction or domains (horizontal rows) and the types of model kinds or architectural representations (the columns) that describe the viewpoints. The intent of the grid is not to be complete, but to capture the information that is present in the frameworks that contribute to the UAF/P, consequently, some gaps are evident.¶

¶

Notes:¶

¶

a. These viewpoints are not defined as part of the UAF, but are architectural artifacts that contribute to the success in defining and developing an architecture.¶

¶

b. To be able to evaluate architecture behavior and constraints (i.e., non functional requirements) it is necessary to define actual instances of the architectural elements. The expectation is that tool vendors intending to implement the UAF/P have capabilities native to their tools to enable behavioral simulation and the evaluation of measures and constraints through parametric diagrams or a proprietary equivalent.¶

¶

c. The information model is a column across the abstraction layers that can be defined in any of its forms, i.e., Conceptual, Logical, or as a schema at any level of abstraction. The expectation is that most developers of the information model will use the Conceptual or Logical forms of the data model when using an abstract modeling tool.¶

¶

d. The parameters column captures the measures and environments across the architecture in all the different layers of abstraction.¶

¶

e. The expectation is that the physical schema model not be developed in the framework but any tool implementing the [1]

- OperationalArchitecture
- OperationalPerformer
- Process

Deleted: • Activity¶

2.3 View Specifications::Services

Stakeholders: Enterprise Architects, Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: specifications of services required to exhibit a Capability
Definition: shows Service Specifications and required and provided service levels of these specifications required to exhibit a Capability or to support an Operational Activity.

2.3.1 View Specifications::Services::Taxonomy

Contains the diagrams that document the Services Taxonomy Viewpoint.

2.3.1.1 View Specifications::Services::Taxonomy::Services Taxonomy

Stakeholders: Enterprise Architects, Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: service specification types and required and provided service levels of these types
Definition: shows the taxonomy of types of services and the level of service that they are expected to provide or are required to meet through the display of ActualMeasurements associated with the Provided and Required Service Level. Recommended Implementation: SysML Block Definition Diagram.

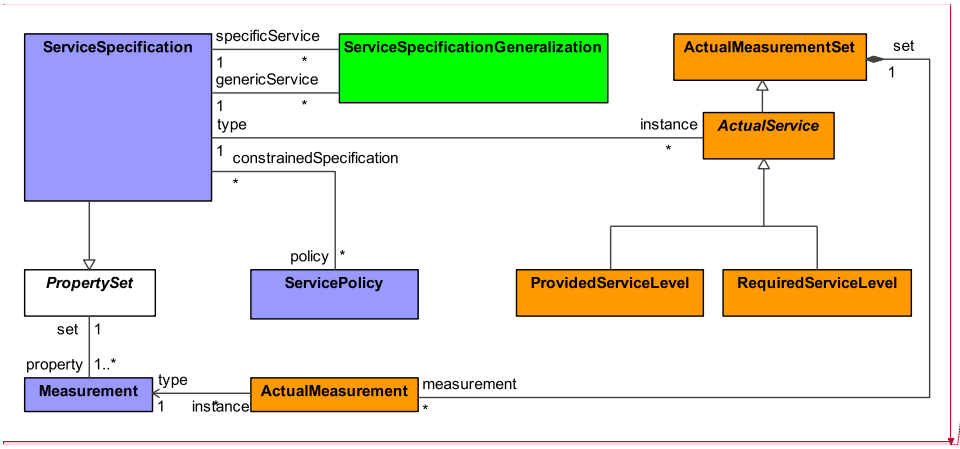

Figure 2.17 - Services Taxonomy

Elements

- ActualMeasurement
- ActualMeasurementSet
- ActualService
- Measurement
- PropertySet
- ProvidedServiceLevel
- RequiredServiceLevel
- ServicePolicy
- ServiceSpecification
- ServiceSpecificationGeneralization

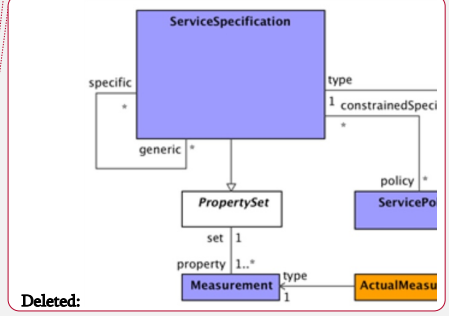
2.3.2 View Specifications::Services::Structure

Contains the diagrams that document the Services Structure Viewpoint.

2.3.2.1 View Specifications::Services::Structure::Services Structure

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: combination of services required to exhibit a capability
Definition: shows the composition of services and how services are combined into a higher level service required to exhibit a capability or support an operational activity.
Recommended Implementation: SysML Block Definition Diagram, SysML Internal Block Diagram

Commented [AM49]: UAF11-276 Figure 2.17 - Services Taxonomy replaced by Services_Taxonomy.svg



Deleted:

Commented [AM50]: UAF11-276
ServiceSpecificationGeneralization added to the Elements list

2.3.3 View Specifications::Services::Connectivity

Contains the diagrams that document the Services Connectivity Viewpoint.

2.3.3.1 View Specifications::Services::Connectivity::Services Connectivity

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: interoperability among services
Definition: specifies service interfaces, e.g., provided and required service operations, to ensure compatibility and reusability of services.
Recommended Implementation: SysML Block Definition Diagram, SysML Internal Block Diagram, tabular format

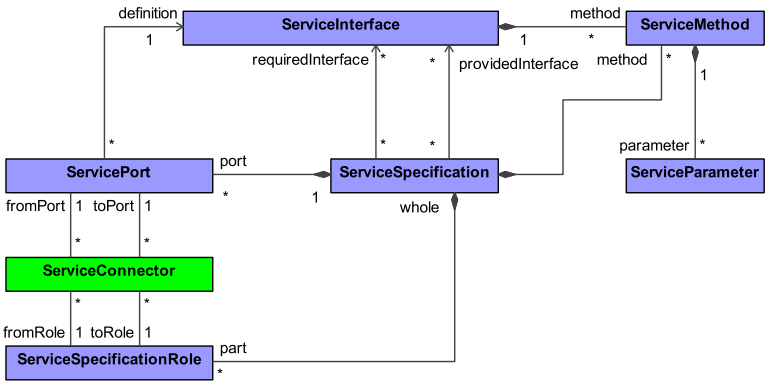

Figure 2.19 - Services Connectivity

Elements

-
-

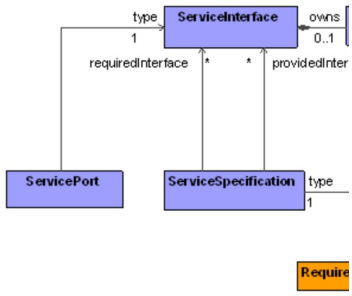
2.3.4 View Specifications::Services::Processes

Contains the diagrams that document the Services Processes Viewpoint.

2.3.4.1 View Specifications::Services::Processes::Services Processes

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: the behavior of a service in terms of the operational activities it is expected to support
Definition: provides detailed information regarding the allocation of service functions to service specifications, and data flows between service functions.
Recommended Implementation: SysML Activity Diagram, SysML Block Definition Diagram.

Deleted:



Commented [Yvonne53]: UAF11-74 and UAF11-75 Replaced figure.

Deleted: ActualMeasurementSet

Deleted: ActualService

Deleted: MeasurableElement

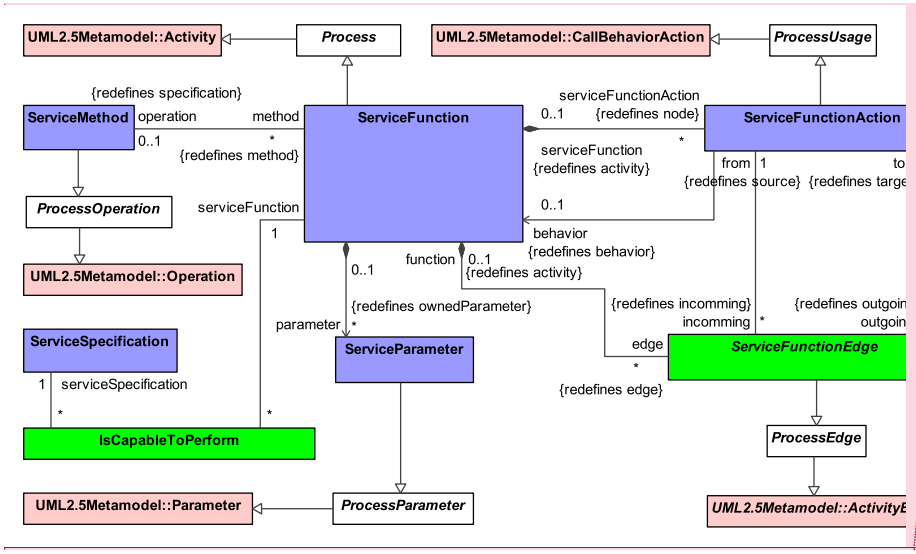
Deleted: ProvidedServiceLevel

Commented [Yvonne54]: UAF11-74 and UAF11-75 Removed unused elements and added ServiceConnector.

Deleted: RequiredServiceLevel

Commented [AM55]: UAF11-1 Text changed from "SysML Block Definition Diagram, SysML Internal Block Diagram, tabular format " to "SysML Activity Diagram, SysML Block Definition Diagram."

Deleted: SysML Block Definition Diagram, SysML Internal Block Diagram, tabular format¶



Commented [AM56]: UAF11-2 Diagram replaced by Services_Processes.svg.

View Specifications::Services::Processes::Services Processes BPMN Semantics

Commented [AM58]: UAF11-1 Section added to explain UAF metamodel relationships to BPMN.

Stakeholders: Solution Providers, Software Architects, Business Architects.
Concerns: the behavior of a service in terms of the operational activities it is expected to support.
Definition: provides detailed information regarding the allocation of service functions to service specifications, and data flows between service functions using BPMN.
Recommended Implementation: BPMN Process Diagram, SysML Block Definition Diagram.

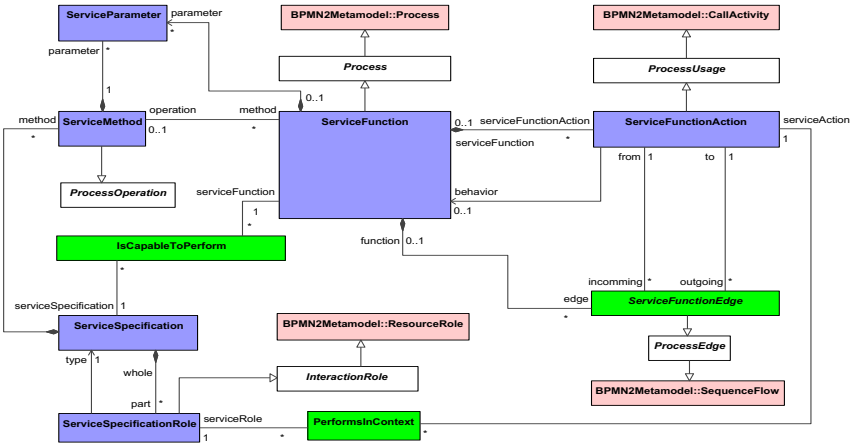

Figure 8:22 - Services Processes BPMN Semantics

2.3.5 View Specifications::Services::States

Contains the diagrams that document the Services States Viewpoint.

2.3.5.1 View Specifications::Services::States::Services States

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: the behavior of a service specification in terms of states and events causing transitions between states Definition: specifies the possible states a service specification may have, and the possible transitions between those states.
Recommended Implementation: SysML State Machine Diagram.

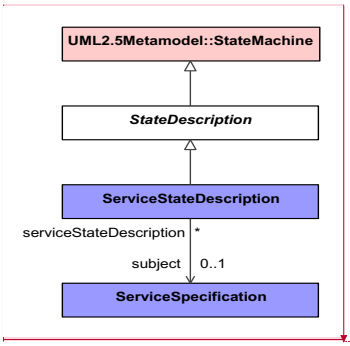

Figure 2.21 - Services States

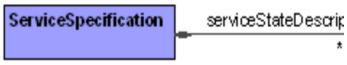
Commented [AM59]: UAF11-5 Diagram replaced by Services_States.svg.

Deleted:



Elements

- ServiceSpecification
- ServiceStateDescription
- StateDescription
- UML2.5Metamodel::StateMachine

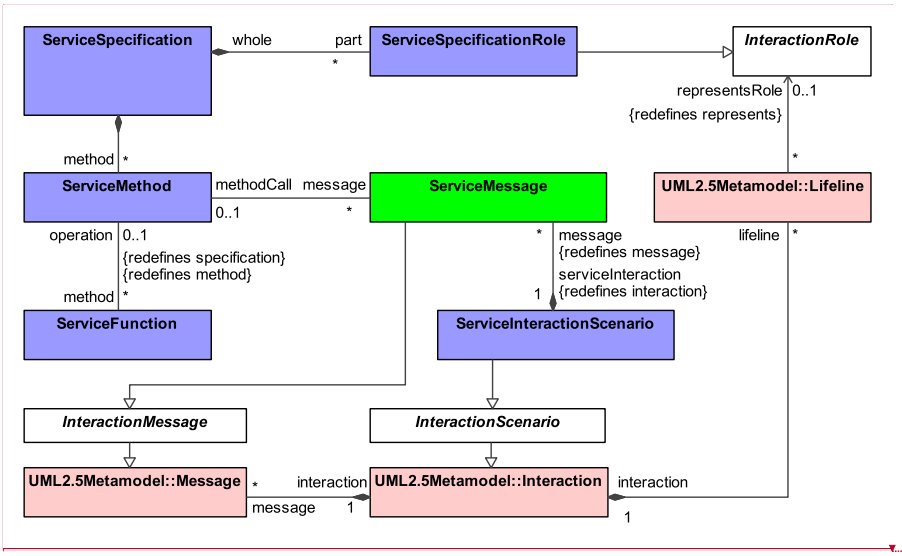
Commented [AM60]: UAF11-5 StateDescription and UML2.5Metamodel::StateMachine added to the Elements list.

2.3.6 View Specifications::Services::Interaction Scenarios

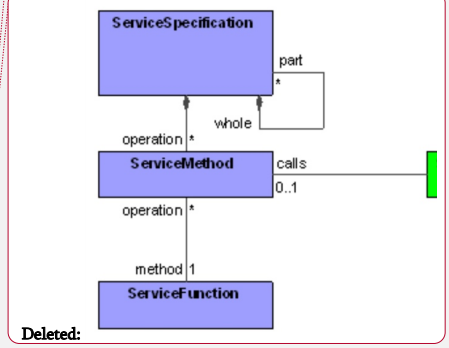
Contains the diagrams that document the Services Interaction Scenarios Viewpoint.

2.3.6.1 View Specifications::Services::Interaction Scenarios::Services Interaction Scenarios

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: the behavior of a service specification in terms of expected time-ordered examination of the interactions between service roles
Definition: specifies how a service roles interact with each other, service providers and consumers, and the sequence and dependencies of those interactions.
Recommended Implementation: SysML Sequence Diagram



Commented [AM61]: UAF11-2
Diagram replaced by Services_Interaction_Scenarios.svg



Deleted:

Figure 2.22 - Services Interaction Scenarios

2.3.7 View Specifications::Services::Constraints

Contains the diagrams that document the Services Constraints Viewpoint.

2.3.7.1 View Specifications::Services::Constraints::Services Constraints

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: service policies that apply to implementations of service specifications
Definition: specifies traditional textual service policies that are constraints on the way that service specifications are implemented within resources. The addition of SysML parametrics provide a computational means of defining service policies across the enterprise or within a specific service configuration.
Recommended Implementation: tabular format, SysML Parametric Diagram

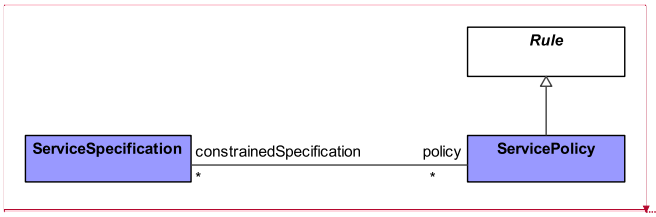

Figure 2.23 - Services Constraints

Elements

- Rule
- ServicePolicy
- ServiceSpecification

Commented [AM63]: UAF11-276 Figure 2.23 - Services Constraints

Commented [AM64]: UAF11-276 ConstraintBlock removed from the list of Elements

Deleted: • ConstraintBlock¶

2.3.8 View Specifications::Services::Roadmap

Contains the diagrams that document the Services Roadmap Viewpoint.

2.3.8.1 View Specifications::Services::Roadmap::Services Roadmap

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: service specification changes over time
Definition: provides an overview of how a service specification changes over time. It shows the combination of several service specifications mapped against a timeline.
Recommended Implementation: timeline, SysML Block Definition Diagram, SysML Internal Block Diagram

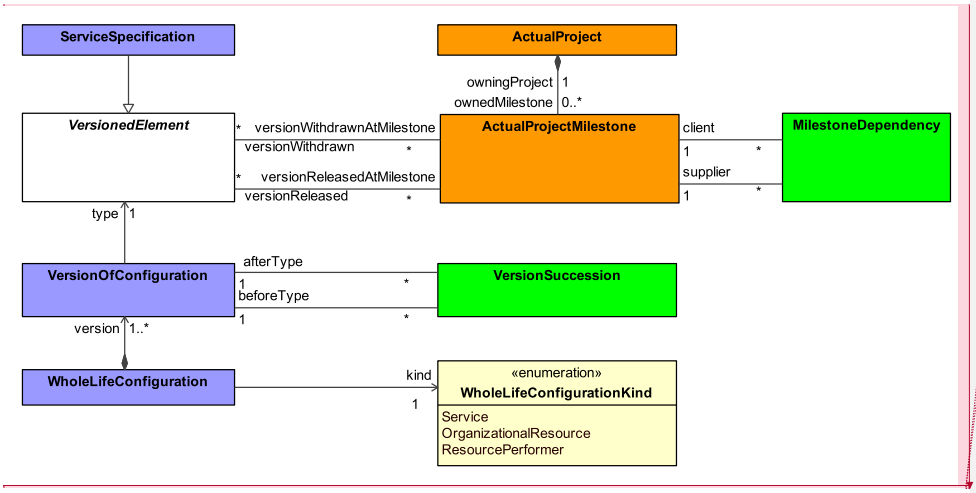

Figure 2.24 - Services Roadmap

Elements

- ActualProject
- ActualProjectMilestone
- MilestoneDependency
- ServiceSpecification
- VersionedElement
- VersionOfConfiguration
- VersionSuccession
- WholeLifeConfiguration

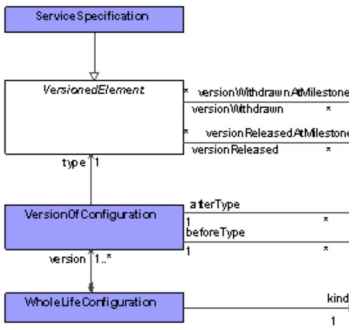
2.3.9 View Specifications::Services::Traceability

Contains the diagrams that document the Services Traceability Viewpoint.

2.3.9.1 View Specifications::Services::Traceability::Services Traceability

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: traceability between operational activities and service specifications that support them
Definition: depicts the mapping of service specifications to operational activities and how service specifications contribute to the achievement of a capability.
Recommended Implementation: tabular or matrix format.

Commented [AM65]: UAF11-276 Figure 2.24 - Services Roadmap
replaced by Services_Roadmap.svg



Deleted:

Commented [AM66]: Text “timeline, SysML Block Definition Diagram, SysML Internal Block Diagram” replaced by “tabular or matrix format.”.

Deleted: timeline, SysML Block Definition Diagram, SysML Internal Block Diagram

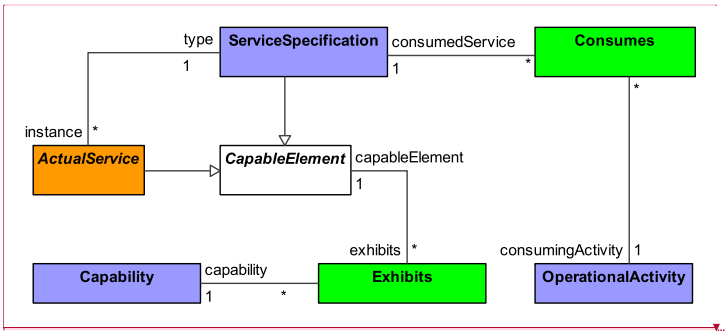


Figure 2.25 - Services Traceability

Elements

- ActualService
- Capability
- CapableElement
- Consumes
- Exhibits
- OperationalActivity

2.4 View Specifications::Personnel

Stakeholders: Human resources, Solution Providers, PMs
Concerns: human factors
Definition: aims to clarify the role of Human Factors (HF) when creating architectures in order to facilitate both Human Factors Integration (HFI) and systems engineering (SE).

2.4.1 View Specifications::Personnel::Taxonomy

Contains the diagrams that document the Personnel Taxonomy Viewpoint.

2.4.1.1 View Specifications::Personnel::Taxonomy::Personnel Taxonomy

Stakeholders: Human resources, Solution Providers, PMs
Concerns: organizational resource types
Definition: shows the taxonomy of types of organizational resources.
Recommended Implementation: SysML Block Definition Diagram

Commented [AM67]: UAF11-276 Figure 2.25 - Services Traceability
replaced by Services_Traceability.svg

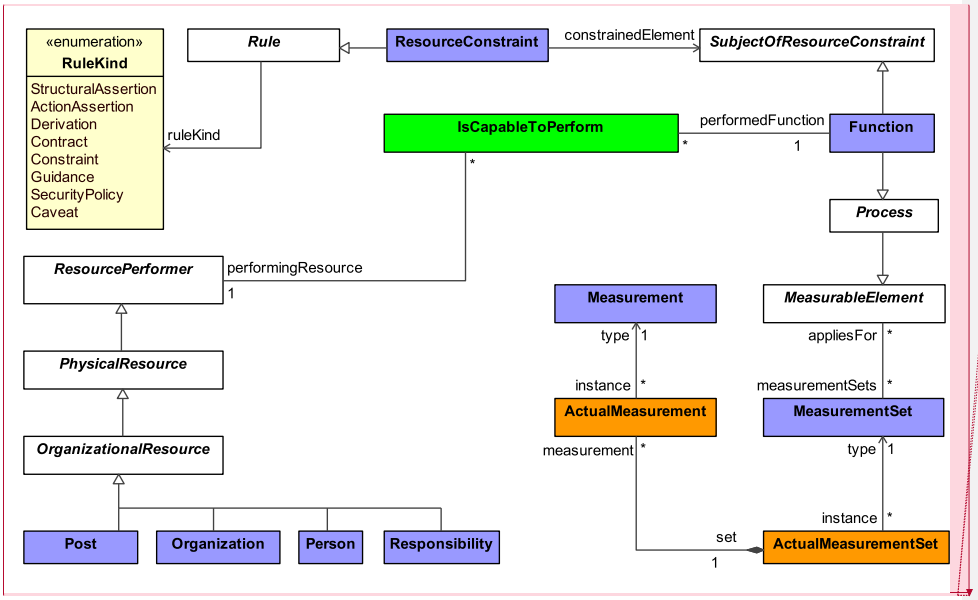
2.4.7.2 View Specifications::Personnel::Constraints::Personnel Constraints: Drivers

Stakeholders: Systems engineers, Solution providers, Human resources
Concerns: optimization of organizational resource behavior
Definition: captures the factors that affect, constrain and characterize organizational resource behavior as the basis for performance predictions at the level of actual persons and actual organizations. It creates a bridge between static architectural definitions and behavior predictions through executable models.
Recommended Implementation: tabular format, SysML Parametric Diagram, SysML Block Definition Diagram



Commented [AM83]: UAF11-276 Diagram replaced by PersonnelDrivers.svg

2.4.9 View Specifications::Personnel::Traceability

Contains the diagrams that document the Personnel Traceability Viewpoint.

2.4.9.1 View Specifications::Personnel::Traceability::Personnel Traceability

Stakeholders: Systems Engineers, Enterprise Architects, Solution Providers, Business Architects
Concerns: traceability between operational activities and functions that implements them
Definition: depicts the mapping of functions (performed by organizational resources) to operational activities and thus identifies the transformation of an operational need into a purposeful function performed by an organizational resource or solution.
Recommended Implementation: Matrix format, SysML Block Definition Diagram

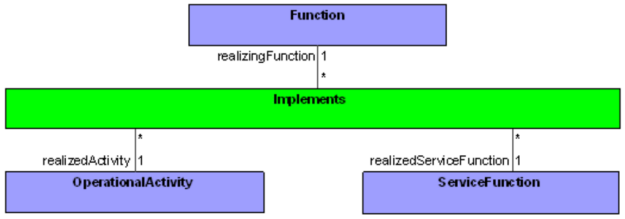

Figure 2.38 - Personnel Traceability

Elements

- Function
- Implements
- OperationalActivity
- ServiceFunction

2.5 View Specifications::Resources

Stakeholders: Systems Engineers, Resource Owners, Implementers, Solution Providers, IT Architects
Concerns: definition of solution architectures to implement operational requirements
Definition: captures a solution architecture consisting of resources, e.g., organizational, software, artifacts, capability configurations, natural resources that implement the operational requirements. Further design of a resource is typically detailed in SysML or UML.

2.5.1 View Specifications::Resources::Taxonomy

Contains the diagrams that document the Resources Taxonomy Viewpoint.

2.5.1.1 View Specifications::Resources::Taxonomy::Resources Taxonomy

Stakeholders: Solution Providers, Systems Engineers, IT Architects, Implementers
Concerns: resource types
Definition: shows the taxonomy of types of resources.
Recommended Implementation: SysML Block Definition Diagram

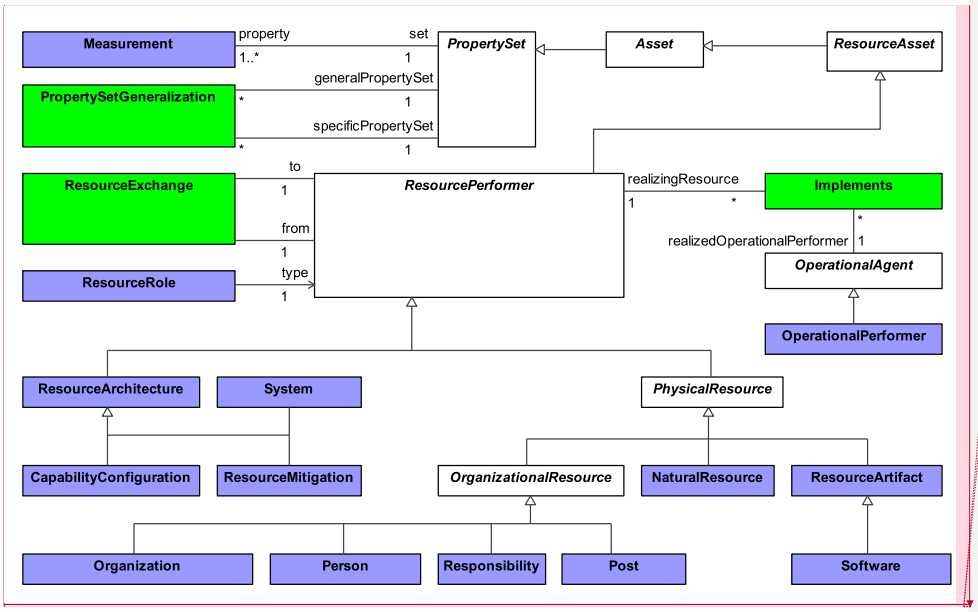

Figure 2.39 - Resources Taxonomy

Commented [AM91]: UAF11-276 Figure 2.39 - Resources Taxonomy replaced by Resources_Taxonomy.svg.

Commented [AM92]: UAF11-276 ResourceAsset added to the list of Elements

2.5.2 View Specifications::Resources::Structure

Contains the diagrams that document the Resources Structure Viewpoint.

2.5.2.1 View Specifications::Resources::Structure::Resources Structure

Stakeholders: Systems Engineers, Resource Owners, Implementers, Solution Providers
Concerns: reference the resource structure, connectors and interfaces in a specific context
Definition: defines the physical resources, e.g., capability configuration(s)/system(s) and interactions necessary to implement a specific set of OperationalPerformer(s). Can be used to represent communications networks and pathways that link communications resources and provides details regarding their configuration.
Recommended Implementation: SysML Internal Block Diagram, SysML Bock Definition Diagram

Commented [AM93]: UAF11-276 Text added ", SysML Block Definition Diagram."

Deleted: SysML Internal Block Diagram

2.5.4 View Specifications::Resources::Processes

Contains the diagrams that document the Resources Processes Viewpoint.

2.5.4.1 View Specifications::Resources::Processes::Resources Processes

Stakeholders: Solution Providers, Systems Engineers, IT Architects
Concerns: captures activity based behavior and flows
Definition: describes the functions that are normally conducted in the course of implementing operational activity(ies) in support of capability(ies). It describes the functions, their Inputs/Outputs, function actions and flows between them.
Recommended Implementation: SysML Activity Diagram, SysML Block Definition Diagram

Deleted: • Activity

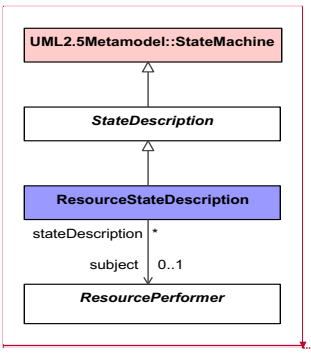
2.5.5 View Specifications::Resources::States

Contains the diagrams that document the Resources States Viewpoint.

2.5.5.1 View Specifications::Resources::States::Resources States

Stakeholders: Systems Engineers, Software Engineers
Concerns: capture state-based behavior of a resource
Definition: it is a graphical representation of states of a resource and how that resource responds to various events and actions.
Recommended Implementation: SysML State Machine Diagram

Commented [AM101]: UAF11-5 Text "Machine" added.



Commented [AM102]: UAF11-5 Diagram replaced by Resources_States.svg.

2.5.7 View Specifications::Resources::Constraints

Contains the diagrams that document the Resources Constraints Viewpoint.

2.5.7.1 View Specifications::Resources::Constraints::Resources Constraints

Stakeholders: Systems Engineers, IT Architects, Solution Providers, Implementers
Concerns: define limitations, constraints and performance parameters for resources, their interactions, performed functions, and data
Definition: specifies traditional textual rules/non-functional requirements that are constraints on resources, their interactions, performed functions, and data. The addition of SysML parametrics provide a computational means of defining resource constraints within a specific context.
Recommended Implementation: tabular format, SysML Block Definition Diagram, SysML Parametric Diagram, OCL

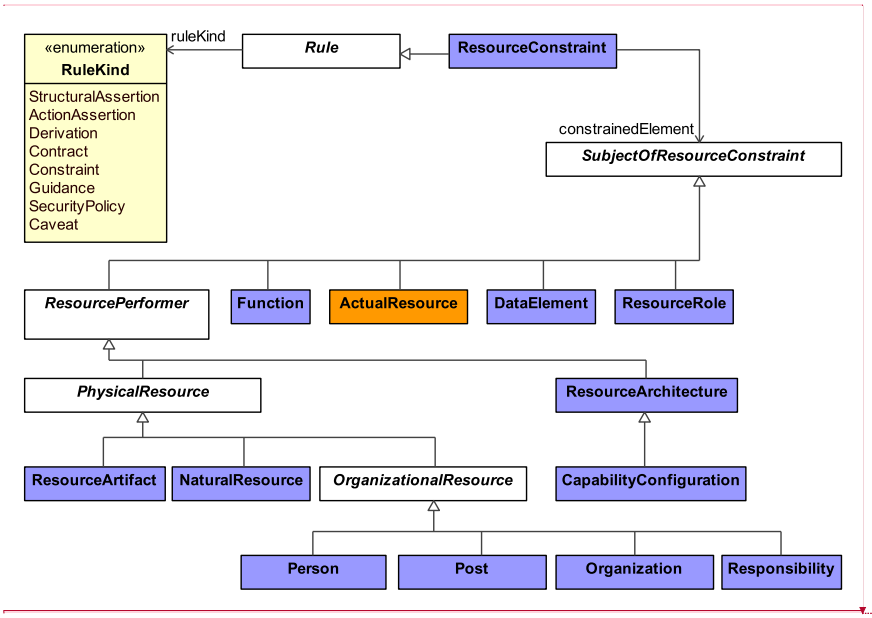

Figure 2.45 - Resources Constraints

Deleted: • ConstraintBlock¶

2.5.8 View Specifications::Resources::Roadmap

Contains the diagrams that document the Resources Roadmap Viewpoint.

2.5.8.1 View Specifications::Resources::Roadmap::Resources Roadmap: Evolution

Stakeholders: Systems Engineers, IT Architects, Solution Providers, Implements
Concerns: resource structure changes over time
Definition: provides an overview of how a resource structure changes over time. It shows the structure of several resources mapped against a timeline.
Recommended Implementation: timeline, SysML Block Definition Diagram, SysML Internal Block Diagram

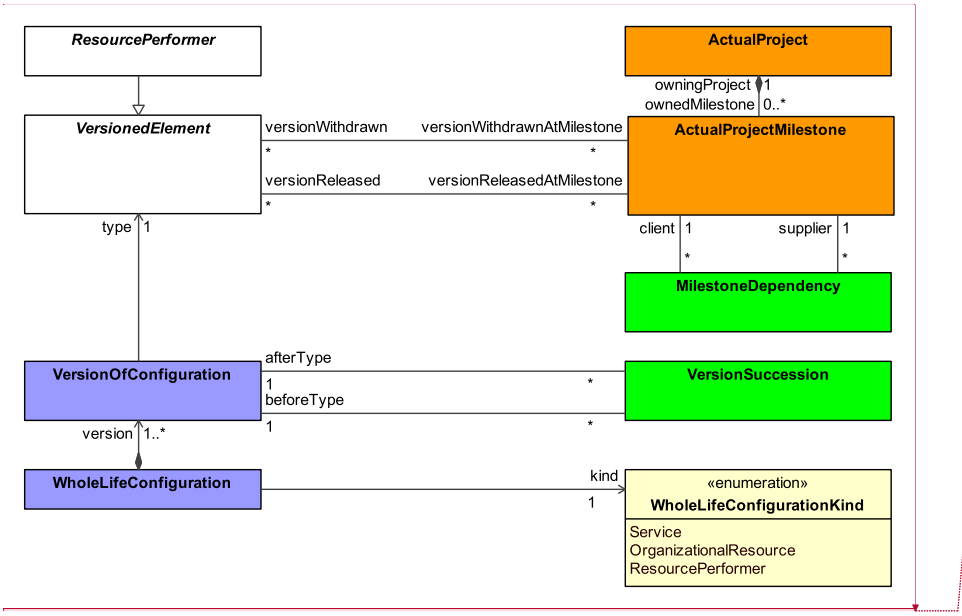

Figure 2.46 - Resources Roadmap: Evolution

Elements

- ActualProject
- ActualProjectMilestone
- MilestoneDependency
- ResourcePerformer
- VersionedElement
- VersionOfConfiguration

2.5.9 View Specifications::Resources::Traceability

Contains the diagrams that document the Resources Traceability Viewpoint.

2.5.9.1 View Specifications::Resources::Traceability::Resources Traceability

Stakeholders: Systems Engineers, Enterprise Architects, Solution Providers, Business Architects
Concerns: traceability between operational activities and functions that implements them
Definition: depicts the mapping of functions to operational activities and thus identifies the transformation of an operational need into a purposeful function performed by a resource or solution.
Recommended Implementation: Matrix format, SysML Block Definition Diagram

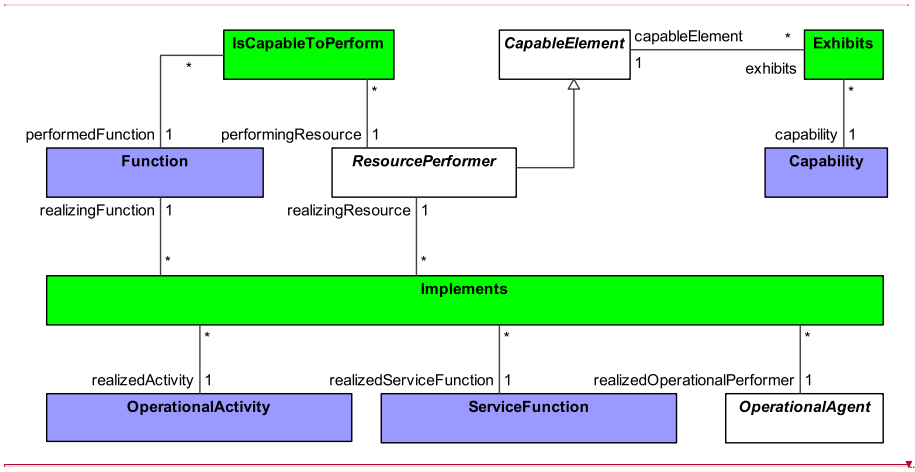

Figure 2.48 - Resources Traceability

Elements

- Capability
- CapableElement

specific security concerns.

2.6.1 View Specifications::Security::Taxonomy

Contains the diagrams that document the Security Taxonomy Viewpoint.

2.6.1.1 View Specifications::Security::Taxonomy::Security Taxonomy

Stakeholders: Security Architects, Security Engineers. Systems Engineers, Operational Architects
Concerns: Security assets and security enclaves
Definition: Defines the hierarchy of security assets and asset owners that are available to implement security, security constraints (policy, guidance, laws and regulations) and details where they are located (security enclaves).
Recommended Implementation: SysML Internal Block Diagram, SysML Block Definition Diagram

2.6.2 View Specifications::Security::Structure

Contains the diagrams that document the Security Structure Viewpoint.

2.6.2.1 View Specifications::Security::Structure::Security Structure

Stakeholders: Security Architects, Security Engineers, Systems Engineers, Operational Architects
Concerns: The structure of security information and where it is used at the operational and resource level
Definition: Captures the allocation of assets (operational and resource, information and data) across the security enclaves, shows applicable security controls necessary to protect organizations, systems and information during processing, while in storage (bdd), and during transmission (flows on an ibd). This view also captures Asset Aggregation and allocates the usage of the aggregated information at a location through the use of the SecurityProperty.
Recommended Implementation: SysML Internal Block Diagram, SysML Block Definition Diagram

2.6.3 View Specifications::Security::Connectivity

Contains the diagrams that document the Security Connectivity Viewpoint.

2.6.3.1 View Specifications::Security::Connectivity::Security Connectivity

Stakeholders: Security Architects, Security Engineers
Concerns: Addresses the security constraints and information assurance attributes that exist on exchanges across resources and across performers.
Definition: Lists security exchanges across security assets; the applicable security controls; and the security enclaves that house the producers and consumers of the exchanges. Measurements can optionally be included.
Recommended Implementation: SysML Internal Block Diagram, tabular format.

Commented [AM119]: UAF11-1 Text added to explain UAF metamodel relationship to the BPMN metamodel.

2.6.4 View Specifications::Security::Processes

Contains the diagrams that document the Security Processes Viewpoint.

2.6.4.1 View Specifications::Security::Processes::Security Processes

Stakeholders: Security Architects, Security Engineers
Concerns: The specification of the Security Control families, security controls, and measures required to address a specific security baseline.
Definition: Provides a set of Security Controls and any possible enhancements as applicable to assets. The activity diagram describes operational or resource level processes that apply (operational level) or implement (resource level) security controls/enhancements to assets located in enclaves and across enclaves. This Security Process view can be instantiated either as a variant of an activity/flow diagram or as a hierarchical work breakdown structure.
Recommended Implementation: SysML Activity Diagram, SysML Block Definition Diagram, BPMN Process Diagram as described in Operational Processes and Resources Processes sections.

2.6.5 View Specifications::Security::Constraints

Contains the diagrams that document the Security Constraints Viewpoint.

2.6.5.1 View Specifications::Security::Constraints::Security Constraints

Stakeholders: Security Architects, Security Engineers, Risk Analysts
Concerns: (i) Security-related policy, guidance, laws and regulations as applicable to assets, (ii) threats, vulnerabilities, and risk assessments as applicable to assets
Definition: (i) Specifies textual rules/non-functional requirements that are security constraints on resources, information and data (e.g., security-related in the form of rules (e.g., access control policy). A common way of representing access control policy is through the use of XACML (eXtensible Access Control Markup Language), it is expected that implementations of UAF allow users to link security constraints to external files represented in XACML. (ii) Identifies risks, specifies risk likelihood, impact, asset criticality, other measurements and enables risk assessment.
Recommended Implementation: tabular or Matrix format, SysML Block Definition Diagram, SysML Parametric Diagram, or OCL

2.6.6 View Specifications::Security::Traceability

Contains the diagrams that document the Security Traceability Viewpoint.

2.6.6.1 View Specifications::Security::Traceability::Security Traceability

Stakeholders: Security Architects, Security Engineers, Risk Analysts
Concerns: traceability between risk and risk owner, risk mitigations, and affected asset roles
Definition: depicts the mapping of a risk to each of the following: risk owner, risk mitigations, and affected asset roles.
Recommended Implementation: Matrix format, SysML Block Definition Diagram.

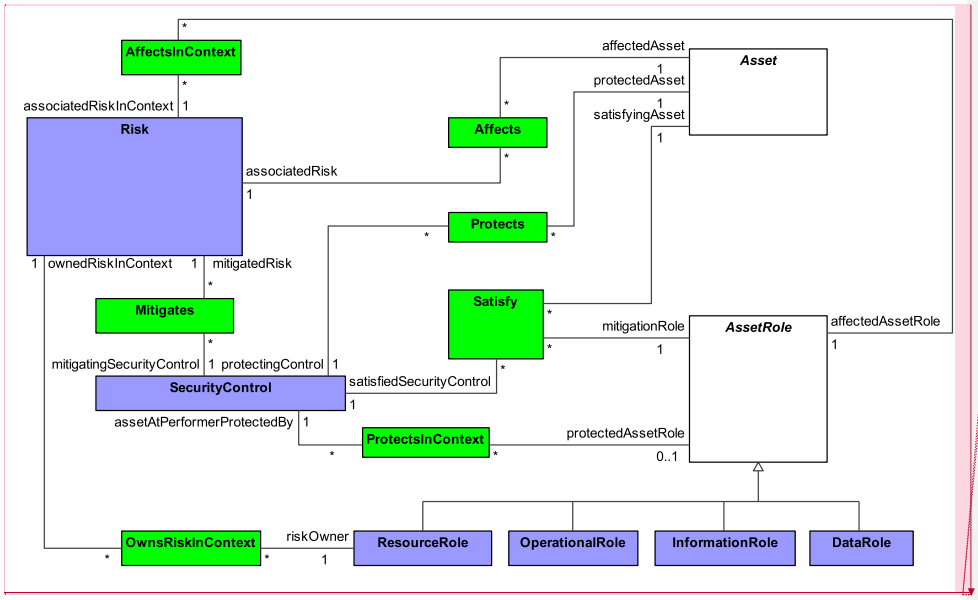

Figure 2.54 - Security Traceability

2.9 View Specifications::Actual Resources

Stakeholders: Solution Providers, Systems Engineers, Business Architects, Human Resources
Concerns: the analysis, e.g., evaluation of different alternatives, what-if, trade-offs, V&V on the actual resource configurations.
Definition: illustrates the expected or achieved actual resource configurations and actual relationships between them.

2.9.1 View Specifications::Actual Resources::Taxonomy

Contains the diagrams that document the Actual Resources Taxonomy Viewpoint.

2.9.1.1 View Specifications::Actual Resources::Taxonomy::Actual Resources Taxonomy

Stakeholders: Solution Providers, Systems Engineers, Human Resources, Business Architects
Concerns: the hierarchy of control within actual organizations, between actual posts and actual persons filling those actual posts that affect the architecture and how it is used. It is the instance version of the personnel structure which defines the types of organizations and post, etc.
Definition: illustrates the actual organizational structure and relationships among actual organizations, actual posts, and actual persons filling those actual post, that are the key players in the architecture.
Recommended Implementation: SysML Block Definition Diagram, SysML Internal Block Diagram

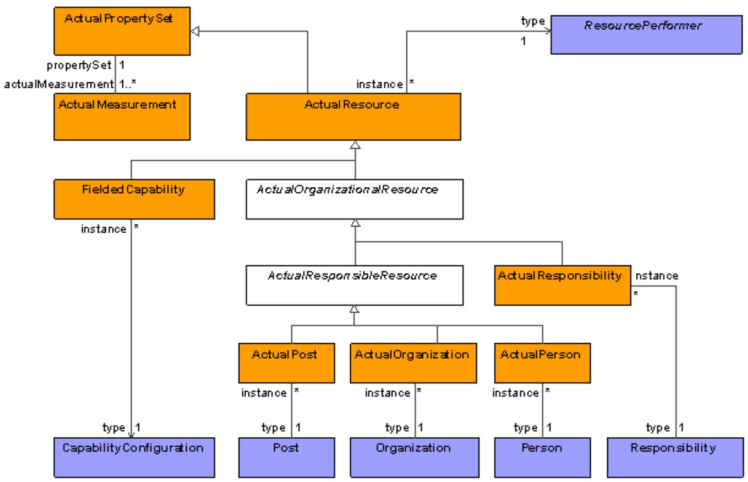

Figure 2.65 - Actual Resources Taxonomy

2.9.2 View Specifications::Actual Resources::Structure

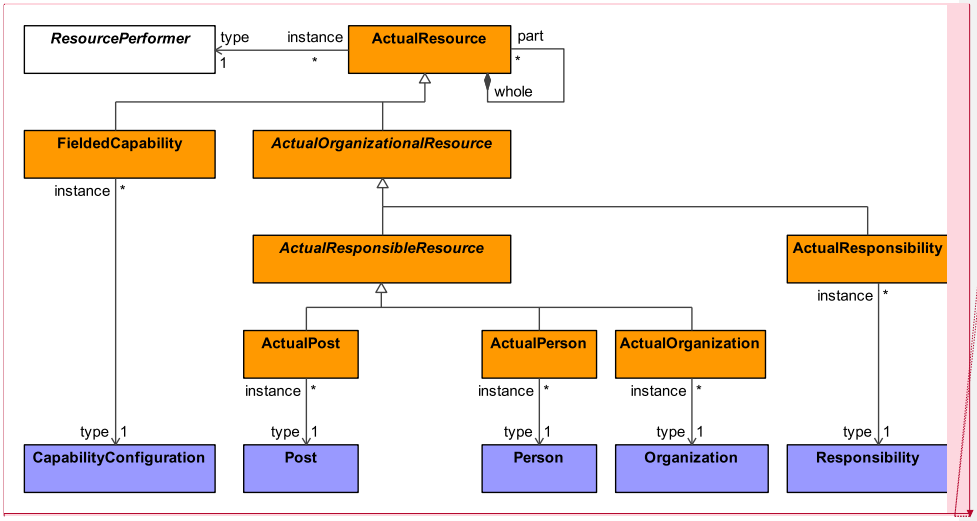
Contains the diagrams that document the Actual Resources Structure Viewpoint.

2.9.2.1 View Specifications::Actual Resources::Structure::Actual Resources Structure

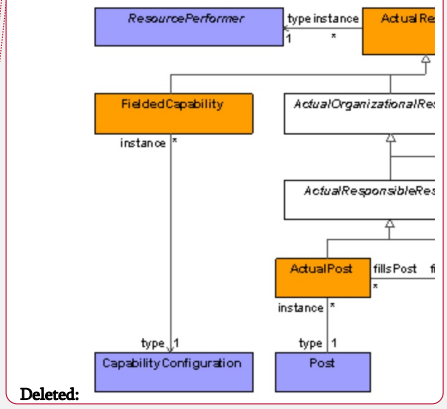
Stakeholders: Solution Providers, Systems Engineers, Business Architects.
Concerns: the analysis, e.g. evaluation of different alternatives, what-if, trade-offs, V&V on the actual resource configurations as it provides a means to capture different solution architectures. The detailed analysis (trade-off, what-if etc.) is carried out using the Resource Constraints view.
Definition: illustrates the expected or achieved actual resource configurations required to meet an operational need.
Recommended Implementation: SysML Block Definition Diagram.

Commented [AM137]: UAF11-276 – "SysML Internal Block Diagram" removed from Recommended Implementations list.

Deleted: Stakeholders: Solution Providers, Systems Engineers, Business Architects¶
Concerns: the analysis, e.g., evaluation of different alternatives, what-if, trade-offs, V&V on the actual resource configurations as it provides a means to capture different solution architectures. The detailed analysis (trade-off, what-if, etc.) is carried out using the Resource Constraints view.¶
Definition: illustrates the expected or achieved actual resource configurations required to meet an operational need.
Recommended Implementation: SysML Block Definition Diagram, SysML Internal Block Diagram¶



Commented [AM138]: UAF11-276 diagram replaced by Actual_Resources_Structure.svg



Deleted:

2.10 View Specifications::Dictionary

Stakeholders: Architects, users of the architecture, Capability Owners, Systems Engineers, Solution Providers
Concerns: Definitions for all the elements in the architecture, libraries of environments and measurements
Definition: Presents all the elements used in an architecture. Can be used specifically to capture:

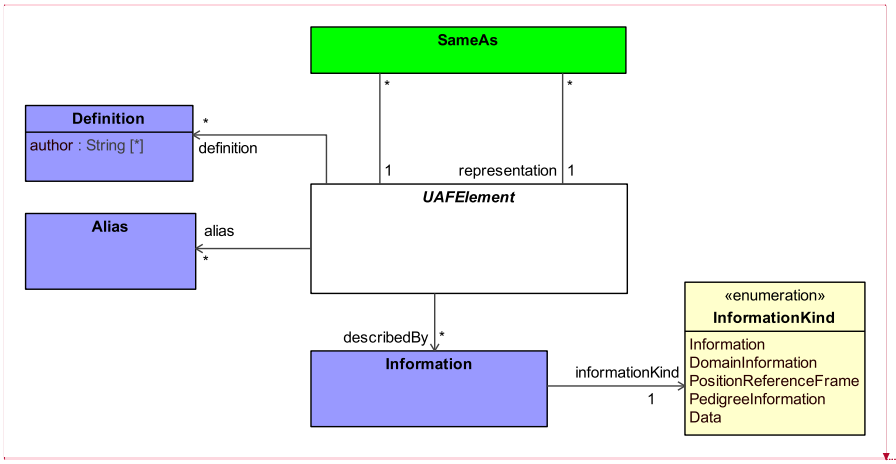
a. elements and relationships that are involved in defining the environments applicable to capability, operational concept, or set of systems.
b. measurable properties that can be used to support analysis such as KPIs, MoEs, TPIs, etc.

2.10.1 View Specifications::Dictionary::Dictionary

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects
Concerns: provides a central reference for a given architecture's data and metadata. It enables the set of architecture description to stand alone, with minimal reference to outside resources.
Definition: contains definitions of terms used in the given architecture. It consists of textual definitions in the form of a glossary, their taxonomies, and their metadata (i.e., data about architecture data), including metadata for any custom-tailored views. Architects should use standard terms where possible (i.e., terms from existing, approved dictionaries, glossaries, and lexicons).
Recommended Implementation: text, table format

Commented [AM142]: UAF11-276 Dot added at the end of sentence.

Commented [AM143]: UAF11-276 diagram replaced by Dictionary.svg



Deleted:

2.11 View Specifications::Summary & Overview

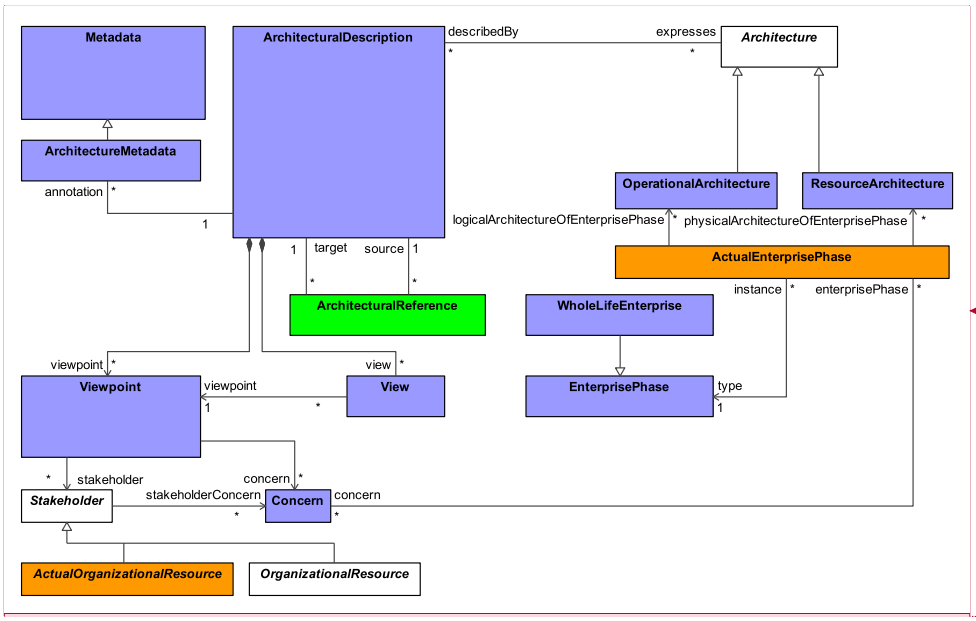
Stakeholders: Executives, PMs, Enterprise Architects
Concerns: executive-level summary information in a consistent form
Definition: provides executive-level summary information in a consistent form that allows quick reference and comparison between architectural descriptions. Includes assumptions, constraints, and limitations that may affect high-level decisions relating to an architecture-based work programme.

2.11.1 View Specifications::Summary & Overview::Summary & Overview

Stakeholders: Decision makers, Solution Providers, Systems Engineers, Software Architects, Business Architects Concerns: quick overview of an architecture description and summary of analysis. In the initial phases of architecture development, it serves as a planning guide. Upon completion of an architecture, it provides a summary of findings, and any conducted analysis.

Definition: provides executive-level summary information in a consistent form that allows quick reference and comparison among architectures. The Summary and Overview includes assumptions, constraints, and limitations that may affect high-level decision processes involving the architecture.

Recommended Implementation: text, free form diagram, table format



Deleted: <object>

Commented [AM145]: UAF11-276 Figure 2.69 - Summary & Overview diagram replaced by Summary_&_Overview.svg

2.12 View Specifications::Requirements

Stakeholders: Requirement Engineers, Solution Providers, Systems Engineers, Software Engineers, Systems Architects, Business Architects
Concerns: requirements traceability
Definition: used to represent requirements, their properties, and relationships (trace, verify, satisfy, refine) to UAF architectural elements.

2.12.1 View Specifications::Requirements::Requirements

Stakeholders: Requirement Engineers, Solution Providers, Systems Engineers, Software Engineers, Systems Architects, Business Architects
Concerns: provides a central reference for a set of stakeholder needs expressed as requirements, their relationship (via traceability) to more detailed requirements and the solution described by the architecture that will meet those requirements.
Definition: used to represent requirements, their properties, and relationships (trace, verify, satisfy, refine) between each other and to UAF architectural elements.
Recommended Implementation: SysML Requirement Diagram, tabular format, matrix format

2.15 View Specifications::Other

Contains the diagrams that document the use of BPMN, NIEM, IEPPV in the context of UAF.

2.15.1 View Specifications::Other::BPMN

Stakeholders: Business Architects, Enterprise Architects
Concerns: captures activity based behavior and flows.
Definition: describes the activities that are normally conducted in the course of achieving business goals that support a capability. It describes operational activities, their Inputs/Outputs, operational activity actions and flows between them using BPMN.
Recommended Implementation: BPMN Process Diagram

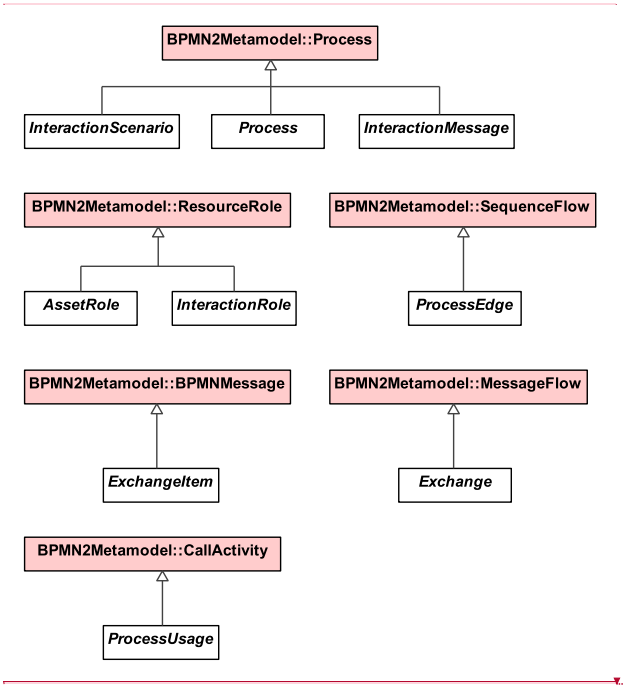

Figure 2.74 - BPMN

Elements

2.15.2 View Specifications::Other::IEPPV

Stakeholders: Data Modelers, Solution Providers, Systems Engineers, Software Engineers, Systems Architects, Business Architects, information architects
Concerns: information exchanges, information interfaces, information interoperability, information sharing and safeguarding
Definition: UAFP supports information modeling and traceability to IEPPV model elements using the IEPPV-defined elements: Message, SemanticElement, and FilteredSemanticElement, used to represent data, properties/attributes, structure, format, and relationships. The IEPPV profile enables the specification of the policies, rules and constraints governing the packaging (assembly, transformation, marking, redaction) of data elements conforming to information sharing and safeguarding requirements. The IEPPV profile also governs the processing (parsing, transformation, and marshalling) received information and data element.
Recommended Implementation: UML Class Diagram, SysML Block Diagram

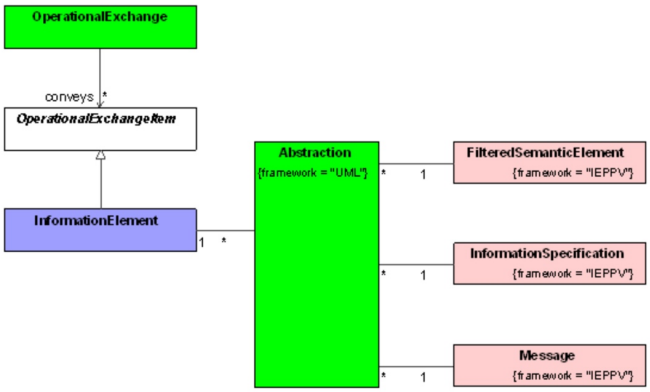

Figure 2.75 - IEPPV

Elements

- Abstraction
- FilteredSemanticElement
- InformationElement
- InformationSpecification

- OperationalExchange
- OperationalExchangeItem

2.15.3 View Specifications::Other::NIEM

Stakeholders: Data Modelers, Solution Providers, Systems Engineers, Software Engineers, Systems Architects, Business Architects
Concerns: information exchanges, information interoperability, data schema
Definition: A specification representing the structure, semantics, and relationships of data objects that satisfy an information exchange requirement. Used for organizing and packaging Model Package Descriptions (MPDs) and Information Exchange Package Documentation (IEPD) as defined by the National Information Exchange Model (NIEM). An IEPD is a type of MPD. The NIEM MPD defines an Enterprise Information Exchange Model (EIEM) as an MPD that contains NIEM-conforming schemas that define and declare data components to be consistently reused in the IEPDs of an enterprise. An EIEM is a collection of schemas organized into a collection of subset schemas and one or more extension schemas. An information sharing enterprise creates and maintains an EIEM.
Recommended Implementation: UML Class Diagram, SysML Block Diagram

0 9 Domain Metamodel (DMM) Elements

Formatted: Heading 1, Indent: Left: 0 cm, Right: 0 cm, Space Before: 0 pt, Tab stops: Not at 0.99 cm

Deleted: 3

9.1 Domain MetaModel

Deleted: 3

This package contains the elements of the DMM.

8.1.3 Domain MetaModel::Metadata

Commented [AM156]: UAF11-276 Every subsection in the section updated by adding individual diagrams for all UAF Domain Metamodel Elements.

Formatted: Heading 3, Outline numbered + Level: 3 + Numbering Style: 1, 2, 3, … + Start at: 1 + Alignment: Left + Aligned at: 0 cm + Indent at: 0.63 cm

Stakeholders: Enterprise Architects, people who want to discover the architecture, Technical Managers.
Concerns: Captures meta-data relevant to the entire architecture
Definition: Provide information pertinent to the entire architecture. Present supporting information rather than architectural models.

Domain MetaModel::Metadata::Taxonomy

ArchitectureMetadata

Package: Taxonomy
isAbstract: No
Generalization: Metadata

Description
Information associated with an ArchitecturalDescription, that supplements the standard set of tags used to summarize the Architecture. It states things like what methodology was used, notation, etc.

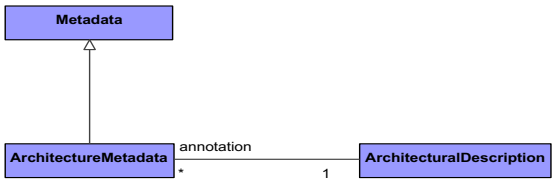

Figure 9:1 - ArchitectureMetadata

InteractionScenarioGeneralization

Package: Taxonomy
isAbstract: No
Generalization: UML2.5Metamodel::Generalization, MeasurableElement

Description
A InteractionScenarioGeneralization is a taxonomic relationship between a more general InteractionScenario and a more specific InteractionScenario.

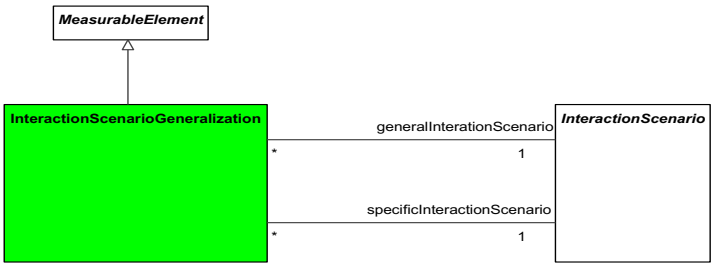

Figure 9:2 - InteractionScenarioGeneralization

Metadata

Package: Taxonomy

isAbstract: No

Generalization: MeasurableElement

Description

A comment that can be applied to any element in the architecture. The attributes associated with this element details the relationship between the element and its related dublinCoreElement, metaDataScheme, category and name. This allows the element to be referenced using the Semantic Web.

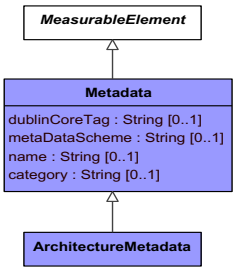

Figure 9:3 - Metadata

Attributes

category : String[0..1]	Defines the category of a Metadata element example: http://purl.org/dc/terms/abstract.
dublinCoreTag : String[0..1]	A metadata category that is a DublinCore tag.
metaDataScheme : String[0..1]	A representation scheme that defines a set of Metadata.
name : String[0..1]	The name of the Metadata.

ProcessGeneralization

Package: Taxonomy

isAbstract: No

Generalization: UML2.5Metamodel::Generalization, MeasurableElement

Description

A ProcessGeneralization is a taxonomic relationship between a more general Process and a more specific Process.

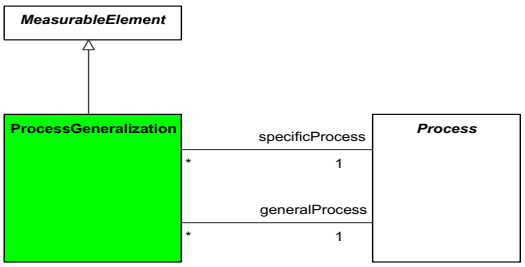

Figure 9:4 - ProcessGeneralization

PropertySetGeneralization

Package: Taxonomy

isAbstract: No

Generalization: UML2.5Metamodel::Generalization, MeasurableElement

Description

A PropertySetGeneralization is a taxonomic relationship between a more general PropertySet and a more specific PropertySet.

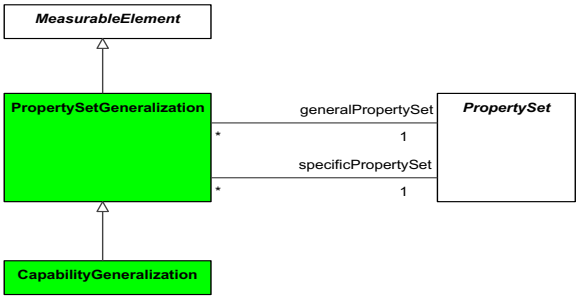

Figure 9:5 - PropertySetGeneralization

StateDescriptionGeneralization

Package: Taxonomy

isAbstract: No

Generalization: UML2.5Metamodel::Generalization, MeasurableElement

Description

A StateDescriptionGeneralization is a taxonomic relationship between a more general StateDescription and a more specific StateDescription.

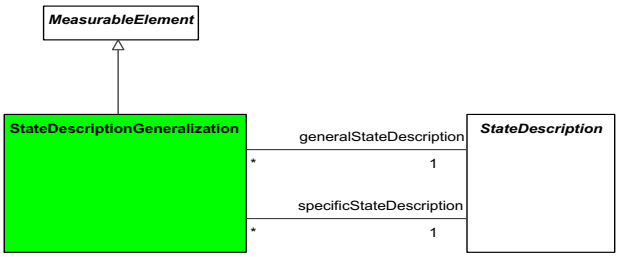

Figure 9:6 - StateDescriptionGeneralization

Domain MetaModel::Metadata::Structure

EnvironmentProperty

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

A property of an Environment that is typed by a Condition. The kinds of Condition that can be represented are Location, GeoPoliticalExtentType and Environment.

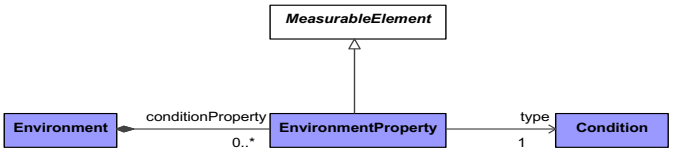

Figure 9:7 - EnvironmentProperty

Domain MetaModel::Metadata::Connectivity

Exchange

Package: Connectivity

isAbstract: Yes

Generalization: MeasurableElement, BPMN2Metamodel::MessageFlow, SubjectOfSecurityConstraint

Description

Abstract tuple, grouping OperationalExchanges and ResourceExchanges that exchange Resources.

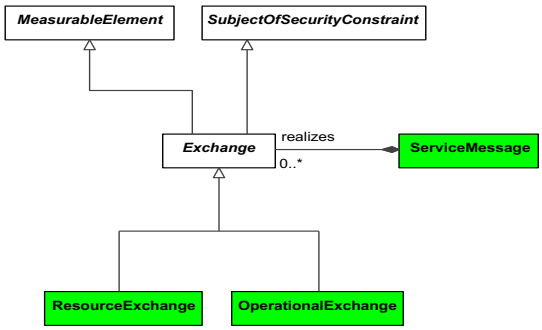

Figure 9:8 - Exchange

ExchangeItem

Package: Connectivity

isAbstract: Yes

Generalization: BPMN2Metamodel::BPMNMessage

Description

An abstract grouping for elements that defines the types of elements that can be exchanged between Assets and conveyed by an Exchange.

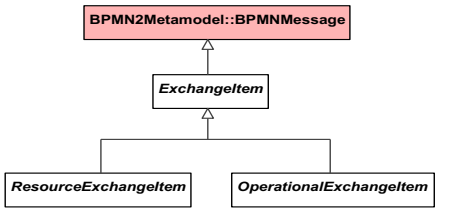

Figure 9:9 - ExchangeItem

Resource

Package: Connectivity

isAbstract: Yes

Generalization: PropertySet

Description

Abstract type grouping all elements that can be conveyed by an Exchange.

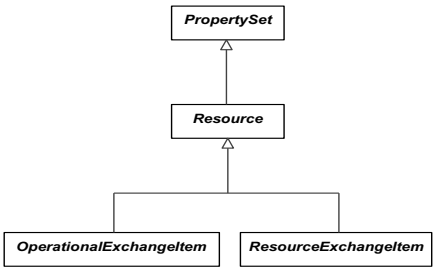

Figure 9:10 - Resource

Domain MetaModel::Metadata::Processes

ActivityPerformableUnderCondition

Package: Processes

isAbstract: No

Generalization: MeasurableElement

Description

The ActualCondition under which an Activity is performed.

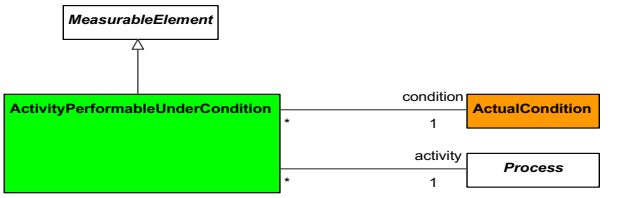

Figure 9:11 - ActivityPerformableUnderCondition

IsCapableToPerform

Package: Processes

isAbstract: No

Generalization: MeasurableElement

Description

A tuple defining the traceability between the structural elements to the Activities that they can perform.

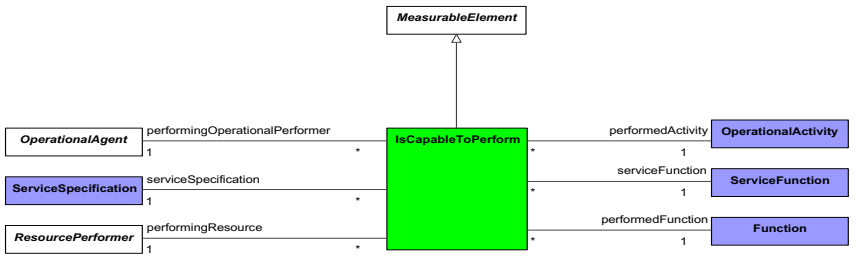

Figure 9:12 - IsCapableToPerform

PerformsInContext

Package: Processes

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that relates an OperationalAction to a OperationalRole, or a FunctionAction to a ResourceRole. It indicates that the action can be carried out by the role when used in a specific context or configuration.

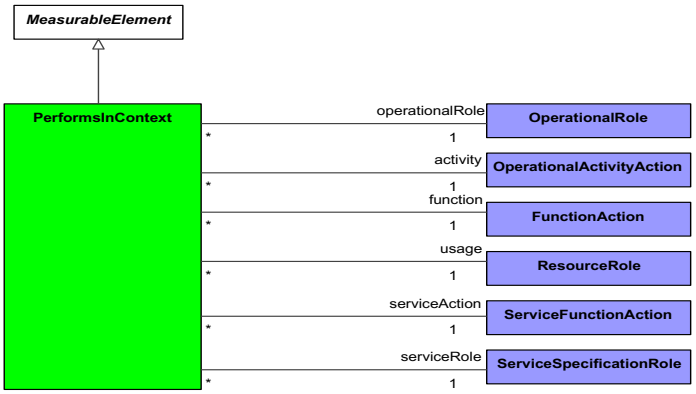

Figure 9:13 - PerformsInContext

Process

Package: Processes

isAbstract: Yes

Generalization: MeasurableElement, UML2.5Metamodel::Activity, BPMN2Metamodel::Process

Description

An abstract type that represents a behavior or process (i.e. a Function or OperationalActivity) that can be performed by a Performer.

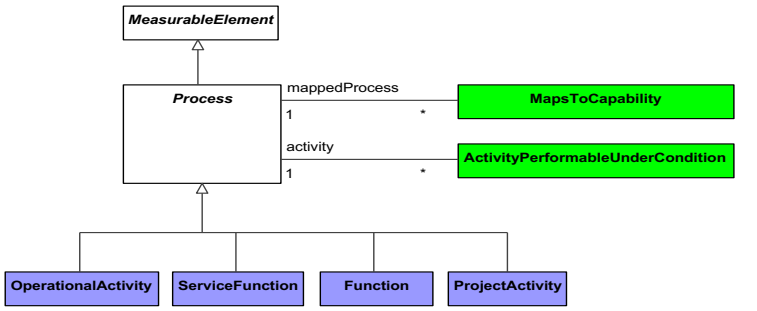

Figure 9:14 - Process

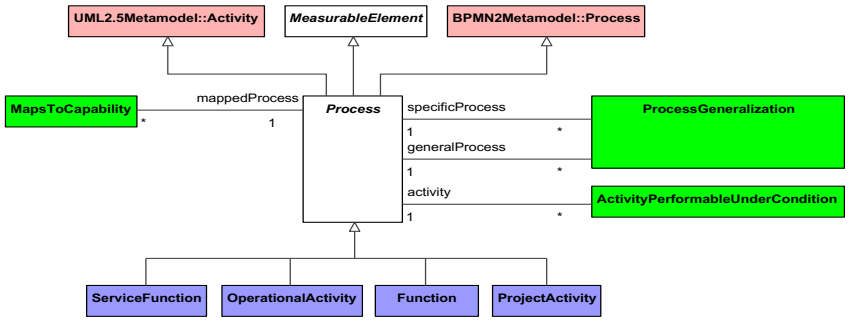

Figure 9:15 - Process

ProcessEdge

Package: Processes

isAbstract: Yes

Generalization: MeasurableElement, UML2.5Metamodel::Activity, UML2.5Metamodel::ActivityEdge, BPMN2Metamodel::SequenceFlow

Description

An abstract type that represents a behavior or process (i.e. a Function or OperationalActivity) that can be performed by a Performer.

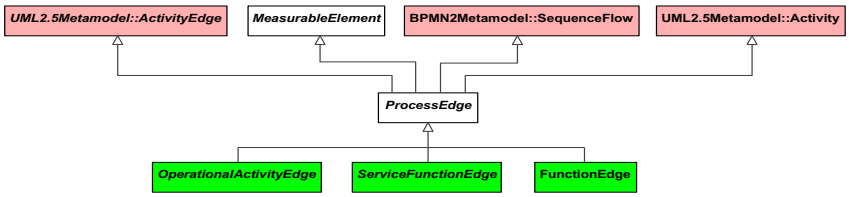

Figure 9:16 - ProcessEdge

ProcessOperation

Package: Processes

isAbstract: Yes

Generalization: MeasurableElement, UML2.5Metamodel::Activity, UML2.5Metamodel::Operation

Description

An abstract type that represents a behavior or process (i.e. a Function or OperationalActivity) that can be performed by a Performer.

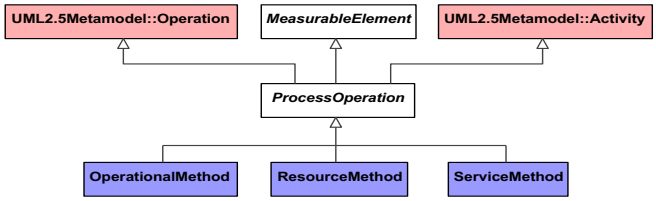

Figure 9:17 - ProcessOperation

ProcessParameter

Package: Processes

isAbstract: Yes

Generalization: MeasurableElement, UML2.5Metamodel::Activity, UML2.5Metamodel::CallBehaviorAction, UML2.5Metamodel::Parameter

Description

An abstract type that represents a behavior or process (i.e. a Function or OperationalActivity) that can be performed by a Performer.

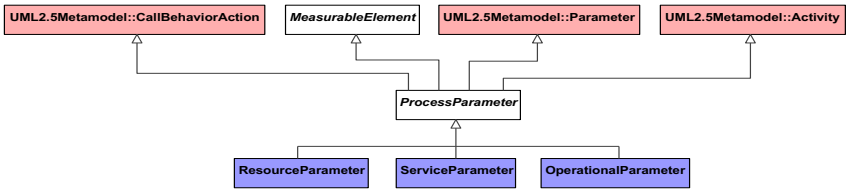

Figure 9:18 - ProcessParameter

ProcessUsage

Package: Processes

isAbstract: Yes

Generalization: MeasurableElement, UML2.5Metamodel::Activity, UML2.5Metamodel::CallBehaviorAction, BPMN2Metamodel::CallActivity

Description

An abstract type that represents a behavior or process (i.e. a Function or OperationalActivity) that can be performed by a Performer.

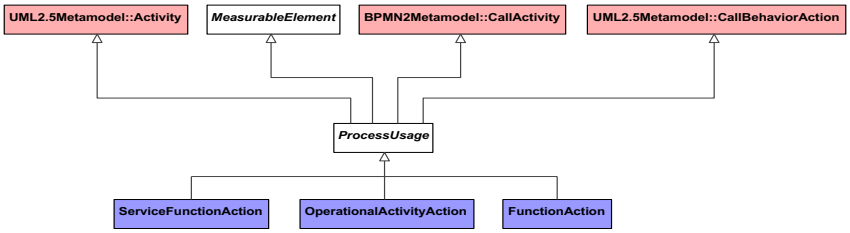

Figure 9:19 - ProcessUsage

Domain MetaModel::Metadata::States

StateDescription

Package: States

isAbstract: Yes

Generalization: UML2.5Metamodel::StateMachine

Description

An abstract type that represents a state machine (i.e. an OperationalStateDescription or ResourceStateDescription), depicting how the Asset responds to various events and the actions.

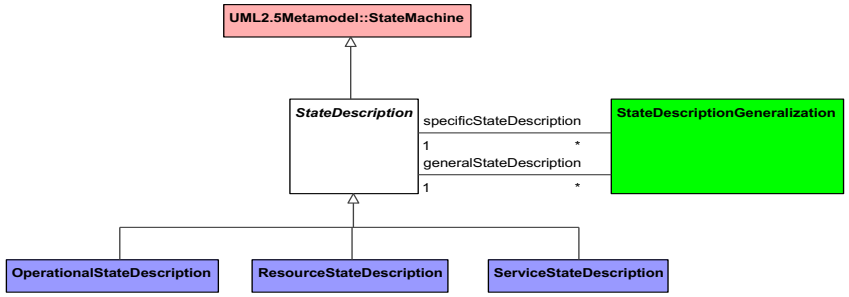

Figure 9:20 - StateDescription

Domain MetaModel::Metadata::Interaction Scenarios

InteractionMessage

Package: Interaction Scenarios

isAbstract: Yes

Generalization: MeasurableElement, UML2.5Metamodel::Activity, BPMN2Metamodel::Process, UML2.5Metamodel::Interaction, UML2.5Metamodel::Message

Description

An abstract type that groups several types of messages used in the InteractionScenario.

InteractionRole

Package: Interaction Scenarios

isAbstract: Yes

Generalization: BPMN2Metamodel::ResourceRole

Description

An abstract type that represents an individual participant in the InteractionScenario.

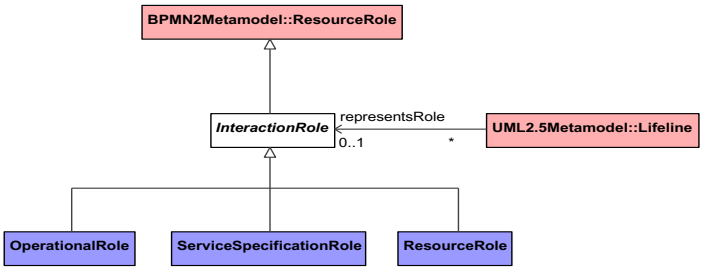

Figure 9:21 - InteractionRole

InteractionScenario

Package: Interaction Scenarios

isAbstract: Yes

Generalization: MeasurableElement, UML2.5Metamodel::Activity, BPMN2Metamodel::Process, UML2.5Metamodel::Interaction

Description

An abstract type that specifies interactions between Assets, like ResourcePerformers, and ServiceSpecifications.

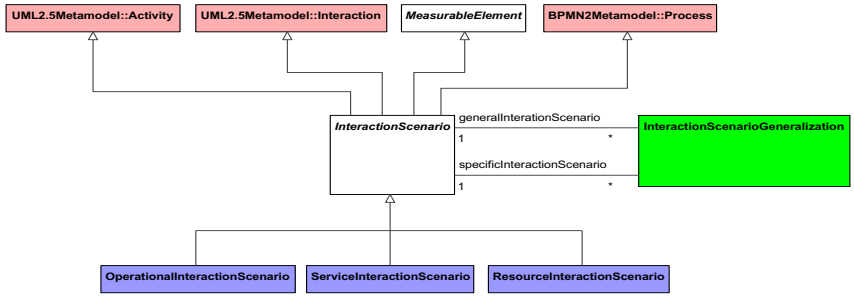

Figure 9:22 - InteractionScenario

Domain MetaModel::Metadata::Information

Information

Package: Information

isAbstract: No

Generalization: MeasurableElement

Description

A comment that describes the state of an item of interest in any medium or form -- and is communicated or received.

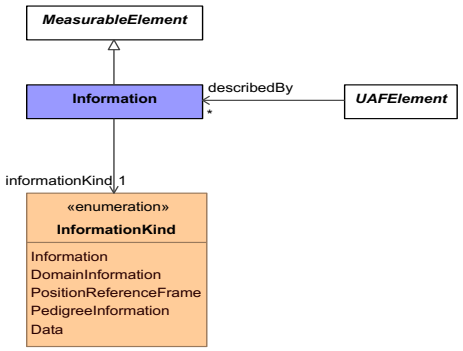

Figure 9:23 - Information

Domain MetaModel::Metadata::Constraints

Rule

Package: Constraints

isAbstract: Yes

Generalization: MeasurableElement

Description

An abstract type for all types of constraint (i.e. an OperationalConstraint could detail the rules of accountancy best practice).

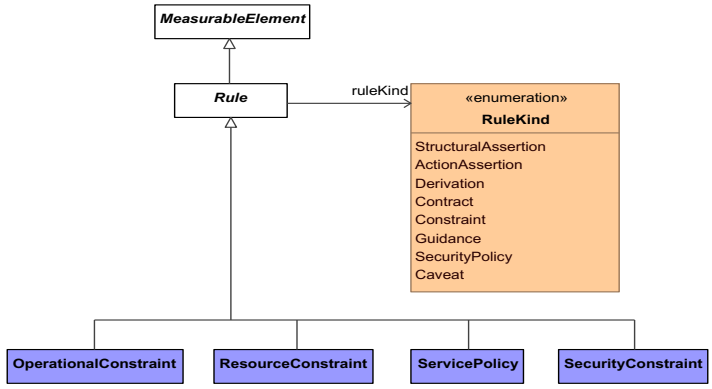

Figure 9:24 - Rule

Domain MetaModel::Metadata::Traceability

ArchitecturalReference

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that specifies that one architectural description refers to another.

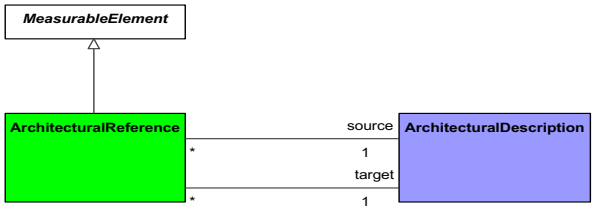

Figure 9:25 - ArchitecturalReference

Implements

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that defines how an element in the upper layer of abstraction is implemented by a semantically equivalent element (for example tracing the Functions to the OperationalActivities) in the lower level of abstraction.

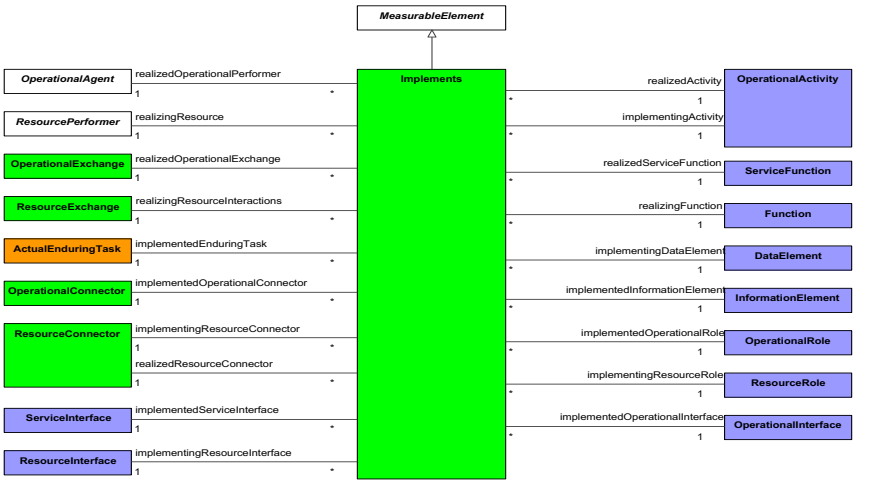

Figure 9:26 - Implements

8.1.4 Domain MetaModel::Strategic

Formatted: Heading 3

Domain MetaModel::Strategic::Taxonomy

Capability

Package: Taxonomy

isAbstract: No

Generalization: PropertySet, Desirer

Description

A high level specification of the enterprise's ability to execute a specified course of action.

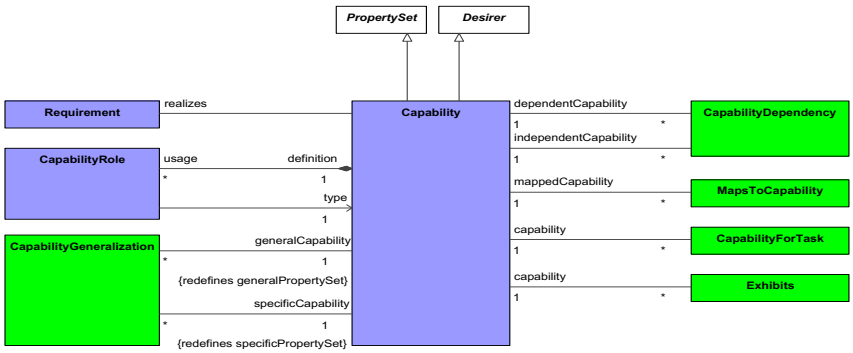

Figure 9:27 - Capability

CapabilityGeneralization

Package: Taxonomy

isAbstract: No

Generalization: PropertySetGeneralization

Description

A CapabilityGeneralization is a taxonomic relationship between a more general Capability and a more specific Capability.

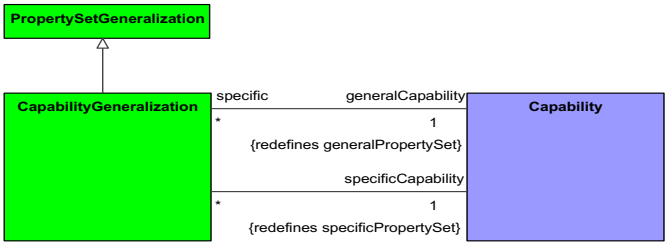

Figure 9:28 - CapabilityGeneralization

Domain MetaModel::Strategic::Structure

ActualEnduringTask

Package: Structure

isAbstract: No

Generalization: CapableElement, ActualPropertySet

Description

An actual undertaking recognized by an enterprise as being essential to achieving its goals - i.e. a strategic specification of what the enterprise does.

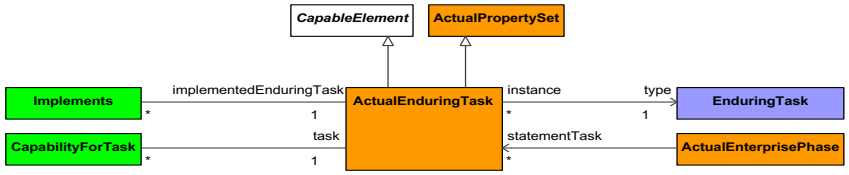

Figure 9:29 - ActualEnduringTask

ActualEnterprisePhase

Package: Structure

isAbstract: No

Generalization: CapableElement, ActualPropertySet, Achiever

Description

An individual that describes the phase of an actual enterprise endeavor.

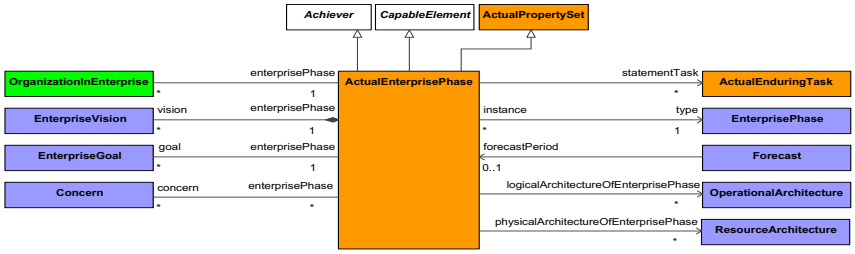

Figure 9:30 - ActualEnterprisePhase

CapabilityRole

Package: Structure

isAbstract: No

Generalization: PropertySet, Desirer, MeasurableElement

Description

A high level specification of the enterprise's ability to execute a specified course of action.

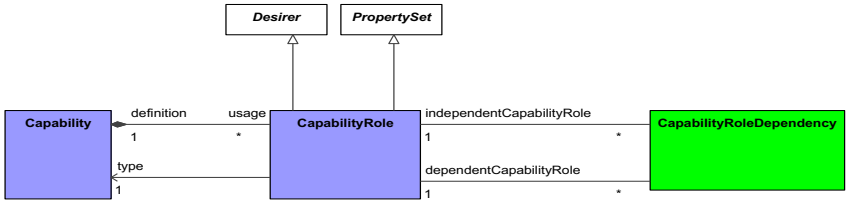

Figure 9:31 - CapabilityRole

EnduringTask

Package: Structure

isAbstract: No

Generalization: PropertySet

Description

A type of template behavior recognized by an enterprise as being essential to achieving its goals - i.e. a template for a strategic specification of what the enterprise does.

Figure 9:32 - EnduringTask

EnterpriseGoal

Package: Structure

isAbstract: No

Generalization: PropertySet

Description

A statement about a state or condition of the enterprise to be brought about or sustained through appropriate Means. An EnterpriseGoal amplifies an EnterpriseVision that is, it indicates what must be satisfied on a continuing basis to effectively attain the EnterpriseVision. BMM: OMG dtc-13-08-24.

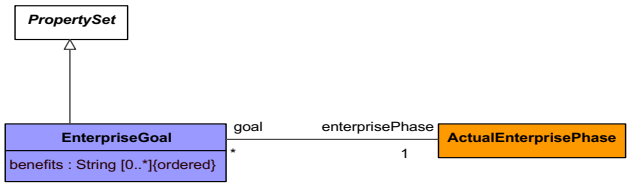

Figure 9:33 - EnterpriseGoal

Attributes

benefits :	String[0..*]	A description of the usefulness of the Goal in terms of why the state or condition of the Enterprise is worth attaining.

EnterprisePhase

Package: Structure

isAbstract: No

Generalization: PropertySet

Description

A type of a current or future state of the enterprise.

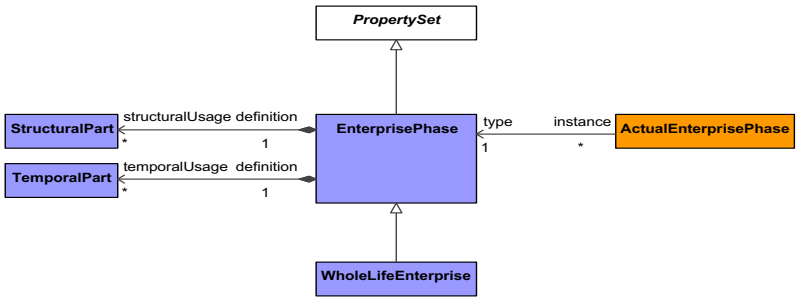

Figure 9:34 - EnterprisePhase

EnterpriseVision

Package: Structure

isAbstract: No

Generalization: PropertySet

Description

A Vision describes the future state of the enterprise, without regard to how it is to be achieved. BMM: OMG dtc-13-08-24.

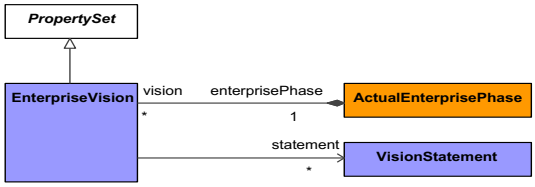

Figure 9:35 - EnterpriseVision

StructuralPart

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

A current or future state of the wholeLifeEnterprise or another EnterprisePhase.

Figure 9:36 - StructuralPart

TemporalPart

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

A current or future state of the wholeLifeEnterprise or another EnterprisePhase.

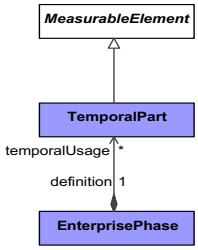

Figure 9:37 - TemporalPart

VisionStatement

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

A type of comment that describes the future state of the enterprise, without regard to how it is to be achieved. BMM: OMG dtc-13-08-24.

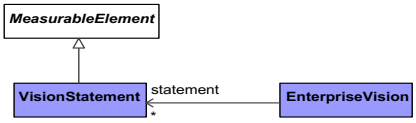

Figure 9:38 - VisionStatement

WholeLifeEnterprise

Package: Structure

isAbstract: No

Generalization: EnterprisePhase

Description

A WholeLifeEnterprise is a purposeful endeavor of any size involving people, organizations and supporting systems. It is made up of TemporalParts and StructuralParts.

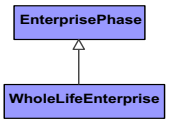

Figure 9:39 - WholeLifeEnterprise

Domain MetaModel::Strategic::Connectivity

CapabilityDependency

Package: Connectivity

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that one CapabilityDependency is dependent from another.

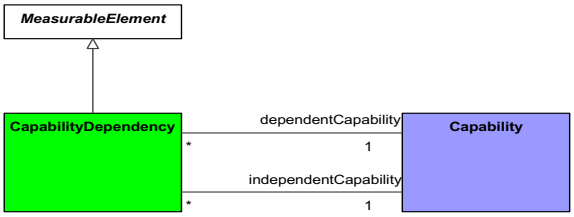

Figure 9:40 - CapabilityDependency

CapabilityRoleDependency

Package: Connectivity

isAbstract: No

Generalization: MeasurableElement

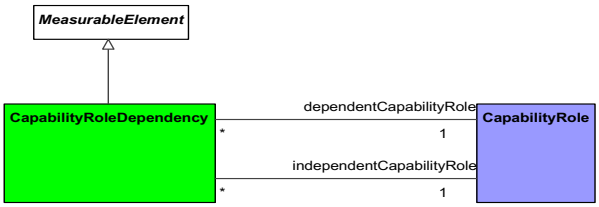

Figure 9:41 - CapabilityRoleDependency

Domain MetaModel::Strategic::States

AchievedEffect

Package: States

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that exists between an ActualState (e.g., observed/measured during testing) of an element that attempts to achieve a DesiredEffect and an Achiever.

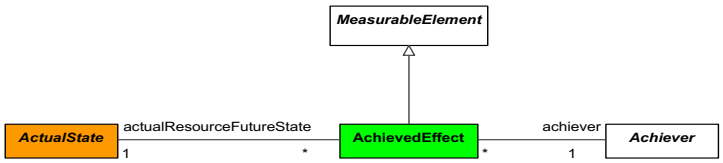

Figure 9:42 - AchievedEffect

Achiever

Package: States
isAbstract: Yes
Generalization: UAFElement

Description
An ActualResource, ActualProject or ActualEnterprisePhase that can deliver a DesiredEffect.

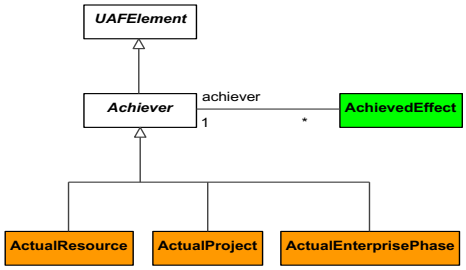

Figure 9:43 - Achiever

DesiredEffect

Package: States
isAbstract: No
Generalization: MeasurableElement

Description
A tuple relating the Desirer (a Capability or OrganizationalResource) to an ActualState.

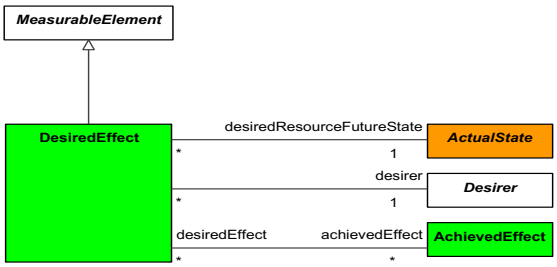

Figure 9:44 - DesiredEffect

Desirer

Package: States
isAbstract: Yes
Generalization: UAFElement

Description
Abstract type used to group architecture elements that might desire a particular effect.

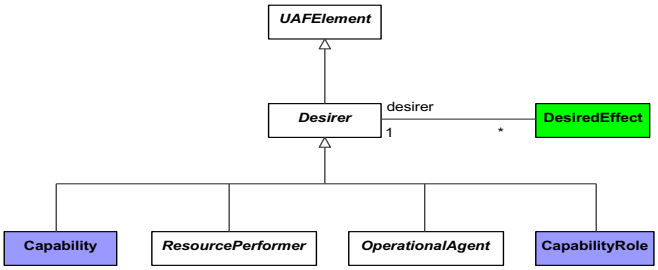

Figure 9:45 - Desirer

Domain MetaModel::Strategic::Traceability

CapabilityForTask

Package: Traceability
isAbstract: No
Generalization: MeasurableElement

Description
A tuple that asserts that a Capability is required in order for an Enterprise to conduct a phase of an EnduringTask.

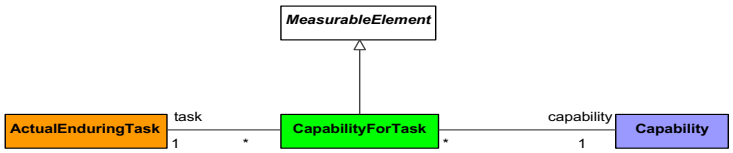

Figure 9:46 - CapabilityForTask

CapableElement

Package: Traceability
isAbstract: Yes
Generalization: UAFElement

Description
An abstract type that represents a structural element that can exhibit capabilities.

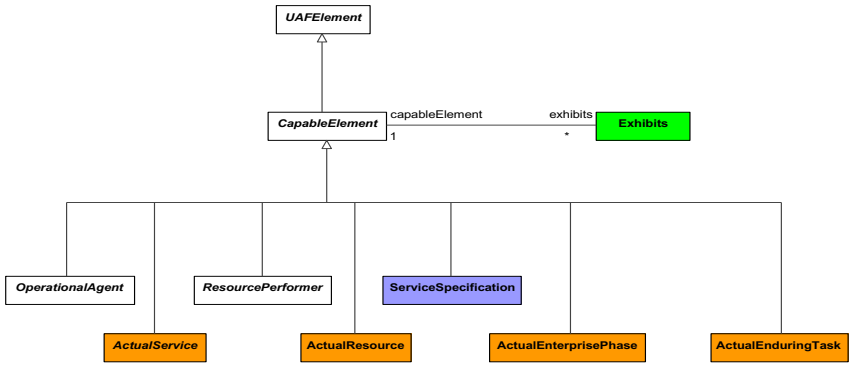

Figure 9:47 - CapableElement

Exhibits

Package: Traceability
isAbstract: No
Generalization: MeasurableElement

Description
A tuple that exists between a CapableElement and a Capability that it meets under specific environmental conditions.

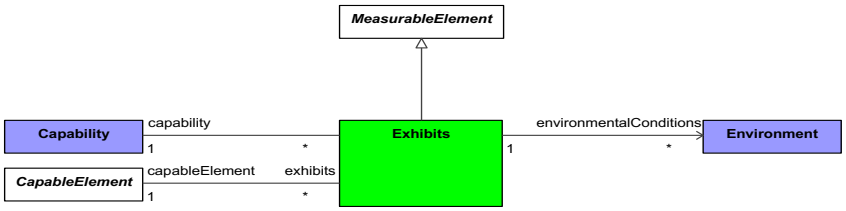

Figure 9:48 - Exhibits

MapsToCapability

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple denoting that an Activity contributes to providing a Capability.

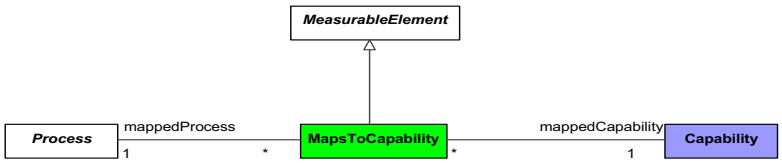

Figure 9:49 - MapsToCapability

OrganizationInEnterprise

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating an ActualOrganization to an ActualEnterprisePhase to denote that the ActualOrganization plays a role or is a stakeholder in an ActualEnterprisePhase.

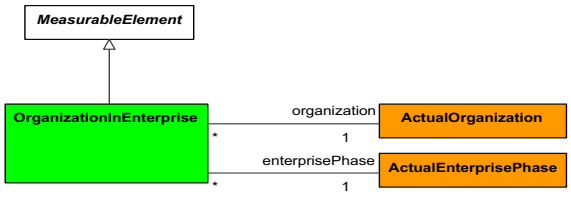

Figure 9:50 - OrganizationInEnterprise

8.1.5 Domain MetaModel::Operational

Formatted: Heading 3

Domain MetaModel::Operational::Taxonomy

ArbitraryConnector

Package: Taxonomy
isAbstract: No
Generalization: MeasurableElement

Description
Represents a visual indication of a connection used in high level operational concept diagrams.

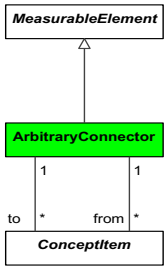

Figure 9:51 - ArbitraryConnector

ConceptItem

Package: Taxonomy
isAbstract: Yes
Generalization: UAFElement

Description
Abstract, an item which may feature in a HighLevelOperationalConcept.

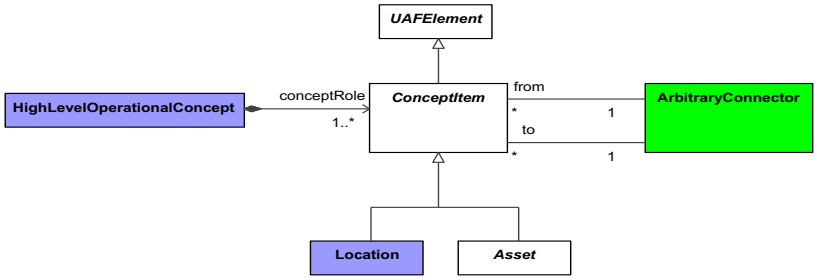

Figure 9:52 - ConceptItem

HighLevelOperationalConcept

Package: Taxonomy
isAbstract: No
Generalization: PropertySet

Description

Describes the Resources and Locations required to meet an operational scenario from an integrated systems point of view. It is used to communicate overall quantitative and qualitative system characteristics to stakeholders.

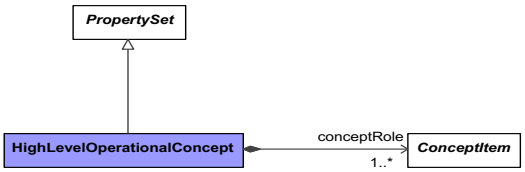

Figure 9:53 - HighLevelOperationalConcept

Domain MetaModel::Operational::Structure

KnownResource

Package: Structure

isAbstract: No

Generalization: OperationalPerformer, ResourcePerformer

Description

Asserts that a known ResourcePerformer constrains the implementation of the OperationalPerformer that plays the role in the OperationalArchitecture.

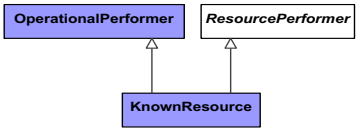

Figure 9:54 - KnownResource

OperationalAgent

Package: Structure

isAbstract: Yes

Generalization: SubjectOfOperationalConstraint, CapableElement, OperationalAsset, Desirer

Description

An abstract type grouping OperationalArchitecture and OperationalPerformer.

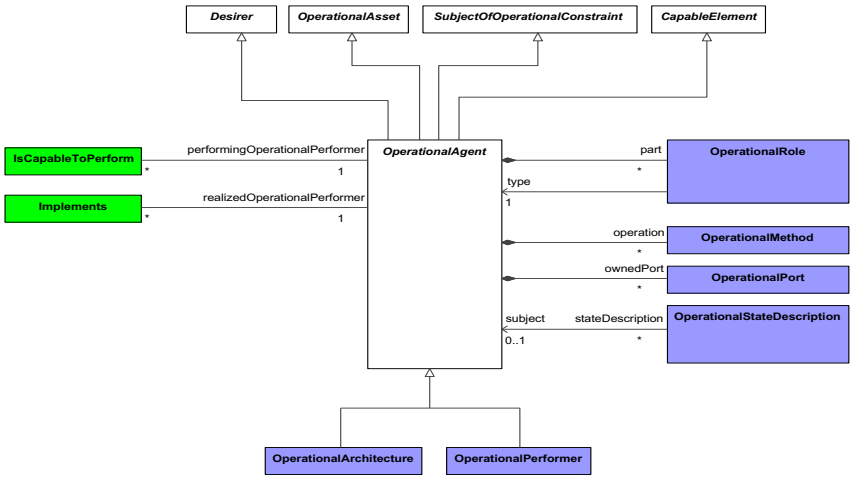

Figure 9:55 - OperationalAgent

OperationalArchitecture

Package: Structure

isAbstract: No

Generalization: OperationalAgent, Architecture

Description

A type used to denote a model of the Architecture, described from the Operational perspective.

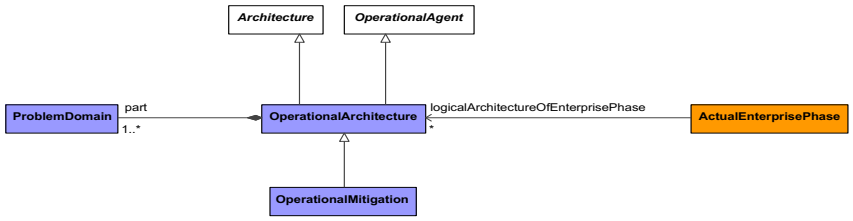

Figure 9:56 - OperationalArchitecture

OperationalMethod

Package: Structure

isAbstract: No

Generalization: ProcessOperation

Description

A behavioral feature of an OperationalAgent whose behavior is specified in an OperationalActivity.

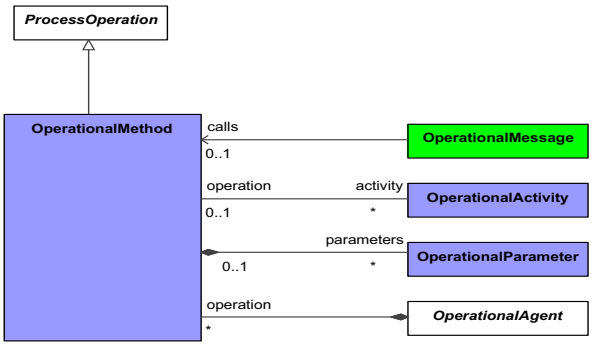

Figure 9:57 - OperationalMethod

OperationalParameter

Package: Structure

isAbstract: No

Generalization: ProcessParameter

Description

A type that represents inputs and outputs of an OperationalActivity. It is typed by an OperationalExchangeItem.

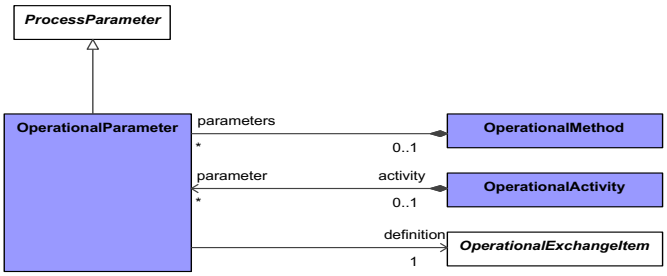

Figure 9:58 - OperationalParameter

OperationalPerformer

Package: Structure

isAbstract: No

Generalization: OperationalAgent

Description

A logical entity that IsCapableToPerform OperationalActivities which produce, consume and process Resources.

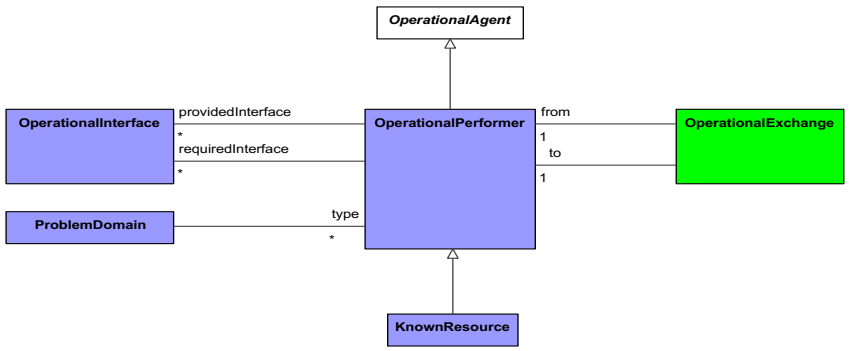

Figure 9:59 - OperationalPerformer

OperationalRole

Package: Structure

isAbstract: No

Generalization: LocationHolder, AssetRole, InteractionRole

Description

Usage of a OperationalPerformer or OperationalArchitecture in the context of another OperationalPerformer or OperationalArchitecture. Creates a whole-part relationship.

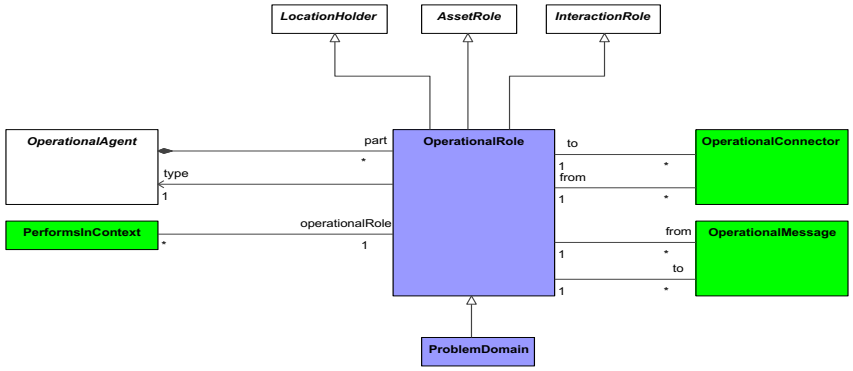

Figure 9:60 - OperationalRole

ProblemDomain

Package: Structure

isAbstract: No

Generalization: OperationalRole

Description

A property associated with an OperationalArchitecture, used to specify the scope of the problem.

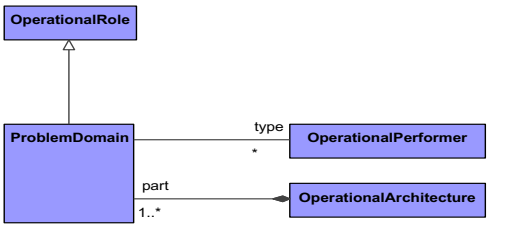

Figure 9:61 - ProblemDomain

Domain MetaModel::Operational::Connectivity

OperationalConnector

Package: Connectivity

isAbstract: No

Generalization: MeasurableElement

Description

A Connector that goes between OperationalRoles representing a need to exchange Resources. It can carry a number of OperationalExchanges.

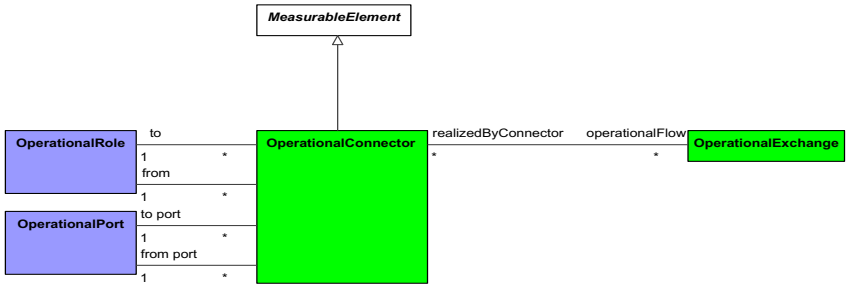

Figure 9:62 - OperationalConnector

OperationalExchange

Package: Connectivity

isAbstract: No

Generalization: Exchange, SubjectOfOperationalConstraint

Description

Asserts that a flow can exist between OperationalPerformers (i.e. flows of information, people, materiel, or energy).

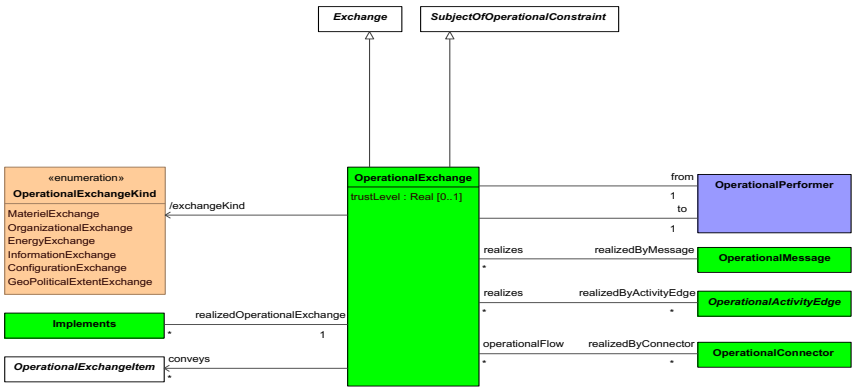

Figure 9:63 - OperationalExchange

Attributes

trustLevel : Real[0..1] Captures the directional arbitrary level of trust related to an OperationalExchange between two OperationalPerformers.

OperationalExchangeItem

Package: Connectivity

isAbstract: Yes

Generalization: Resource, SubjectOfSecurityConstraint, ExchangeItem

Description

An abstract grouping for elements that defines the types of elements that can be exchanged between OperationalPerformers and conveyed by an OperationalExchange.

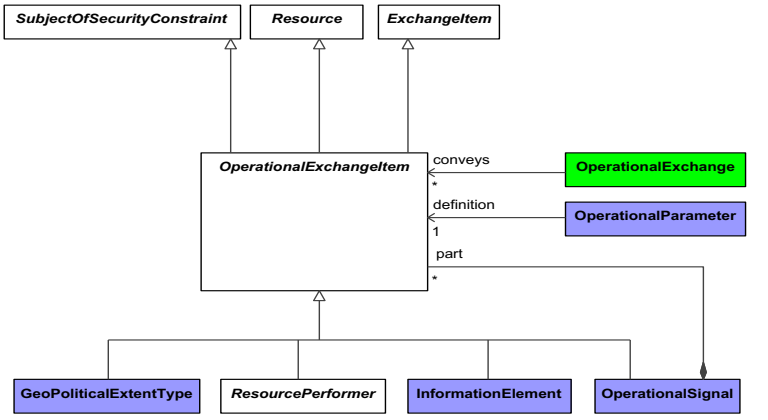

Figure 9:64 - OperationalExchangeItem

OperationalInterface

Package: Connectivity

isAbstract: No

Generalization: PropertySet

Description

A declaration that specifies a contract between the OperationalPerformer it is related to, and any other OperationalPerformers it can interact with.

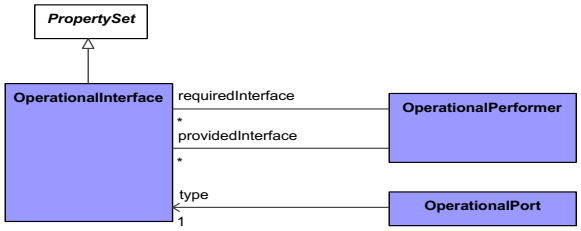

Figure 9:65 - OperationalInterface

OperationalPort

Package: Connectivity

isAbstract: No

Generalization: MeasurableElement

Description

An interaction point for an OperationalAgent through which it can interact with the outside environment and which is defined by an OperationalInterface.

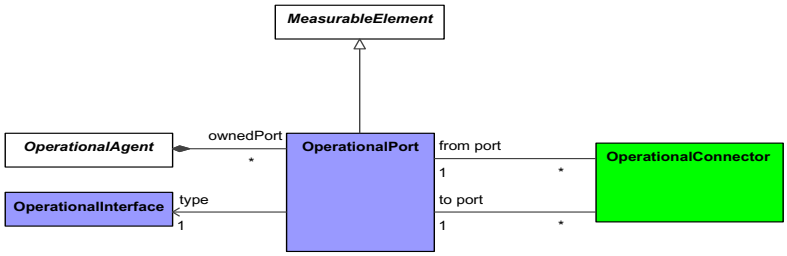

Figure 9:66 - OperationalPort

OperationalSignal

Package: Connectivity

isAbstract: No

Generalization: SubjectOfOperationalConstraint, OperationalExchangeItem

Description

An item of information that flows between OperationalPerformers and is produced and consumed by the OperationalActivities that the OperationalPerformers are capable of performing (see IsCapableToPerform).

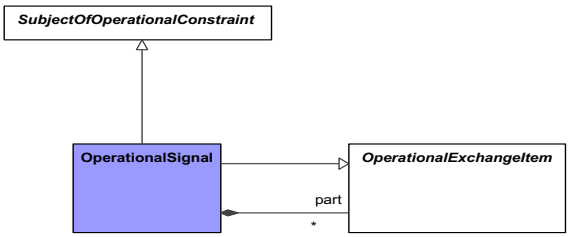

Figure 9:67 - OperationalSignal

Domain MetaModel::Operational::Processes

OperationalActivity

Package: Processes

isAbstract: No

Generalization: SubjectOfOperationalConstraint, Process

Description

An Activity that captures a logical process, specified independently of how the process is carried out.

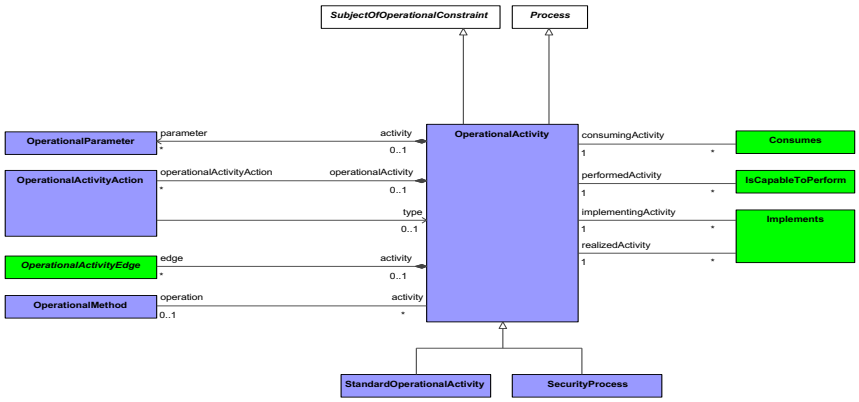

Figure 9:68 - OperationalActivity

OperationalActivityAction

Package: Processes

isAbstract: No

Generalization: ProcessUsage

Description

A call of an OperationalActivity in the context of another OperationalActivity.

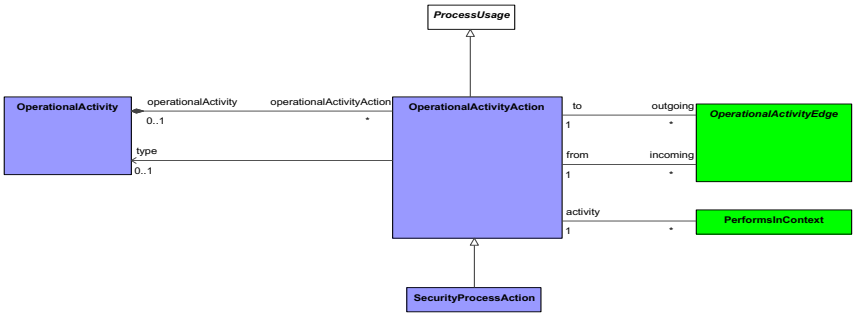

Figure 9:69 - OperationalActivityAction

OperationalActivityEdge

Package: Processes

isAbstract: Yes

Generalization: ProcessEdge

Description

A tuple that shows the flow of Resources (objects/information) between OperationalActivityActions.

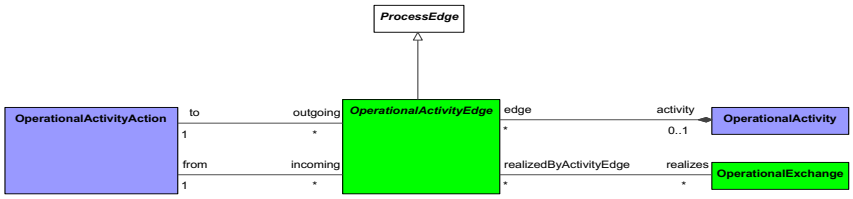

Figure 9:70 - OperationalActivityEdge

StandardOperationalActivity

Package: Processes

isAbstract: No

Generalization: OperationalActivity

Description

A sub-type of OperationalActivity that is a standard operating procedure.

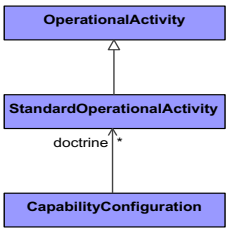

Figure 9:71 - StandardOperationalActivity

Domain MetaModel::Operational::States

OperationalStateDescription

Package: States

isAbstract: No

Generalization: MeasurableElement, StateDescription

Description

A state machine describing the behavior of a OperationalPerformer, depicting how the OperationalPerformer responds to various events and the actions.

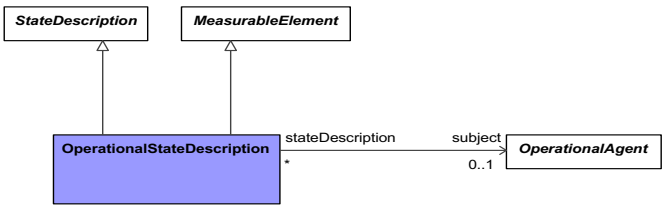

Figure 9:72 - OperationalStateDescription

Domain MetaModel::Operational::Interaction Scenarios

OperationalInteractionScenario

Package: Interaction Scenarios

isAbstract: No

Generalization: InteractionScenario

Description

A specification of the interactions between OperationalPerformers in an OperationalArchitecture.

Figure 9:73 - OperationalInteractionScenario

OperationalMessage

Package: Interaction Scenarios

isAbstract: No

Generalization: InteractionMessage

Description

Message for use in an OperationalInteractionScenario which carries any of the subtypes of OperationalExchange.

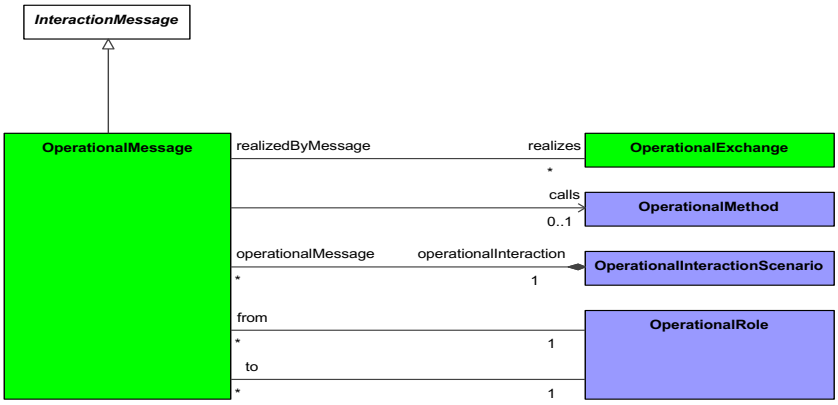

Figure 9:74 - OperationalMessage

Domain MetaModel::Operational::Information

InformationElement

Package: Information

isAbstract: No

Generalization: SubjectOfOperationalConstraint, OperationalAsset, OperationalExchangeItem

Description

An item of information that flows between OperationalPerformers and is produced and consumed by the OperationalActivities that the OperationalPerformers are capable to perform (see IsCapableToPerform).

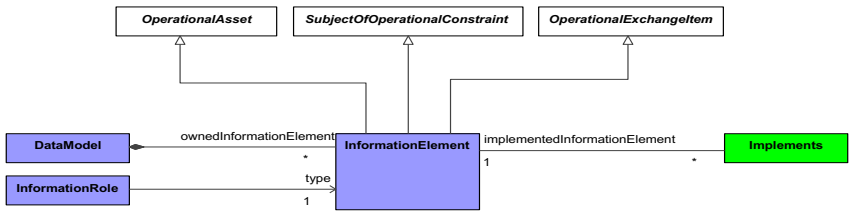

Figure 9:75 - InformationElement

Domain MetaModel::Operational::Constraints

OperationalConstraint

Package: Constraints
isAbstract: No
Generalization: Rule

Description
A Rule governing an operational architecture element i.e. OperationalPerformer, OperationalActivity, InformationElement etc.

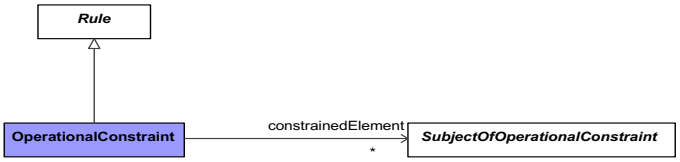

Figure 9:76 - OperationalConstraint

SubjectOfOperationalConstraint

Package: Constraints
isAbstract: Yes
Generalization: UAFElement

Description
An abstract type grouping elements that can be the subject of an OperationalConstraint.

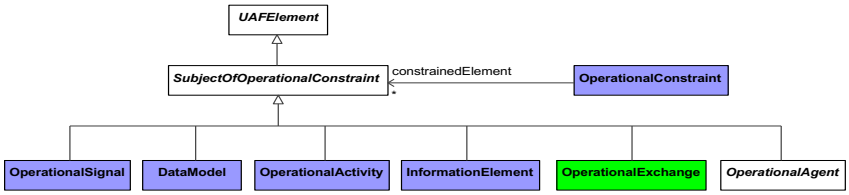

Figure 9:77 - SubjectOfOperationalConstraint

8.1.6 Domain MetaModel::Services

Stakeholders: Enterprise Architects, Solution Providers, Systems Engineers, Software Architects, Business Architects..
Concerns: specifications of services required to exhibit a Capability.
Definition: shows Service Specifications and required and provided service levels of these specifications required to exhibit a Capability or to support an Operational Activity.

Formatted: Heading 3

Domain MetaModel::Services::Taxonomy

ServiceSpecification

Package: Taxonomy
isAbstract: No
Generalization: PropertySet, VersionedElement, CapableElement

Description

The specification of a set of functionality provided by one element for the use of others.

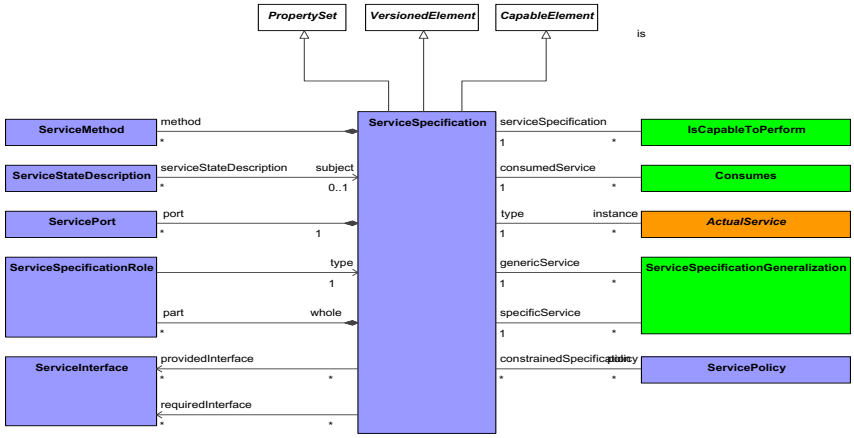

Figure 9:78 - ServiceSpecification

ServiceSpecificationGeneralization

Package: Taxonomy

isAbstract: No

Generalization: PropertySetGeneralization

Description

A ServiceSpecificationGeneralization is a taxonomic relationship between a more general ServiceSpecification and a more specific ServiceSpecification.

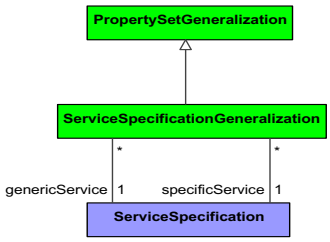

Figure 9:79 - ServiceSpecificationGeneralization

Domain MetaModel::Services::Structure

ServiceConnector

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

A channel for exchange between two ServiceSpecifications. Where one acts as the consumer of the other.

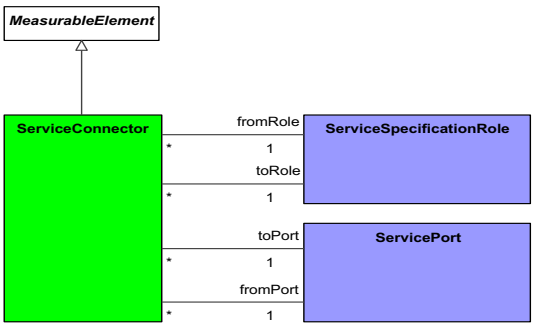

Figure 9:80 - ServiceConnector

ServiceMethod

Package: Structure
isAbstract: No
Generalization: ProcessOperation

Description
A behavioral feature of a ServiceSpecification whose behavior is specified in a ServiceFunction.

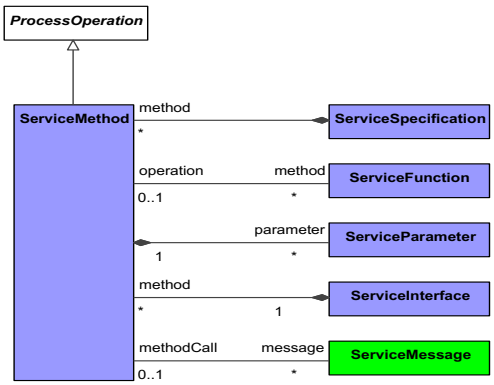

Figure 9:81 - ServiceMethod

ServiceParameter

Package: Structure
isAbstract: No
Generalization: ProcessParameter

Description
A type that represents inputs and outputs of a ServiceFunction, represents inputs and outputs of a ServiceSpecification.

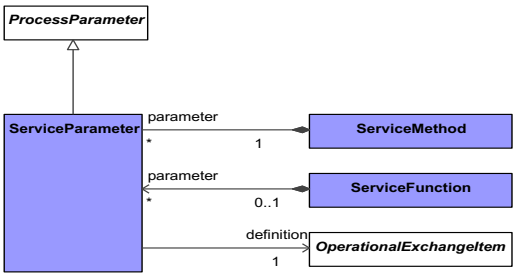

Figure 9:82 - ServiceParameter

ServiceSpecificationRole

Package: Structure

isAbstract: No

Generalization: MeasurableElement, InteractionRole

Description

A behavioral feature of a ServiceSpecification whose behavior is specified in a ServiceFunction.

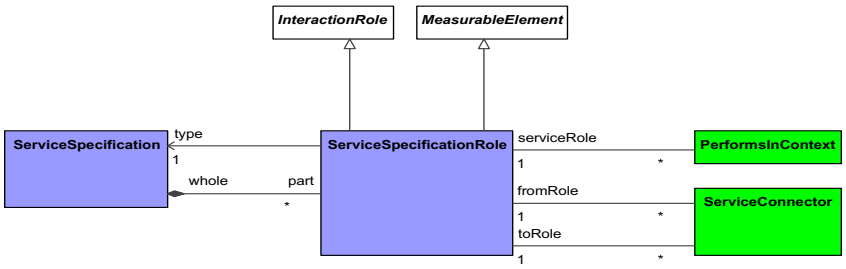

Figure 9:83 - ServiceSpecificationRole

Domain MetaModel::Services::Connectivity

ServiceInterface

Package: Connectivity

isAbstract: No

Generalization: PropertySet

Description

A contract that defines the ServiceMethods and ServiceMessageHandlers that the ServiceSpecification realizes.

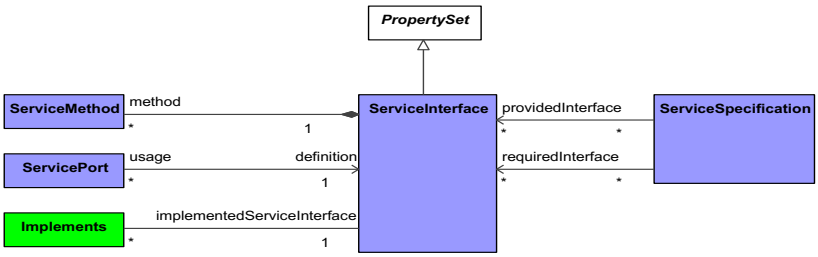

Figure 9:84 - ServiceInterface

ServicePort

Package: Connectivity

isAbstract: No

Generalization: MeasurableElement

Description

An interaction point for a ServiceSpecification through which it can interact with the outside environment and which is defined by a ServiceInterface.

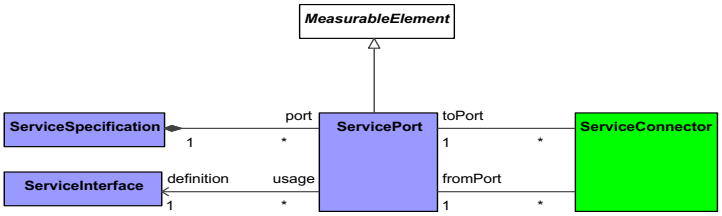

Figure 9:85 - ServicePort

Domain MetaModel::Services::Processes

ServiceFunction

Package: Processes

isAbstract: No

Generalization: Process

Description

An Activity that describes the abstract behavior of ServiceSpecifications, regardless of the actual implementation.

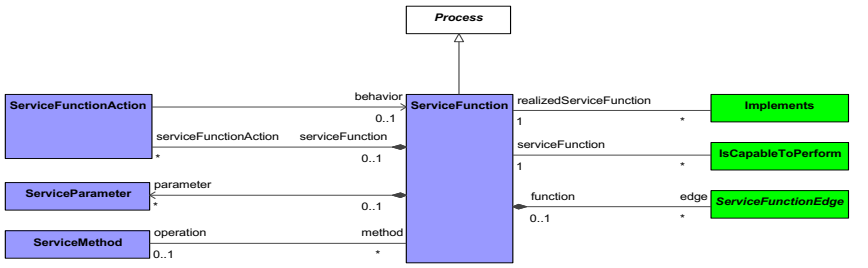

Figure 9:86 - ServiceFunction

ServiceFunctionAction

Package: Processes

isAbstract: No

Generalization: ProcessUsage

Description

A call of a ServiceFunction in the context of another ServiceFunction.

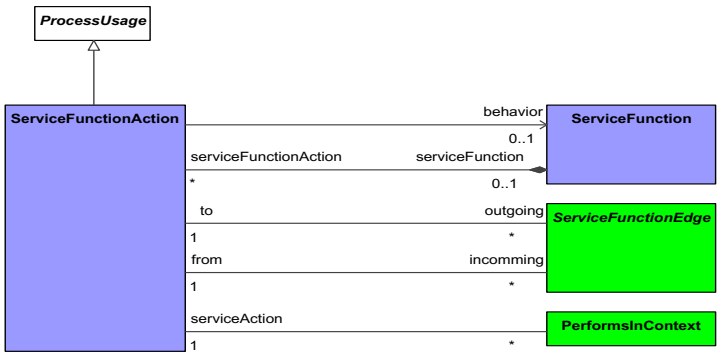

Figure 9:87 - ServiceFunctionAction

ServiceFunctionEdge

Package: Processes

isAbstract: Yes

Generalization: ProcessEdge

Description

A tuple that shows the flow of Resources (objects/information) between OperationalActivityActions.

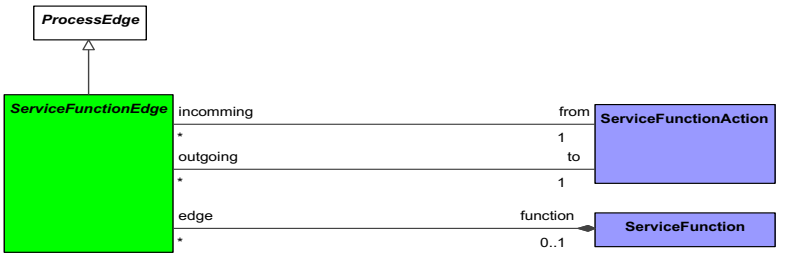

Figure 9:88 - ServiceFunctionEdge

Domain MetaModel::Services::States

ServiceStateDescription

Package: States

isAbstract: No

Generalization: MeasurableElement, StateDescription

Description

A state machine describing the behavior of a ServiceSpecification, depicting how the ServiceSpecification responds to various events and the actions.

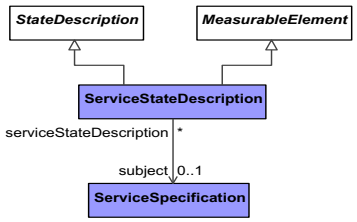

Figure 9:89 - ServiceStateDescription

Domain MetaModel::Services::Interaction Scenarios

ServiceInteractionScenario

Package: Interaction Scenarios

isAbstract: No

Generalization: InteractionScenario

Description

A specification of the interactions between ServiceSpecifications.

Figure 9:90 - ServiceInteractionScenario

ServiceMessage

Package: Interaction Scenarios
isAbstract: No
Generalization: InteractionMessage

Description
Message for use in a Service Event-Trace.

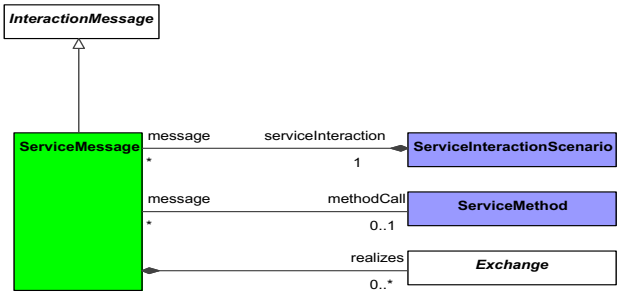

Figure 9:91 - ServiceMessage

Domain MetaModel::Services::Constraints

ServicePolicy

Package: Constraints
isAbstract: No
Generalization: Rule

Description
A constraint governing the use of one or more ServiceSpecifications.

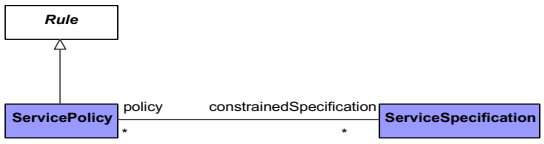

Figure 9:92 - ServicePolicy

Domain MetaModel::Services::Traceability

Consumes

Package: Traceability
isAbstract: No
Generalization: MeasurableElement

Description
A tuple that asserts that an OperationalActivity make use of a service.

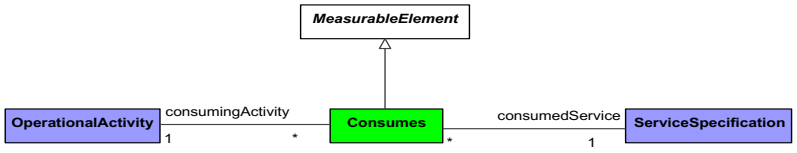

Figure 9:93 - Consumes

8.1.7 Domain MetaModel::Personnel

Formatted: Heading 3

Stakeholders: Human resources, Solution Providers, PMs.
Concerns: human factors.
Definition: aims to clarify the role of Human Factors (HF) when creating architectures in order to facilitate both Human Factors Integration (HFI) and systems engineering (SE).

Domain MetaModel::Personnel::Taxonomy

Organization

Package: Taxonomy
isAbstract: No
Generalization: OrganizationalResource

Description
A group of OrganizationalResources (Persons, Posts, Organizations and Responsibilities) associated for a particular purpose.

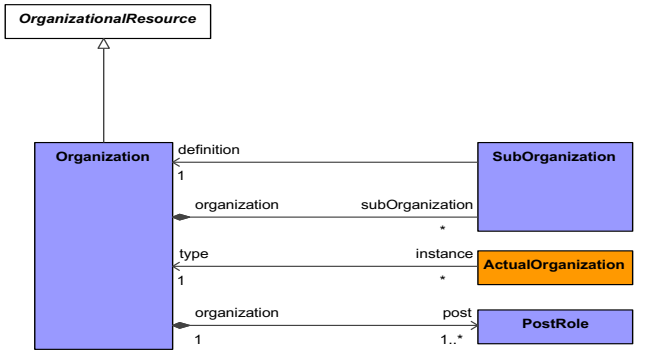

Figure 9:94 - Organization

OrganizationalResource

Package: Taxonomy

isAbstract: Yes

Generalization: PhysicalResource, Stakeholder

Description

An abstract type for Organization, Person, Post and Responsibility.

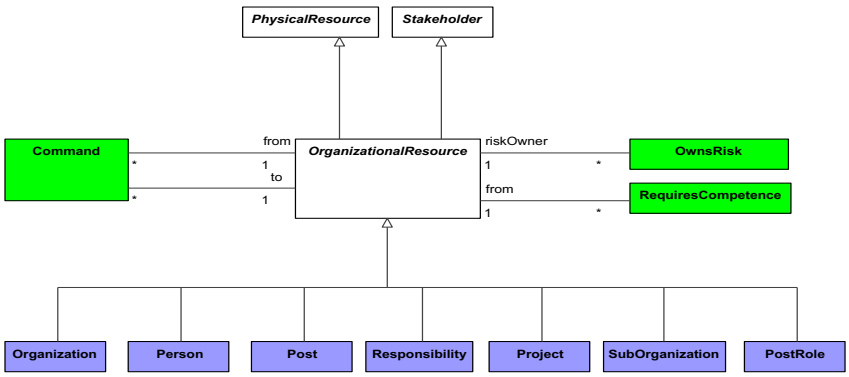

Figure 9:95 - OrganizationalResource

Person

Package: Taxonomy

isAbstract: No

Generalization: OrganizationalResource

Description

A type of a human being used to define the characteristics that need to be described for ActualPersons (e.g. properties such as address, telephone number, nationality, etc).

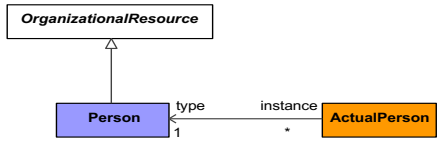

Figure 9:96 - Person

Post

Package: Taxonomy

isAbstract: No

Generalization: OrganizationalResource

Description

A type of job title or position that a person can fill (e.g. Lawyer, Solution Architect, Machine Operator or Chief Executive Officer).

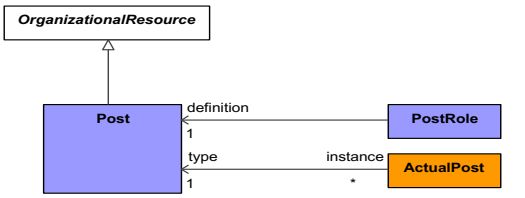

Figure 9:97 - Post

Responsibility

Package: Taxonomy
isAbstract: No
Generalization: OrganizationalResource

Description
The type of duty required of a Person or Organization.

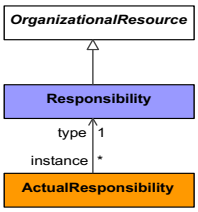

Figure 9:98 - Responsibility

Domain MetaModel::Personnel::Structure

PostRole

Package: Structure
isAbstract: No
Generalization: OrganizationalResource, ResourceRole

Description
A usage of a post in the context of another OrganizationalResource. Creates a whole-part relationship.

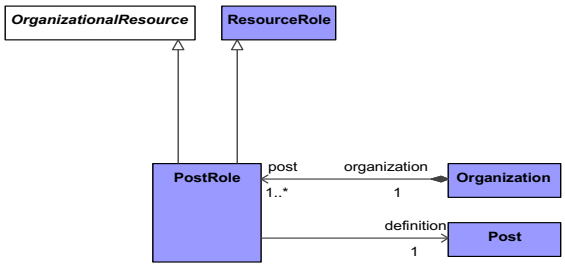

Figure 9:99 - PostRole

SubOrganization

Package: Structure

isAbstract: No

Generalization: OrganizationalResource, ResourceRole

Description

A type of a human being used to define the characteristics that need to be described for ActualPersons (e.g. properties such as address, telephone number, nationality, etc).

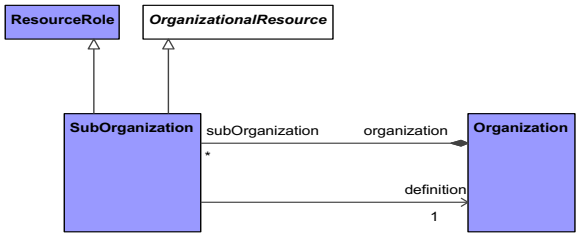

Figure 9:100 - SubOrganization

Domain MetaModel::Personnel::Connectivity

Command

Package: Connectivity

isAbstract: No

Generalization: ResourceExchange

Description

A type of ResourceExchange that asserts that one OrganizationalResource commands another.

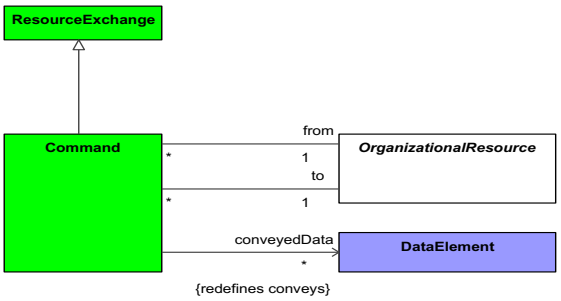

Figure 9:101 - Command

Control

Package: Connectivity

isAbstract: No

Generalization: ResourceExchange

Description

A type of ResourceExchange that asserts that one PhysicalResource controls another PhysicalResource (i.e. the driver of a vehicle controlling the vehicle speed or direction).

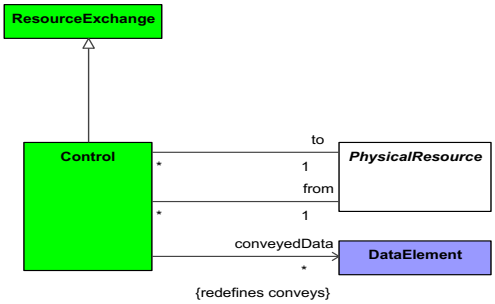

Figure 9:102 - Control

Domain MetaModel::Personnel::Interaction Scenarios

ResourceInteractionScenario

Package: Interaction Scenarios

isAbstract: No

Generalization: InteractionScenario

Description

A specification of the interactions between ResourcePerformers in a ResourceArchitecture.

Figure 9:103 - ResourceInteractionScenario

Domain MetaModel::Personnel::Constraints

Competence

Package: Constraints

isAbstract: No

Generalization: PropertySet, SubjectOfForecast

Description

A specific set of abilities defined by knowledge, skills and aptitude.

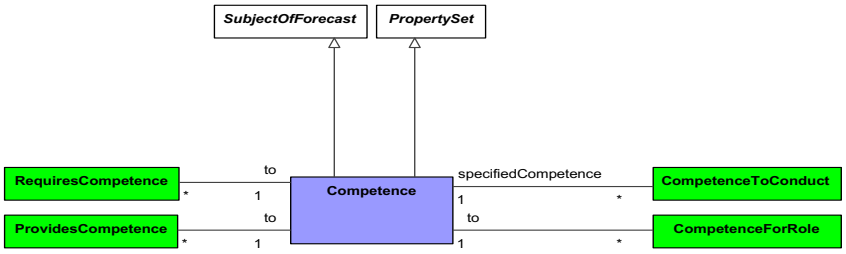

Figure 9:104 - Competence

CompetenceForRole

Package: Constraints

isAbstract: No

Generalization: MeasurableElement

Description

A tuple used to associate an organizational role with a specific set of required competencies.

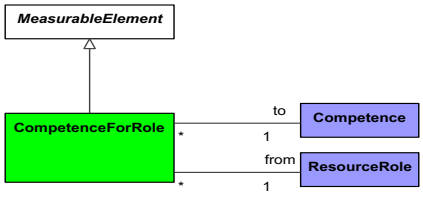

Figure 9:105 - CompetenceForRole

RequiresCompetence

Package: Constraints

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that an ActualOrganizationalResource is required to have a specific set of Competencies.

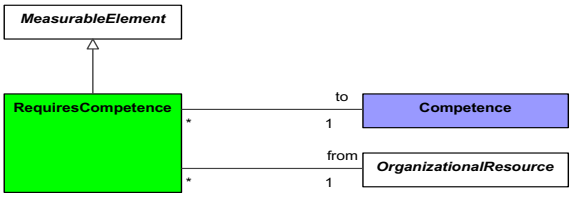

Figure 9:106 - RequiresCompetence

Domain MetaModel::Personnel::Roadmap

FillsPost

Package: Roadmap

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that an ActualPerson fills an ActualPost.

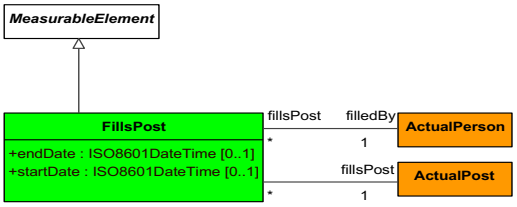

Figure 9:107 - FillsPost

Attributes

endDate : ISO8601DateTime[0..1]	End date of an ActualPerson filling an ActualPost.
startDate : ISO8601DateTime[0..1]	Start date of an ActualPerson filling an ActualPost.

Domain MetaModel::Personnel::Traceability

CompetenceToConduct

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple used to associate a Function with a specific set of Competencies needed to conduct the Function.

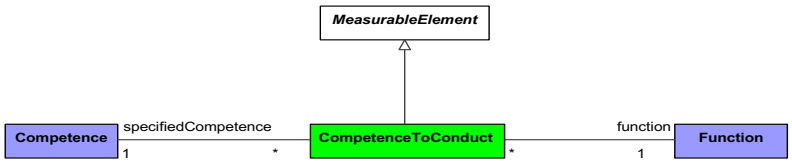

Figure 9:108 - CompetenceToConduct

8.1.8 Domain MetaModel::Resources

Formatted: Heading 3

Domain MetaModel::Resources::Taxonomy

CapabilityConfiguration

Package: Taxonomy

isAbstract: No

Generalization: ResourceArchitecture

Description

A composite structure representing the physical and human resources (and their interactions) in an enterprise, assembled to meet a capability.

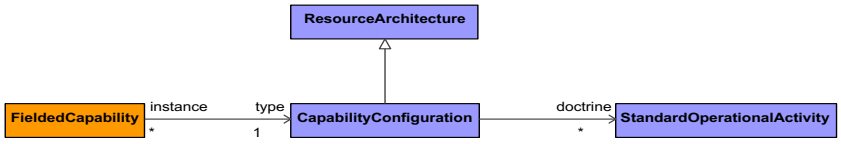

Figure 9:109 - CapabilityConfiguration

NaturalResource

Package: Taxonomy

isAbstract: No

Generalization: PhysicalResource

Description

Type of physical resource that occurs in nature such as oil, water, gas or coal.

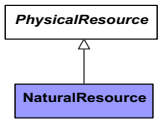

Figure 9:110 - NaturalResource

PhysicalResource

Package: Taxonomy

isAbstract: Yes

Generalization: ResourcePerformer

Description

An abstract type defining physical resources (i.e. OrganizationalResource, ResourceArtifact and NaturalResource).

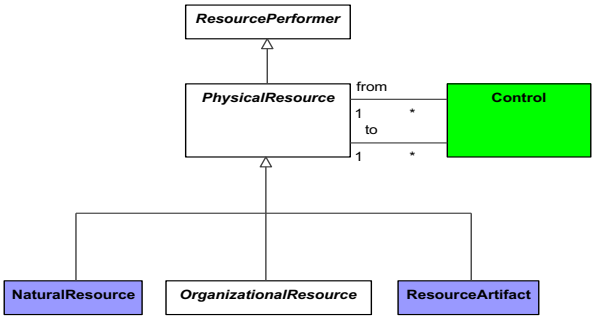

Figure 9:111 - PhysicalResource

ResourceArchitecture

Package: Taxonomy

isAbstract: No

Generalization: ResourcePerformer, Architecture

Description

A type used to denote a model of the Architecture, described from the ResourcePerformer perspective.

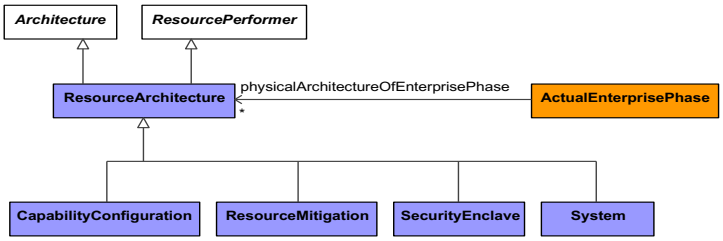

Figure 9:112 - ResourceArchitecture

ResourceArtifact

Package: Taxonomy

isAbstract: No

Generalization: PhysicalResource

Description

A type of man-made object that contains no human beings (i.e. satellite, radio, petrol, gasoline, etc.).

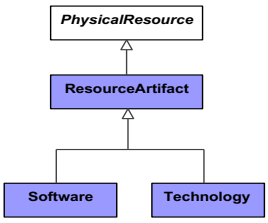

Figure 9:113 - ResourceArtifact

ResourcePerformer

Package: Taxonomy

isAbstract: Yes

Generalization: ResourceExchangeItem, SubjectOfResourceConstraint, OperationalExchangeItem, SubjectOfForecast, CapableElement, Desirer, VersionedElement, ResourceAsset

Description

An abstract grouping of elements that can perform Functions.

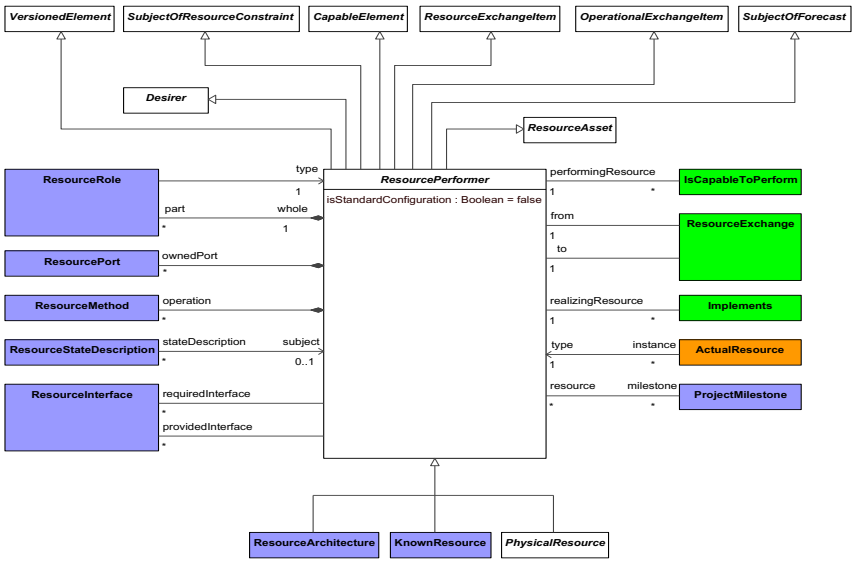

Figure 9:114 - ResourcePerformer

Attributes

isStandardConfiguration : Boolean[] Indicates if the ResourcePerformer is StandardConfiguration, default=false.

Software

Package: Taxonomy

isAbstract: No
Generalization: ResourceArtifact

Description
A sub-type of ResourceArtifact that specifies an executable computer program.

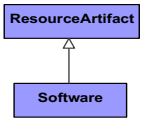

Figure 9:115 - Software

System

Package: Taxonomy
isAbstract: No
Generalization: ResourceArchitecture

Description
An integrated set of elements, subsystems, or assemblies that accomplish a defined objective. These elements include products (hardware, software, firmware), processes, people, information, techniques, facilities, services, and other support elements (INCOSE SE Handbook V4, 2015).

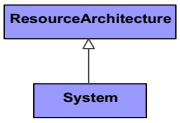

Figure 9:116 - System

Domain MetaModel::Resources::Structure

ResourceMethod

Package: Structure
isAbstract: No
Generalization: ProcessOperation

Description
A behavioral feature of a ResourcePerformer whose behavior is specified in a Function.

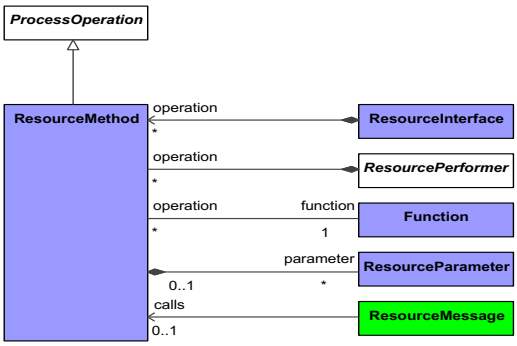

Figure 9:117 - ResourceMethod

ResourceParameter

Package: Structure

isAbstract: No

Generalization: ProcessParameter

Description

A type that represents inputs and outputs of an Function. It is typed by a ResourceInteractionItem.

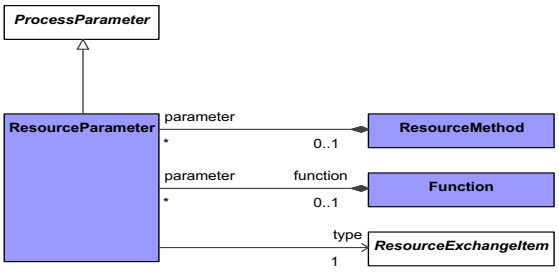

Figure 9:118 - ResourceParameter

ResourcePort

Package: Structure

isAbstract: No

Generalization: ProtocolImplementation, MeasurableElement

Description

An interaction point for a ResourcePerformer through which it can interact with the outside environment and which is defined by a ResourceInterface.

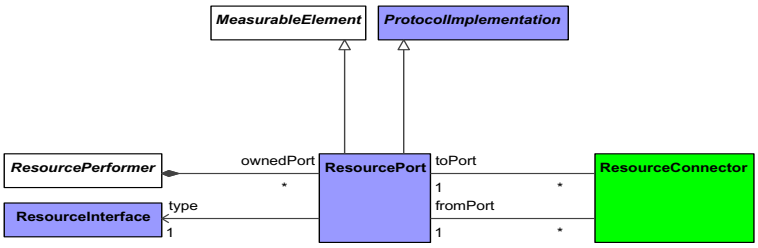

Figure 9:119 - ResourcePort

ResourceRole

Package: Structure

isAbstract: No

Generalization: SubjectOfResourceConstraint, LocationHolder, AssetRole, InteractionRole

Description

Usage of a ResourcePerformer in the context of another ResourcePerformer. Creates a whole-part relationship.

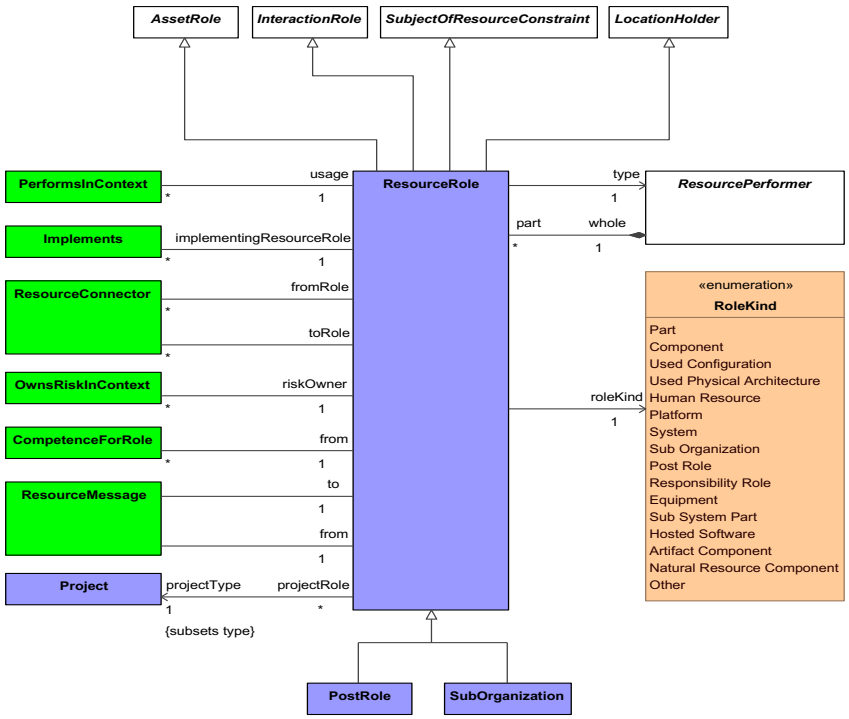

Figure 9:120 - ResourceRole

Domain MetaModel::Resources::Connectivity

ResourceConnector

Package: Connectivity

isAbstract: No

Generalization: ProtocolImplementation, MeasurableElement

Description

A channel for exchange between two ResourceRoles.

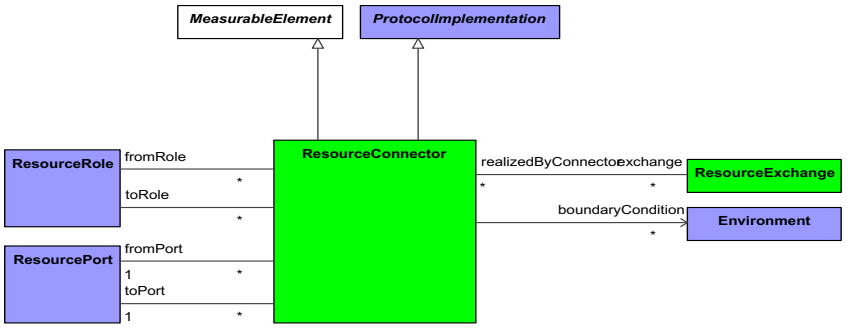

Figure 9:121 - ResourceConnector

ResourceExchange

Package: Connectivity

isAbstract: No

Generalization: Exchange

Description

Asserts that a flow can exist between ResourcePerformers (i.e. flows of data, people, material, or energy).

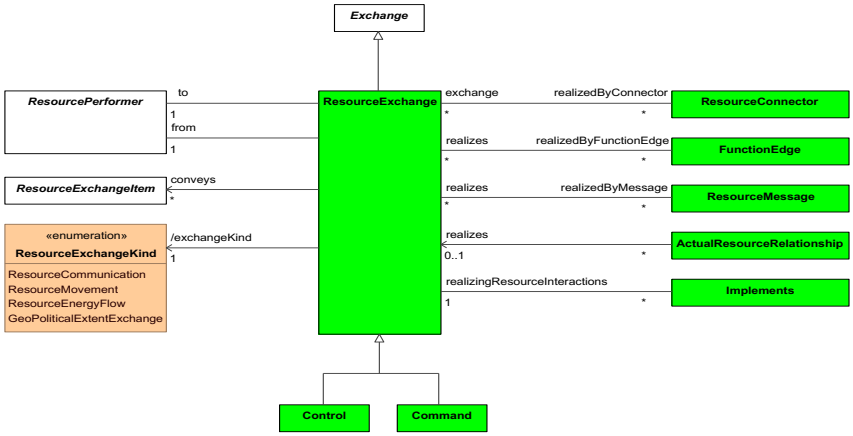

Figure 9:122 - ResourceExchange

ResourceExchangeItem

Package: Connectivity

isAbstract: Yes

Generalization: Resource, SubjectOfSecurityConstraint, ExchangeItem

Description

An abstract type grouping elements that defines the types of elements that can be exchanged between ResourcePerformers and conveyed by a ResourceExchange.

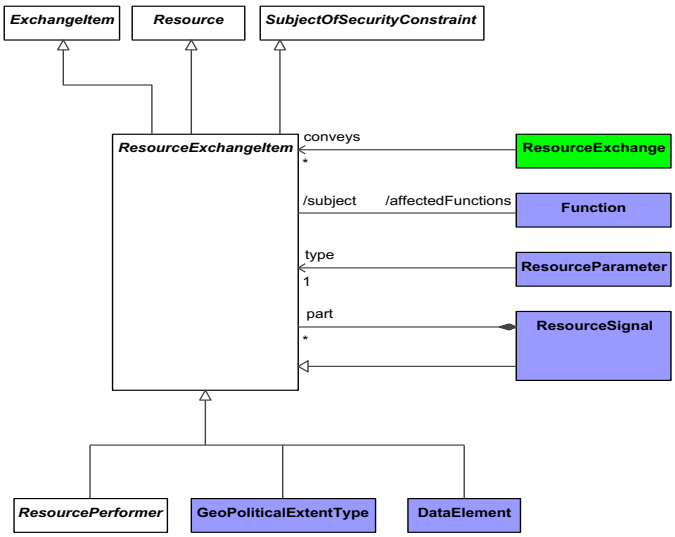

Figure 9:123 - ResourceExchangeItem

ResourceInterface

Package: Connectivity

isAbstract: No

Generalization: PropertySet

Description

A declaration that specifies a contract between the ResourcePerformers it is related to and any other ResourcePerformers it can interact with. It is also intended to be an implementation of a specification of an Interface in the Business and/or Service layer.

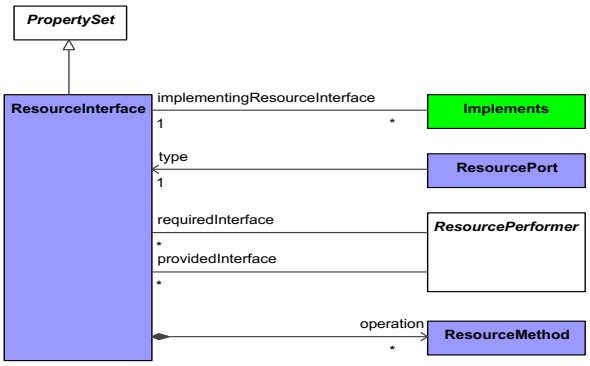

Figure 9:124 - ResourceInterface

ResourceSignal

Package: Connectivity
isAbstract: No
Generalization: ResourceExchangeItem

Description
A property of an element representing something in the physical world, expressed in amounts of a unit of measure.

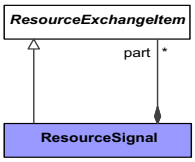

Figure 9:125 - ResourceSignal

Domain MetaModel::Resources::Processes

Function

Package: Processes
isAbstract: No
Generalization: SubjectOfResourceConstraint, Process

Description
An Activity which is specified in the context to the ResourcePerformer (human or machine) that IsCapableToPerform it.

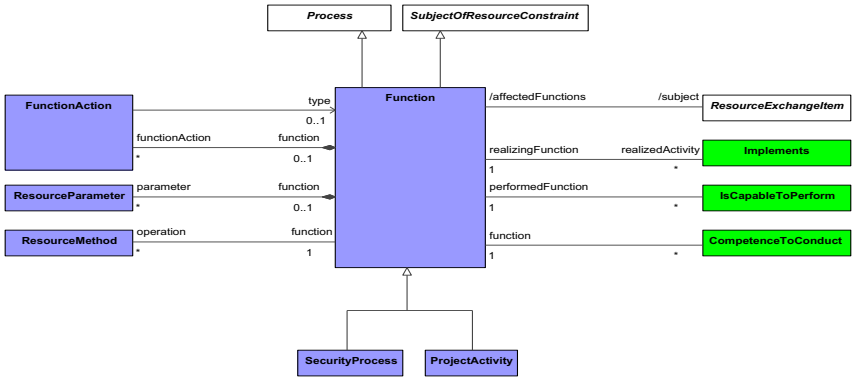

Figure 9:126 - Function

FunctionAction

Package: Processes

isAbstract: No

Generalization: ProcessUsage

Description

A call of a Function indicating that the Function is performed by a ResourceRole in a specific context.

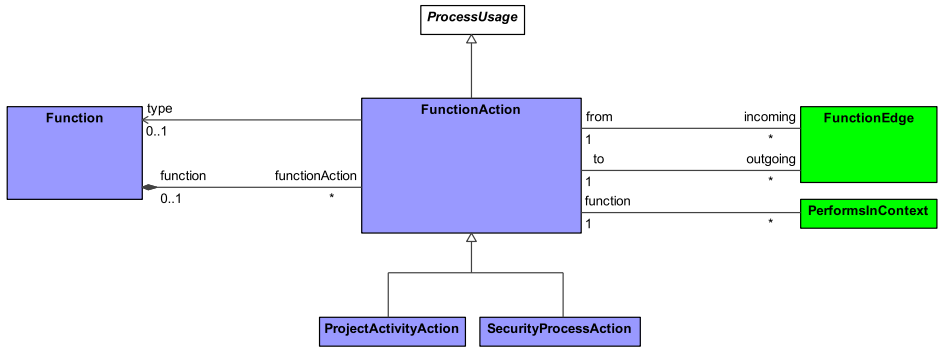

Figure 9:127 - FunctionAction

FunctionEdge

Package: Processes

isAbstract: No

Generalization: ProcessEdge

Description

A tuple that shows the flow of Resources (objects/data) between FunctionActions.

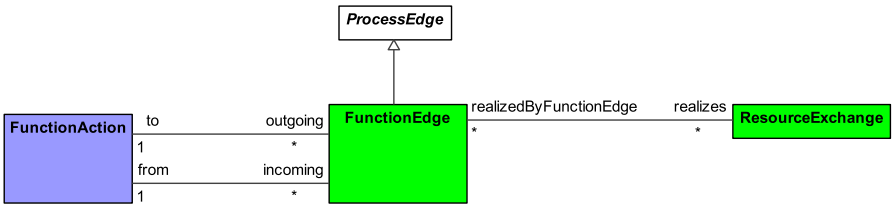

Figure 9:128 - FunctionEdge

Domain MetaModel::Resources::States

ResourceStateDescription

Package: States

isAbstract: No

Generalization: MeasurableElement, StateDescription

Description

A state machine describing the behavior of a ResourcePerformer, depicting how the ResourcePerformer responds to various events and the actions.

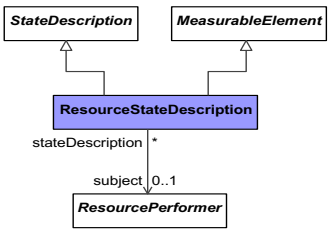

Figure 9:129 - ResourceStateDescription

Domain MetaModel::Resources::Interaction Scenarios

ResourceMessage

Package: Interaction Scenarios

isAbstract: No

Generalization: InteractionMessage

Description

Message for use in an Resource Event-Trace which carries any of the subtypes of ResourceExchange.

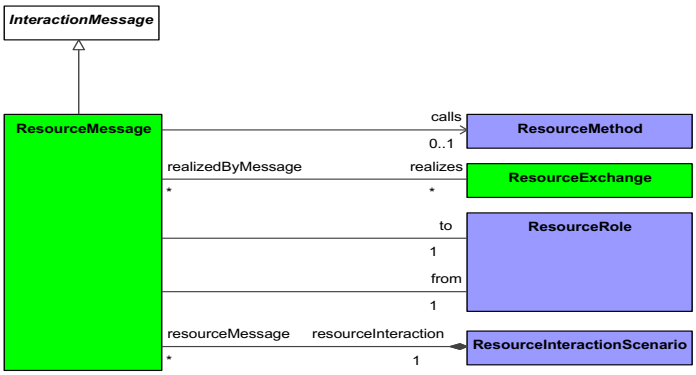

Figure 9:130 - ResourceMessage

Domain MetaModel::Resources::Information

DataElement

Package: Information

isAbstract: No

Generalization: SubjectOfResourceConstraint, ResourceAsset, ResourceExchangeItem

Description

A formalized representation of data that is managed by or exchanged between resources.

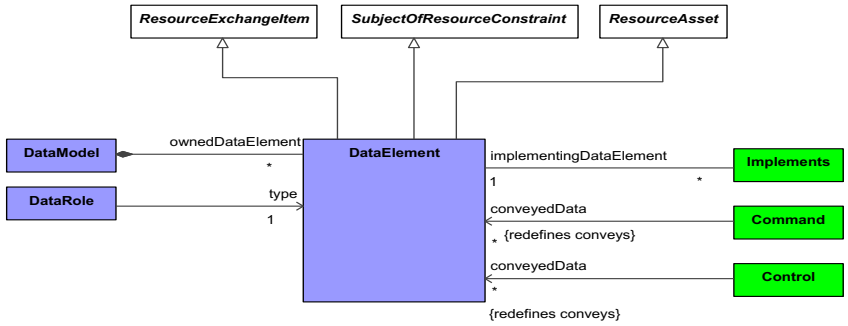

Figure 9:131 - DataElement

DataRole

Package: Information

isAbstract: No

Generalization: AssetRole

Description

A usage of DataElement that exists in the context of an ResourceAsset. It also allows the representation of the whole-part aggregation of DataElements.

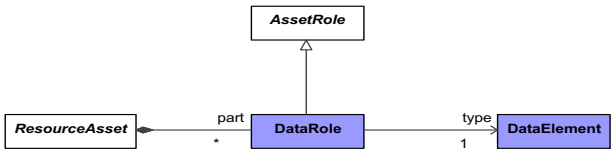

Figure 9:132 - DataRole

Domain MetaModel::Resources::Constraints

ResourceConstraint

Package: Constraints
isAbstract: No
Generalization: Rule

Description
A rule governing the structural or functional aspects of an implementation.

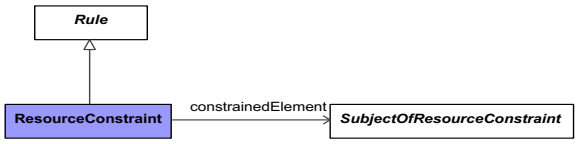

Figure 9:133 - ResourceConstraint

SubjectOfResourceConstraint

Package: Constraints
isAbstract: Yes
Generalization: UAFElement

Description
An abstract type grouping elements that can be the subject of a ResourceConstraint.

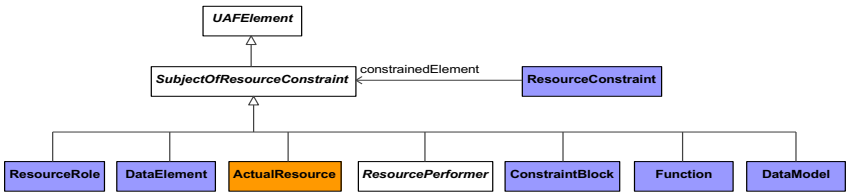

Figure 9:134 - SubjectOfResourceConstraint

Domain MetaModel::Resources::Roadmap

Forecast

Package: Roadmap

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that specifies a transition from one Asset, Standard, Competence to another future one. It is related to an ActualEnterprisePhase to give it a temporal context.

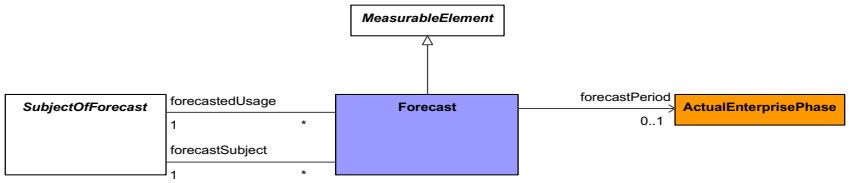

Figure 9:135 - Forecast

SubjectOfForecast

Package: Roadmap

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type grouping elements that can be the subject of a Forecast.

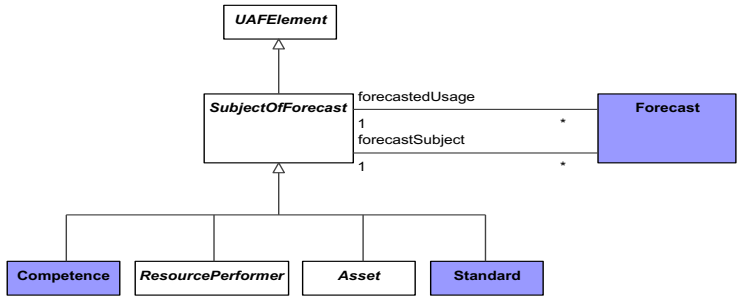

Figure 9:136 - SubjectOfForecast

Technology

Package: Roadmap

isAbstract: No

Generalization: ResourceArtifact

Description

A sub type of ResourceArtifact that indicates a technology domain, i.e. nuclear, mechanical, electronic, mobile telephony etc.

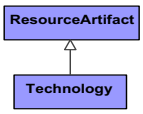

Figure 9:137 - Technology

VersionedElement

Package: Roadmap

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type grouping ResourcePerformer and ServiceSpecification that allows VersionOfConfiguration to be related to ActualProjectMilestones.

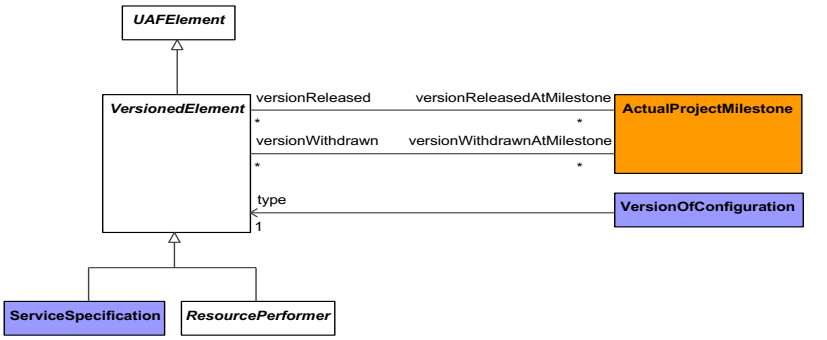

Figure 9:138 - VersionedElement

VersionOfConfiguration

Package: Roadmap

isAbstract: No

Generalization: MeasurableElement

Description

A property of a WholeLifeConfiguration, used in version control of a VersionedElement. It asserts that a VersionedElement is a version of a WholeLifeConfiguration.

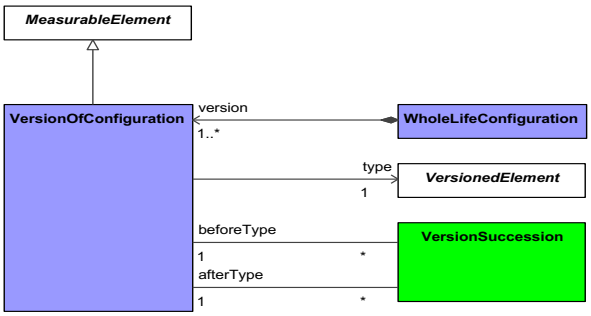

Figure 9:139 - VersionOfConfiguration

VersionSuccession

Package: Roadmap
isAbstract: No
Generalization: MeasurableElement

Description
A tuple between two VersionOfConfigurations that denotes that one VersionOfConfiguration follows from another.

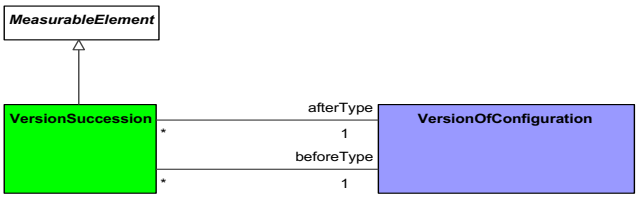

Figure 9:140 - VersionSuccession

WholeLifeConfiguration

Package: Roadmap
isAbstract: No
Generalization: PropertySet

Description
A set of VersionedElements.

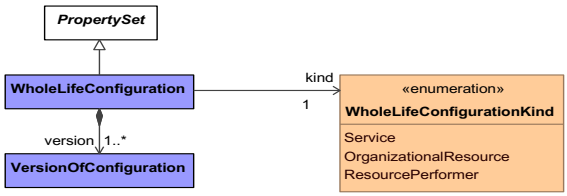

Figure 9:141 - WholeLifeConfiguration

Domain MetaModel::Resources::Traceability

ProtocolImplementation

Package: Traceability
isAbstract: Yes
Generalization: UAFElement

Description
An abstract type grouping architectural elements that can implement Protocols.

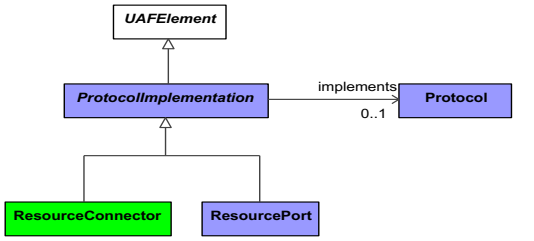

Figure 9:142 - ProtocolImplementation

8.1.9 Domain MetaModel::Security

Formatted: Heading 3

Stakeholders: Security Architects, Security Engineers. Systems Engineers, Operational Architects.
Concerns: addresses the security constraints and information assurance attributes that exist on exchanges between resources and OperationalPerformers
Definition: illustrates the security assets, security constraints, security controls, families, and measures required to address specific security concerns.

Domain MetaModel::Security::Taxonomy

Asset

Package: Taxonomy
isAbstract: Yes
Generalization: SubjectOfForecast, ConceptItem, LocationHolder, PropertySet, SubjectOfSecurityConstraint

Description
Asset as applied to Security views, an abstract type that indicates the types of elements that can be considered as a subject for security analysis.

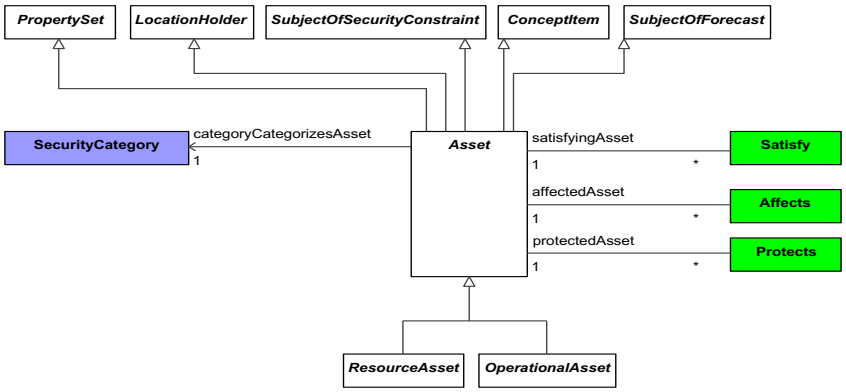

Figure 9:143 - Asset

OperationalAsset

Package: Taxonomy

isAbstract: Yes

Generalization: Asset

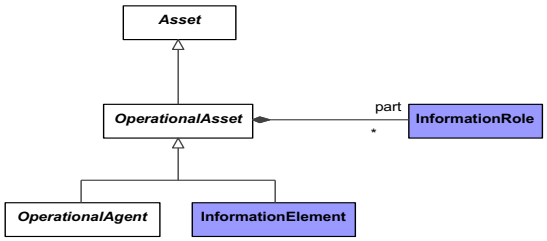

Figure 9:144 - OperationalAsset

OperationalMitigation

Package: Taxonomy

isAbstract: No

Generalization: OperationalArchitecture

Description

A set of OperationalPerformers intended to address against specific operational risks.

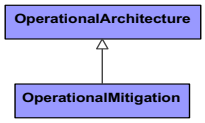

Figure 9:145 - OperationalMitigation

ResourceAsset

Package: Taxonomy

isAbstract: Yes

Generalization: Asset

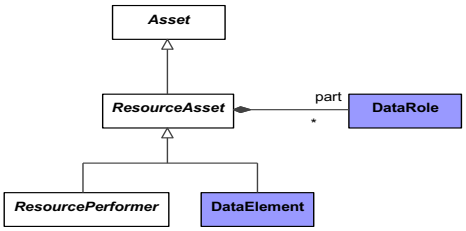

Figure 9:146 - ResourceAsset

ResourceMitigation

Package: Taxonomy

isAbstract: No

Generalization: ResourceArchitecture

Description

A set of ResourcePerformers intended to address against specific risks.

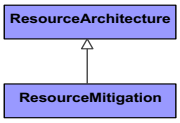

Figure 9:147 - ResourceMitigation

SecurityEnclave

Package: Taxonomy

isAbstract: No

Generalization: ResourceArchitecture

Description

Collection of information systems connected by one or more internal networks under the control of a single authority and security policy. The systems may be structured by physical proximity or by function, independent of location.

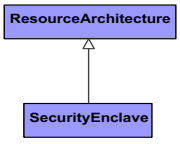

Figure 9:148 - SecurityEnclave

Domain MetaModel::Security::Structure

AssetRole

Package: Structure

isAbstract: Yes

Generalization: BPMN2Metamodel::ResourceRole, SubjectOfSecurityConstraint, MeasurableElement

Description

AssetRole as applied to Security views, an abstract element that indicates the type of elements that can be considered as a subject for security analysis in the particular context.

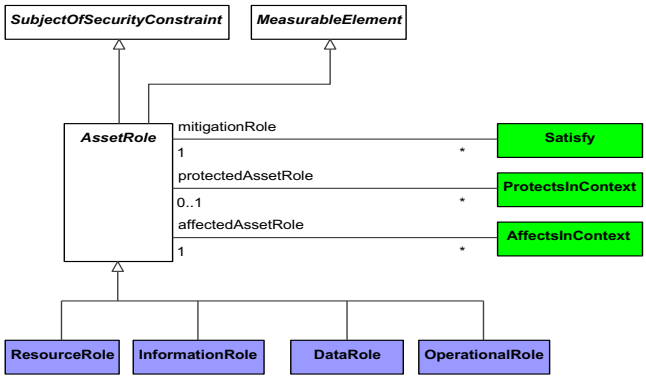

Figure 9:149 - AssetRole

InformationRole

Package: Structure

isAbstract: No

Generalization: AssetRole

Description

A usage of InformationElement that exists in the context of an OperationalAsset. It also allows the representation of the whole-part aggregation of InformationElements.

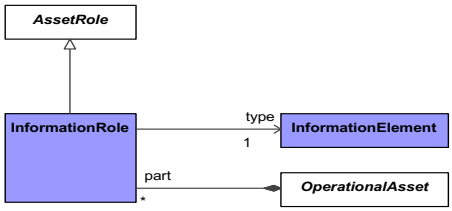

Figure 9:150 - InformationRole

Domain MetaModel::Security::Processes

EnhancedSecurityControl

Package: Processes

isAbstract: No

Generalization: SecurityControl

Description

Statement of security capability to: (i) build in additional but related, functionality to a basic control; and/or (ii)increase the strength of a basic control.

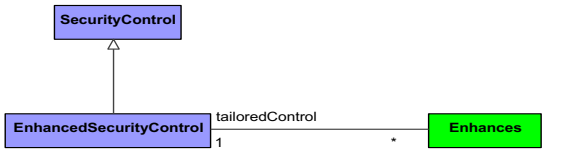

Figure 9:151 - EnhancedSecurityControl

Enhances

Package: Processes

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating the EnhancedSecurityControl to a SecurityControl.

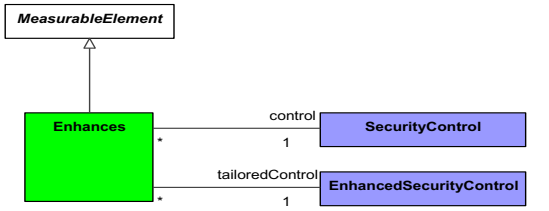

Figure 9:152 - Enhances

Protects

Package: Processes

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that a SecurityControl is required to protect an Asset.

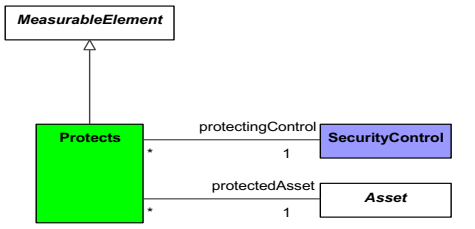

Figure 9:153 - Protects

ProtectsInContext

Package: Processes

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that relates a SecurityControlAction to a OperationalRole, or a ResourceRole. It indicates that SecurityControl is required to protect an Asset in a specific context or configuration.

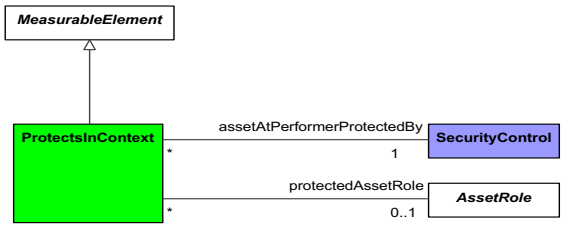

Figure 9:154 - ProtectsInContext

SecurityProcess

Package: Processes

isAbstract: No

Generalization: OperationalActivity, Function, SubjectOfSecurityConstraint

Description

The security-related procedure that satisfies the security control requirement.

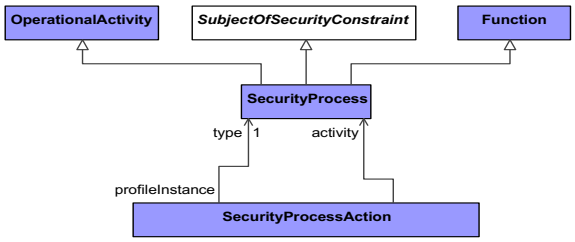

Figure 9:155 - SecurityProcess

SecurityProcessAction

Package: Processes

isAbstract: No

Generalization: OperationalActivityAction, FunctionAction

Description

A call of a SecurityProcess in the context of another SecurityProcess.

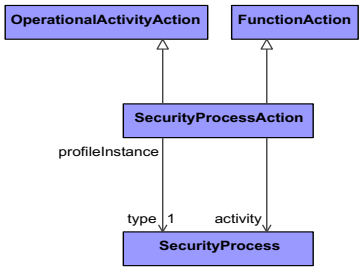

Figure 9:156 - SecurityProcessAction

Domain MetaModel::Security::Constraints

ActualRisk

Package: Constraints

isAbstract: No

Generalization: ActualPropertySet

Description

An instance of a Risk. A value holder for Risk Measurements.

Figure 9:157 - ActualRisk

Caveat

Package: Constraints

isAbstract: No

Generalization: SecurityConstraint

Description

A statement that details alternate conditions under which the rule is not valid.

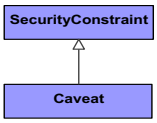

Figure 9:158 - Caveat

Risk

Package: Constraints

isAbstract: No

Generalization: PropertySet

Description

A statement of the impact of an event on Assets. It represents a constraint on an Asset in terms of adverse effects, with an associated measure. The measure is used to capture the extent to which an entity is threatened by a potential circumstance or event. Risk is typically a function of: (i) the adverse impacts that would arise if the circumstance or event occurs; and (ii) the likelihood of occurrence.

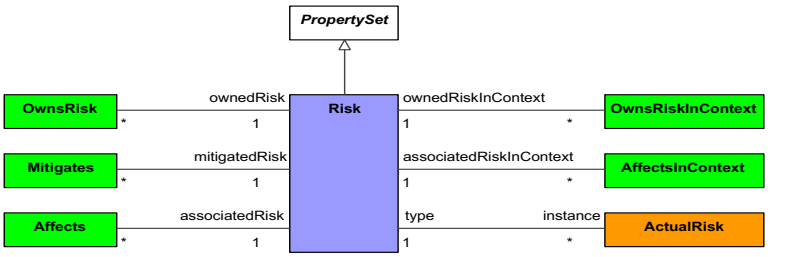

Figure 9:159 - Risk

SecurityAvailability

Package: Constraints

isAbstract: No

Generalization: SecurityMeasurement

Description

Details the potential impact on organization or individuals if the information is not available to those who need to access it.

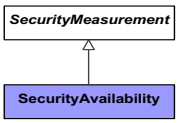

Figure 9:160 - SecurityAvailability

SecurityCategory

Package: Constraints

isAbstract: No

Generalization: MeasurementSet

Description

The security categories that have been determined for each type of information processed, stored, or transmitted by those information systems. The generalized format for expressing the security category (SC) of an information system is: SC information system = {(confidentiality, impact), (integrity, impact), (availability, impact)}.

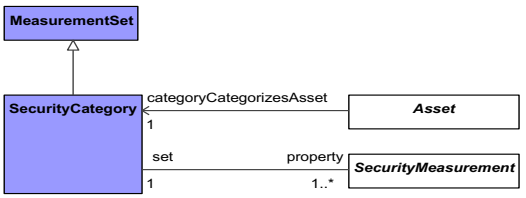

Figure 9:161 - SecurityCategory

SecurityClassification

Package: Constraints

isAbstract: No
Generalization: SecurityMeasurement

Description

Details a classification for the exchange.

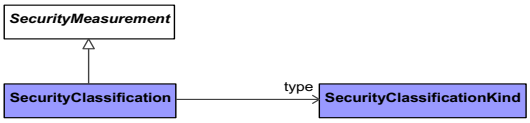

Figure 9:162 - SecurityClassification

SecurityClassificationKind

Package: Constraints
isAbstract: No
Generalization: MeasurableElement

Description
A type that defines acceptable values for the security category (SC) of an information system, where the acceptable values for potential impact are low, moderate, or high.

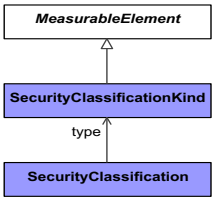

Figure 9:163 - SecurityClassificationKind

SecurityConstraint

Package: Constraints
isAbstract: No
Generalization: Rule

Description
A type of rule that captures a formal statement to define access control policy language.

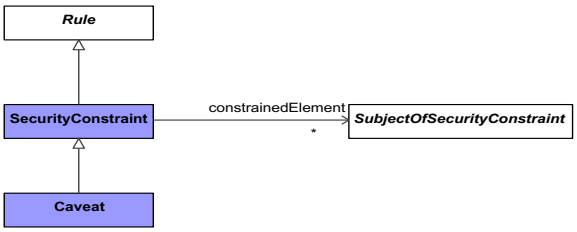

Figure 9:164 - SecurityConstraint

SecurityControl

Package: Constraints

isAbstract: No

Generalization: MeasurableElement

Description

The management, operational, and technical control (i.e., safeguard or countermeasure) prescribed for an information system to protect the confidentiality, integrity, and availability of the system and its information [NIST SP 800-53].

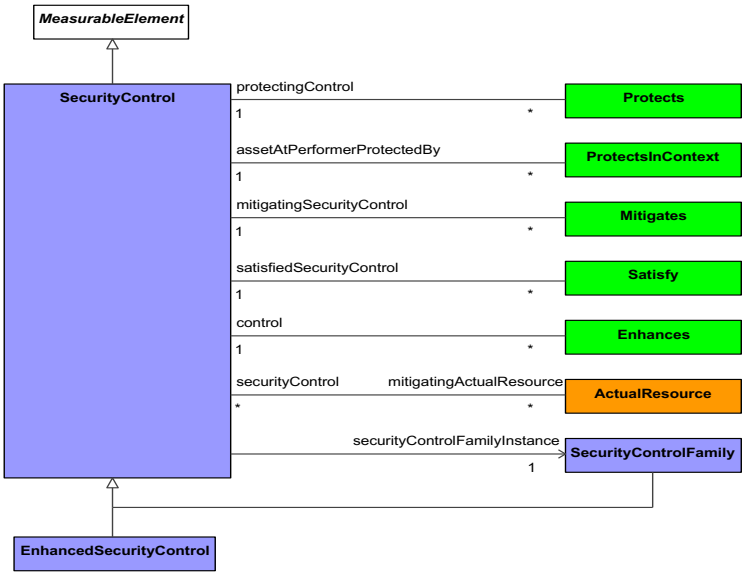

Figure 9:165 - SecurityControl

SecurityControlFamily

Package: Constraints

isAbstract: No

Generalization: SecurityControl

Description

An element that organizes security controls into a family. Each Security Control Family contains security controls related to the general security topic of the family.

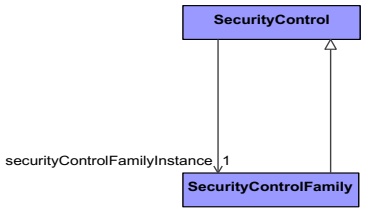

Figure 9:166 - SecurityControlFamily

SecurityIntegrity

Package: Constraints

isAbstract: No

Generalization: SecurityMeasurement

Description

Details the potential impact on organization or individuals due to modification or destruction of information, and includes ensuring information non-repudiation and authenticity.

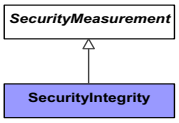

Figure 9:167 - SecurityIntegrity

SecurityMeasurement

Package: Constraints

isAbstract: Yes

Generalization: Measurement

Description

An abstract type grouping all types of security measurements (e.g. SecurityIntegrity, SecurityAvailability).

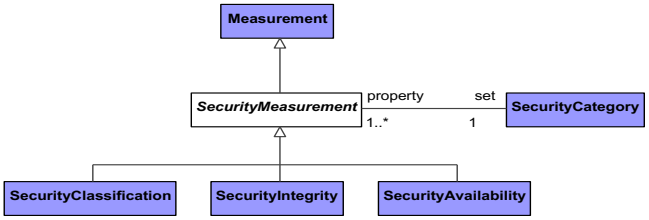

Figure 9:168 - SecurityMeasurement

SubjectOfSecurityConstraint

Package: Constraints

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type grouping elements that can be the subject of a SecurityConstraint.

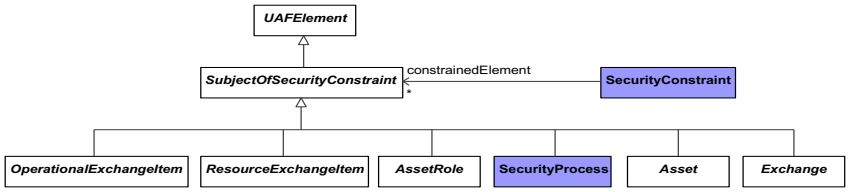

Figure 9:169 - SubjectOfSecurityConstraint

Domain MetaModel::Security::Traceability

Affects

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that a Risk is applicable to an Asset.

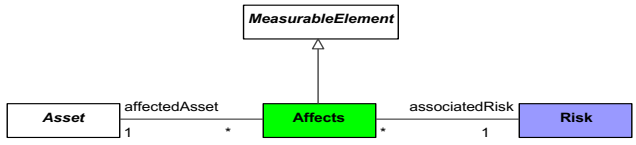

Figure 9:170 - Affects

AffectsInContext

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that a Risk is applicable to an AssetRole in the specific context or configuration.

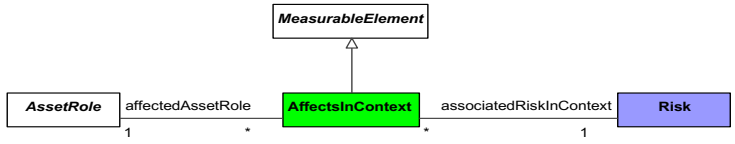

Figure 9:171 - AffectsInContext

Mitigates

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating a Security Control to a Risk. Mitigation is established to manage risk and could be represented as an overall strategy or through techniques (mitigation configurations) and procedures (SecurityProcesses).

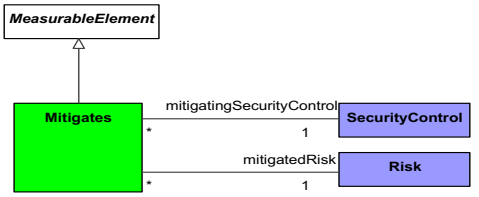

Figure 9:172 - Mitigates

OwnsRisk

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating a Risk to an organizational resource that is responsible for executing the risk mitigation.

Figure 9:173 - OwnsRisk

OwnsRiskInContext

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating a Risk to an organizational role that is responsible for executing the risk mitigation in the specific context or configuration.

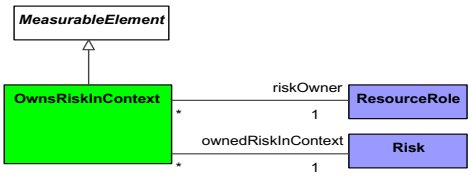

Figure 9:174 - OwnsRiskInContext

8.1.10 Domain MetaModel::Projects

Formatted: Heading 3

Domain MetaModel::Projects::Taxonomy

Project

Package: Taxonomy

isAbstract: No

Generalization: OrganizationalResource

Description

A type that describes types of time-limited endeavors that are required to meet one or more Capability needs.

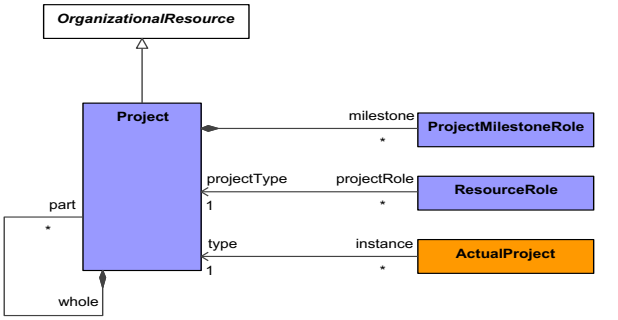

Figure 9:175 - Project

ProjectMilestone

Package: Taxonomy

isAbstract: No

Generalization: PropertySet

Description

A type of event in a Project by which progress is measured.

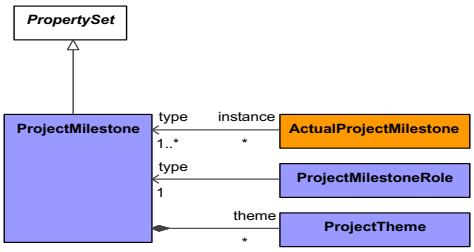

Figure 9:176 - ProjectMilestone

Domain MetaModel::Projects::Structure

ActualProjectMilestoneRole

Package: Structure

isAbstract: No

Generalization: ActualState

Description

An ActualProjectMilestone that is applied to a ProjectMilestoneRole.

Figure 9:177 - ActualProjectMilestoneRole

ProjectMilestoneRole

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

The role played by a ProjectMilestone in the context of a Project.

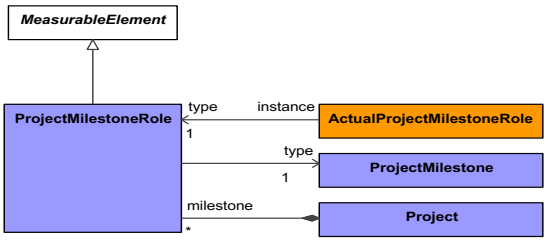

Figure 9:178 - ProjectMilestoneRole

ProjectStatus

Package: Structure

isAbstract: No

Generalization: ActualState

Description

The status (i.e. level of progress) of a ProjectTheme for an ActualProject at the time of the ActualProjectMilestone.

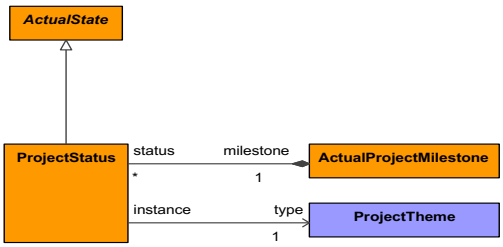

Figure 9:179 - ProjectStatus

ProjectTheme

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

A property of a ProjectMilestone that captures an aspect by which the progress of ActualProjects may be measured.

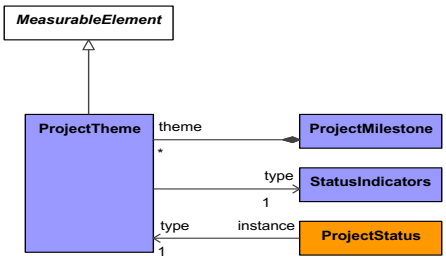

Figure 9:180 - ProjectTheme

StatusIndicators

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

An enumerated type that specifies a status for a ProjectTheme.

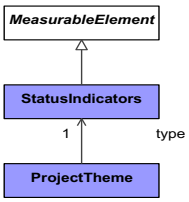

Figure 9:181 - StatusIndicators

Domain MetaModel::Projects::Connectivity

MilestoneDependency

Package: Connectivity
isAbstract: No
Generalization: MeasurableElement

Description
A tuple between two ActualProjectMilestones that denotes one ActualProjectMilestone follows from another.

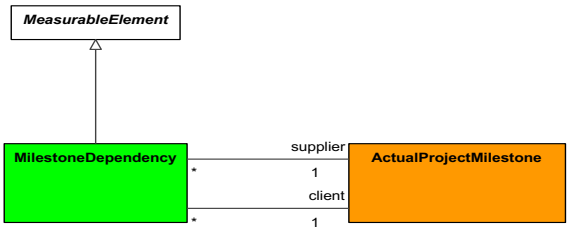

Figure 9:182 - MilestoneDependency

Domain MetaModel::Projects::Processes

ProjectActivity

Package: Processes
isAbstract: No
Generalization: Function, Process

Description
An activity carried out during a project.

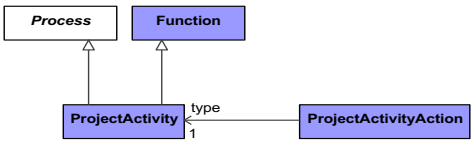

Figure 9:183 - ProjectActivity

ProjectActivityAction

Package: Processes
isAbstract: No
Generalization: FunctionAction

Description
The ProjectActivityAction is defined as a call behavior action that invokes the activity that needs to be preformed.

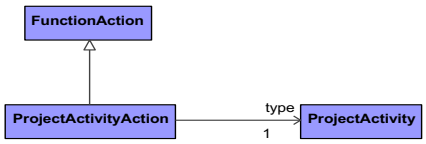

Figure 9:184 - ProjectActivityAction

Domain MetaModel::Projects::Interaction Scenarios

ProjectSequence

Package: Interaction Scenarios
isAbstract: No
Generalization: MeasurableElement

Description
A tuple between two ActualProjects that denotes one ActualProject cannot start before the previous ActualProject is finished.

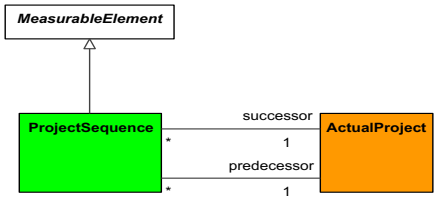

Figure 9:185 - ProjectSequence

Domain MetaModel::Projects::Roadmap

ActualProject

Package: Roadmap
isAbstract: No
Generalization: ActualOrganizationalResource, Achiever

Description
A time-limited endeavor to provide a specific set of ActualResources that meet specific Capability needs.

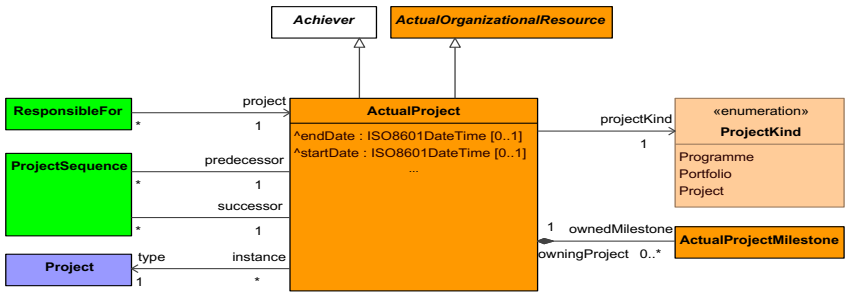

Figure 9:186 - ActualProject

ActualProjectMilestone

Package: Roadmap

isAbstract: No

Generalization: ActualPropertySet

Description

An event with a start date in a ActualProject from which progress is measured.

Figure 9:187 - ActualProjectMilestone

Constraints

[1] unnamed1 startTime=endTime

Domain MetaModel::Projects::Traceability

ResponsibleFor

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple between an ActualResponsibleResource and an ActualResponsibility or ActualProject. It defines the duties that the ActualResponsibleResource is ResponsibleFor.

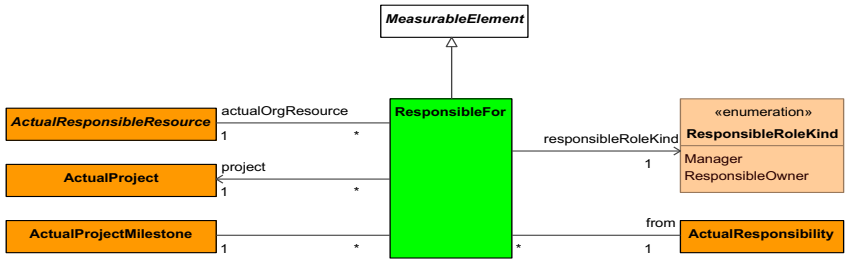

Figure 9:188 - ResponsibleFor

8.1.11 Domain MetaModel::Standards

Stakeholders: Solution Providers, Systems Engineers, Software Engineers, Systems Architects, Business Architects.
Concerns: technical and non-technical Standards applicable to the architecture.
Definition: shows the technical, operational, and business Standards applicable to the architecture. Defines the underlying current and expected Standards.

Formatted: Heading 3

Domain MetaModel::Standards::Taxonomy

Protocol

Package: Taxonomy
isAbstract: No
Generalization: Standard

Description
A Standard for communication over a network. Protocols may be composite, represented as a ProtocolStack made up of ProtocolLayers.

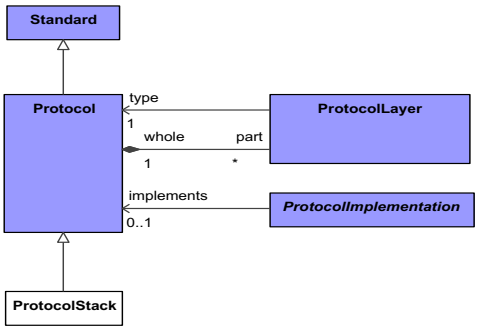

Figure 9:189 - Protocol

ProtocolStack

Package: Taxonomy

isAbstract: No
Generalization: Protocol

Description
A sub type of Protocol that contains the ProtocolLayers, defining a complete stack.

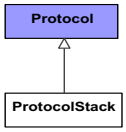

Figure 9:190 - ProtocolStack

Standard

Package: Taxonomy
isAbstract: No
Generalization: SubjectOfForecast, PropertySet

Description
A ratified and peer-reviewed specification that is used to guide or constrain the architecture. A Standard may be applied to any element in the architecture.

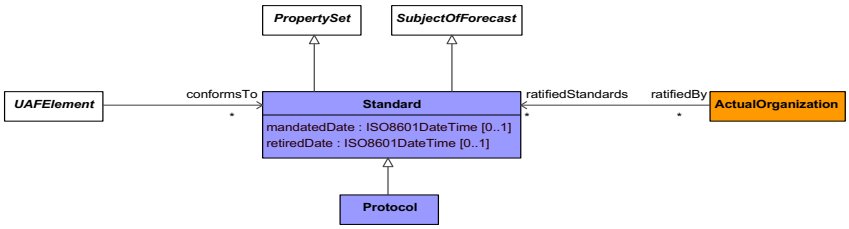

Figure 9:191 - Standard

Attributes

mandatedDate : ISO8601DateTime[0..1]	The date when this version of the Standard was published.
retiredDate : ISO8601DateTime[0..1]	The date when this version of the Standard was retired.

Domain MetaModel::Standards::Structure

ProtocolLayer

Package: Structure
isAbstract: No
Generalization: MeasurableElement

Description
Usage of a Protocol in the context of another Protocol. Creates a whole-part relationship.

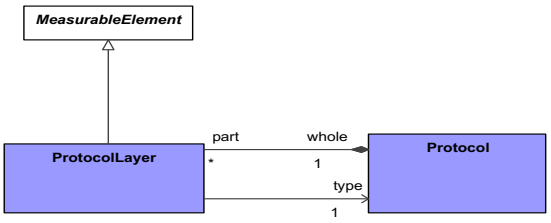

Figure 9:192 - ProtocolLayer

8.1.12 Domain MetaModel::Actual Resources

Formatted: Heading 3

Stakeholders: Solution Providers, Systems Engineers, Business Architects, Human Resources.
Concerns: the analysis.e.g. evaluation of different alternatives, what-if, trade-offs, V&V on the actual resource configurations.
Definition: illustrates the expected or achieved actual resource configurations and actual relationships between them.

Domain MetaModel::Actual Resources::Taxonomy

ActualOrganization

Package: Taxonomy
isAbstract: No
Generalization: ActualResponsibleResource

Description
An actual formal or informal organizational unit, e.g. "Driving and Vehicle Licensing Agency", "UAF team Alpha".

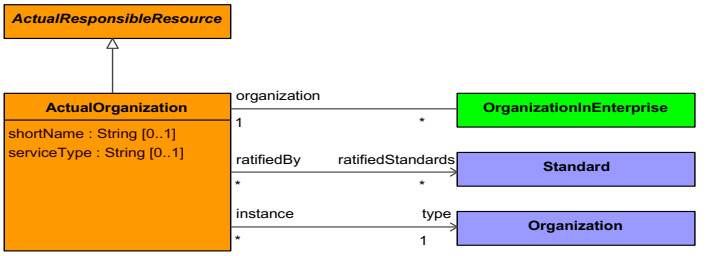

Figure 9:193 - ActualOrganization

Attributes

serviceType : String[0..1]	Service office code or symbol
shortName : String[0..1]	String providing a simplified means of identifying an ActualOrganization, i.e. SoftWareGroup could use SWG as the shortName.

ActualOrganizationalResource

Package: Taxonomy
isAbstract: Yes
Generalization: ActualResource, Stakeholder

Description

Abstract element for an ActualOrganization, ActualPerson or ActualPost.

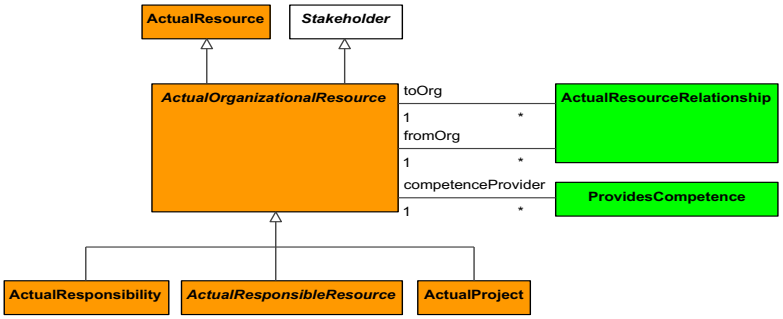

Figure 9:194 - ActualOrganizationalResource

ActualPerson

Package: Taxonomy

isAbstract: No

Generalization: ActualResponsibleResource

Description

An individual human being.

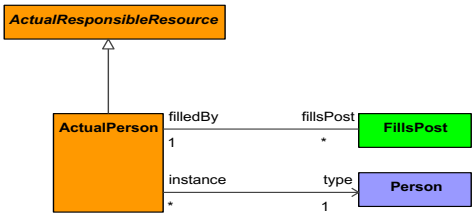

Figure 9:195 - ActualPerson

ActualPost

Package: Taxonomy

isAbstract: No

Generalization: ActualResponsibleResource

Description

An actual, specific post, an instance of a Post "type" - e.g., "President of the United States of America." where the Post would be president.

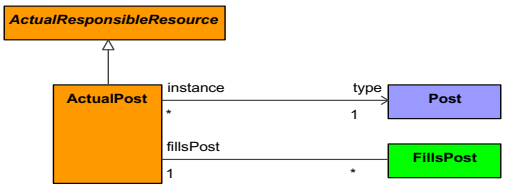

Figure 9:196 - ActualPost

ActualResource

Package: Taxonomy

isAbstract: No

Generalization: ActualPropertySet, SubjectOfResourceConstraint, Achiever, CapableElement

Description

An individual, fully-realized ResourcePerformer.

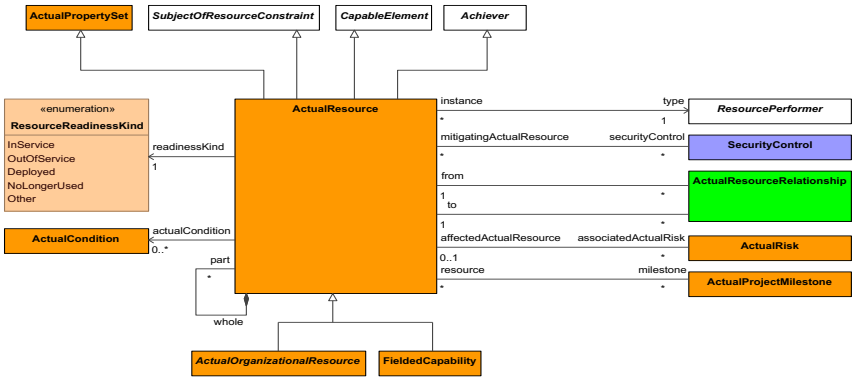

Figure 9:197 - ActualResource

ActualResourceRelationship

Package: Taxonomy

isAbstract: No

Generalization: UAFElement

Description

An actual resource flow existing between ActualResources (i.e. flow of data, people, materiel, or energy).

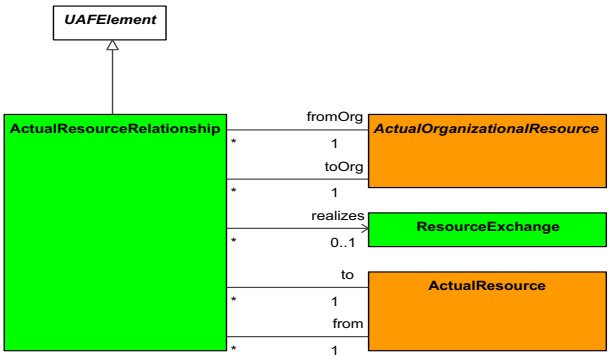

Figure 9:198 - ActualResourceRelationship

ActualResponsibility

Package: Taxonomy

isAbstract: No

Generalization: ActualOrganizationalResource

Description

An actual duty required of a Person or Organization.

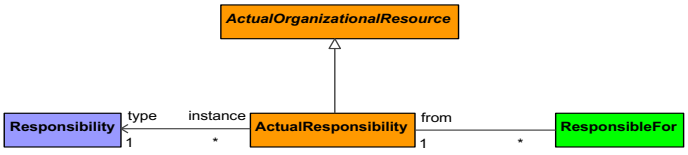

Figure 9:199 - ActualResponsibility

ActualResponsibleResource

Package: Taxonomy

isAbstract: Yes

Generalization: ActualOrganizationalResource

Description

An abstract type grouping responsible OrganizationalResources.

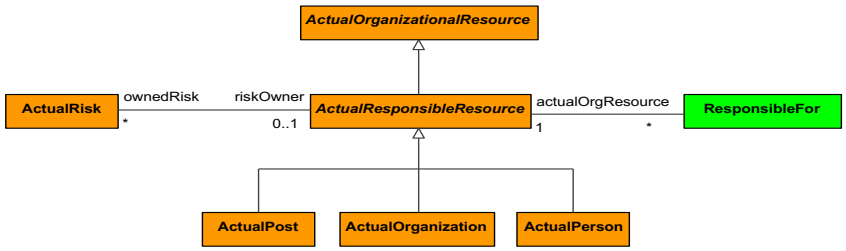

Figure 9:200 - ActualResponsibleResource

FieldedCapability

Package: Taxonomy
isAbstract: No
Generalization: ActualResource

Description
An individual, fully-realized capability.

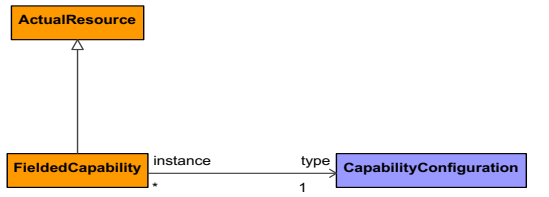

Figure 9:201 - FieldedCapability

Domain MetaModel::Actual Resources::Constraints

ActualService

Package: Constraints
isAbstract: Yes
Generalization: ActualMeasurementSet, CapableElement

Description
An individual ServiceSpecification.

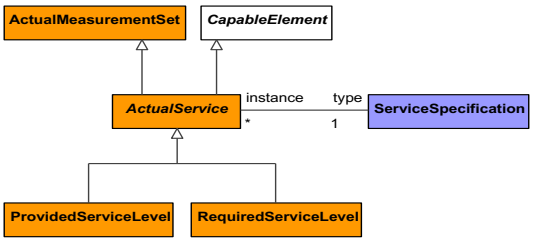

Figure 9:202 - ActualService

ProvidedServiceLevel

Package: Constraints

isAbstract: No

Generalization: ActualService

Description

A sub type of ActualService that details a specific service level delivered by the provider.

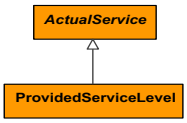

Figure 9:203 - ProvidedServiceLevel

ProvidesCompetence

Package: Constraints

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that an ActualOrganizationalResource provides a specific set of Competencies.

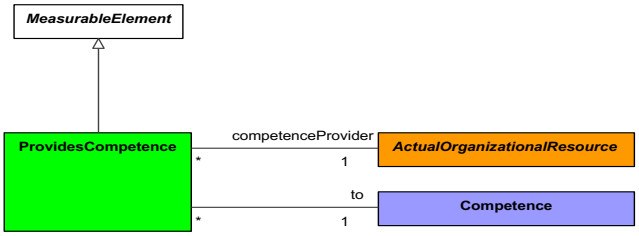

Figure 9:204 - ProvidesCompetence

RequiredServiceLevel

Package: Constraints

isAbstract: No

Generalization: ActualService

Description

A sub type of ActualService that details a specific service level required of the provider.

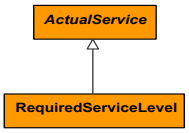

Figure 9:205 - RequiredServiceLevel

8.1.13 Domain MetaModel::Dictionary

Formatted: Heading 3

Stakeholders: Architects, users of the architecture, Capability Owners, Systems Engineers, Solution Providers.

Concerns: Definitions for all the elements in the architecture, libraries of environments and measurements.

Definition: Presents all the elements used in an architecture. Can be used specifically to capture:

a. elements and relationships that are involved in defining the environments applicable to capability, operational concept or set of systems.

b. measurable properties that can be used to support analysis such as KPIs, MoEs, TPIs etc.

Recommended Implementation: Tabular format, SysML Block Definition Diagram.

Alias

Package: Dictionary

isAbstract: No

Generalization: MeasurableElement

Description

A metamodel Artifact used to define an alternative name for an element.

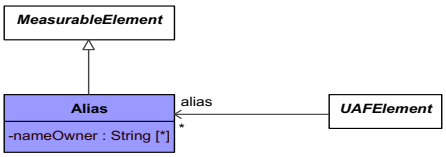

Figure 9:206 - Alias

Attributes

nameOwner : String[*] Someone or something that uses this alternative name.

Definition

Package: Dictionary

isAbstract: No

Generalization: MeasurableElement

Description

A comment containing a description of an element in the architecture.

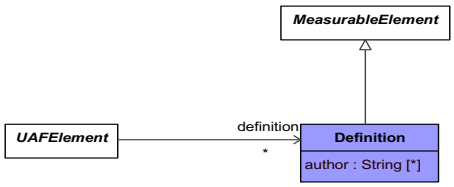

Figure 9:207 - Definition

Attributes

author : String[*] The original or current person (architect) responsible for the Definition.

SameAs

Package: Dictionary

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that two elements refer to the same real-world thing.

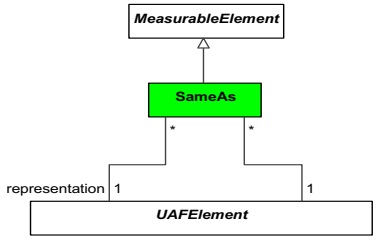

Figure 9:208 - SameAs

8.1.14 Domain MetaModel::Summary & Overview

Formatted: Heading 3

ArchitecturalDescription

Package: Summary & Overview

isAbstract: No

Generalization: MeasurableElement

Description

An Architecture Description is a work product used to express the Architecture of some System Of Interest.
It provides executive-level summary information about the architecture description in a consistent form to allow quick reference and comparison between architecture descriptions -- It includes assumptions, constraints, and limitations that may affect high-level decisions relating to an architecture-based work program.

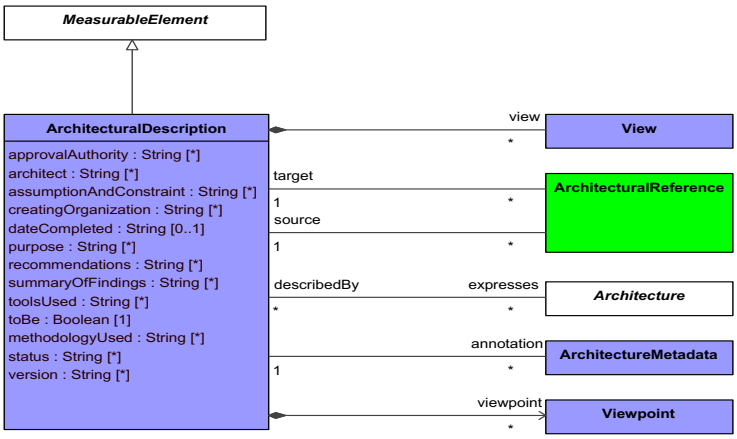

Figure 9:209 - ArchitecturalDescription

Attributes

approvalAuthority : String[*]	Someone or something that has the authority to approve the ArchitecturalDescription.
architect : String[*]	Someone responsible for the creation of ArchitecturalDescription.
assumptionAndConstraint : String[*]	Any assumptions, constraints, and limitations contained in the ArchitecturalDescription, including those affecting deployment, communications performance, information assurance environments, etc.
creatingOrganization : String[*]	The organization responsible for creating the ArchitecturalDescription.
dateCompleted : String[0..1]	Date that the ArchitecturalDescription was completed.
methodologyUsed : String[*]	The methodology used in developing the architecture.
purpose : String[*]	Explains the need for the Architecture, what it will demonstrate, the types of analyses that will be applied to it, who is expected to perform the analyses, what decisions are expected to be made on the basis of each form of analysis, who is expected to make those decisions, and what actions are expected to result.
recommendations : String[*]	States the recommendations that have been developed based on the architecture effort. Examples include recommended system implementations, and opportunities for technology insertion.
status : String[*]	Approval status of the architecture.
summaryOfFindings : String[*]	Summarizes the findings that have been developed so far. This may be updated several times during the development of the ArchitecturalDescription.
toBe : Boolean[1]	Indicates whether the ArchitecturalDescription represents an Architecture that exists or will exist in the future.
toolsUsed : String[*]	Identifies any tools used to develop the ArchitecturalDescription as well as file names and formats if appropriate.
version : String[*]	Version number of the architecture.

Architecture

Package: Summary & Overview

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type that represents a generic architecture. Subtypes are OperationalArchitecture and PhysicalArchitecture.

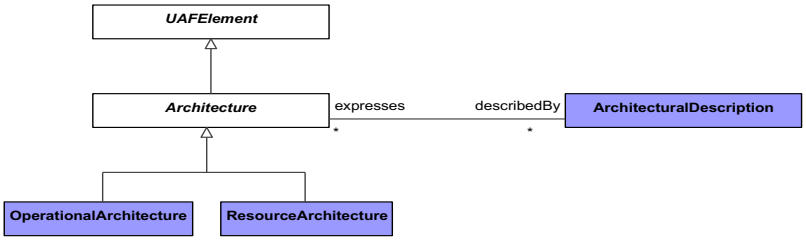

Figure 9:210 - Architecture

Concern

Package: Summary & Overview

isAbstract: No

Generalization: PropertySet

Description

Interest in an EnterprisePhase (EnterprisePhase is synonym for System in ISO 42010) relevant to one or more of its stakeholders.

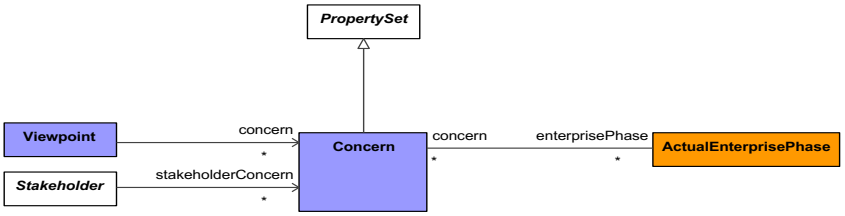

Figure 9:211 - Concern

Stakeholder

Package: Summary & Overview

isAbstract: Yes

Generalization: UAFElement

Description

Individual, team, organization, or classes thereof, having an interest in an EnterprisePhase [ISO/IEC/IEEE 42010:2011].

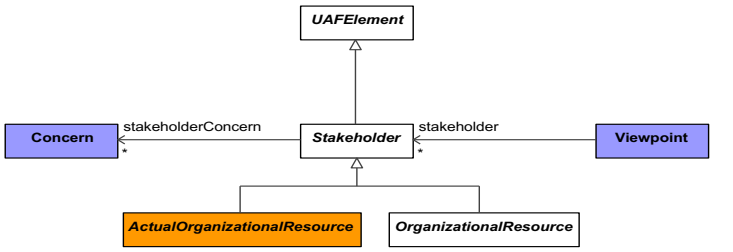

Figure 9:212 - Stakeholder

UAFElement

Package: Summary & Overview

isAbstract: Yes

Description

Abstract super type for all of the UAF elements. It provides a way for all of the UAF elements to have a common set of properties.

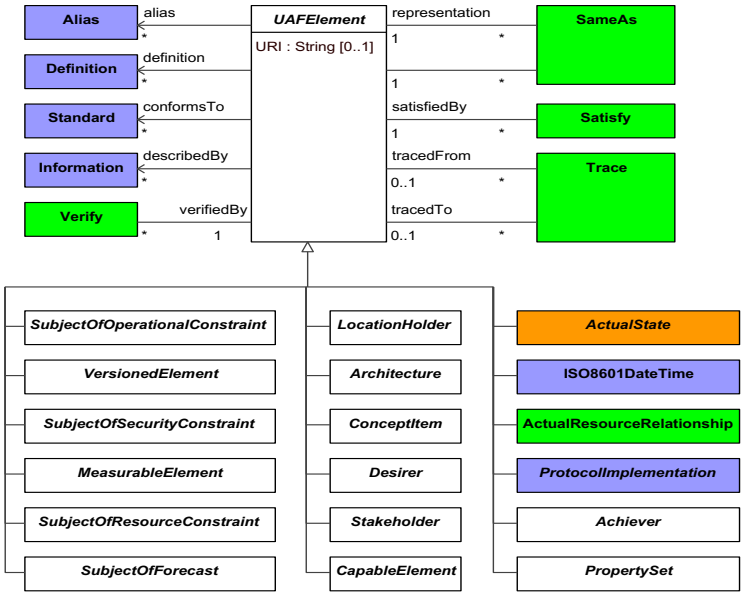

Figure 9:213 - UAFElement

Attributes

URI : String[0..1] Captures Unique identifier for the element.

View

Package: Summary & Overview

isAbstract: No

Generalization: PropertySet

Description

An architecture view expresses the architecture of the system-of-interest in accordance with an architecture viewpoint (or simply, viewpoint). [ISO/IEC/IEEE 42010:2011(E)].

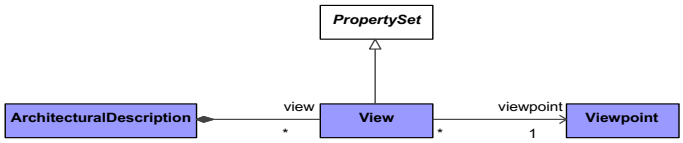

Figure 9:214 - View

Viewpoint

Package: Summary & Overview

isAbstract: No

Generalization: PropertySet

Description

An architecture viewpoint frames (to formulate or construct in a particular style or language) one or more concerns. A concern can be framed by more than one viewpoint. [ISO/IEC/IEEE 42010:2011(E)].

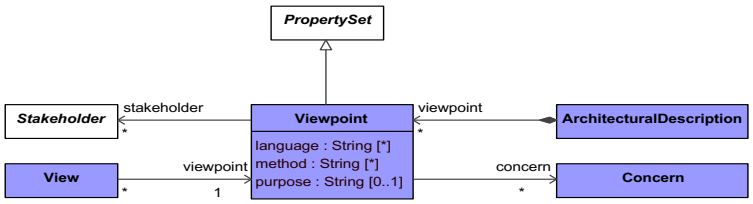

Figure 9:215 - Viewpoint

Attributes

language : String[*]	The languages used to express the Viewpoint.
method : String[*]	The methods employed in the development of the Viewpoint.
purpose : String[0..1]	The purpose of the Viewpoint.

8.1.15 Domain MetaModel::Information

Formatted: Heading 3

DataModel

Package: Information

isAbstract: No

Generalization: SubjectOfOperationalConstraint, SubjectOfResourceConstraint

Description

A structural specification of data types, showing relationships between them. The type of data captured in the DataModel is described using the enumeration DataModelKind (Conceptual,Logical and Physical).

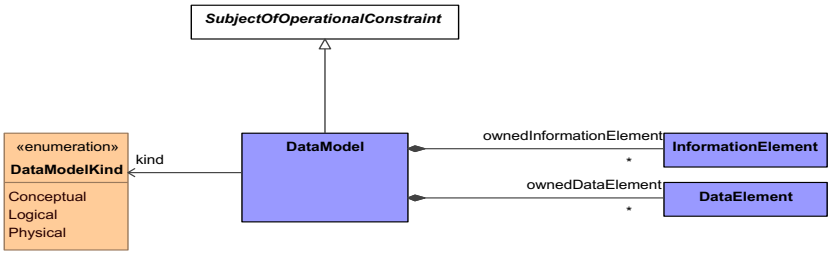

Figure 9:216 - DataModel

8.1.16 Domain MetaModel::Parameters

Formatted: Heading 3

ActualCondition

Package: Parameters

isAbstract: No

Generalization: ActualPropertySet

Description

An individual describing an actual situation with respect to circumstances under which an OperationalActivity, Function or ServiceFunction can be performed.

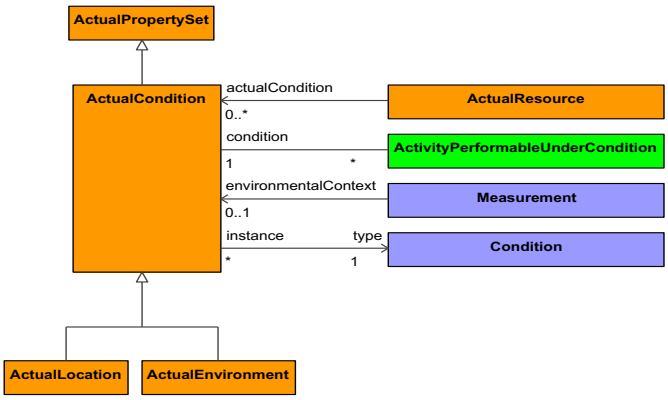

Figure 9:217 - ActualCondition

ActualEnvironment

Package: Parameters

isAbstract: No

Generalization: ActualCondition

Description

An individual that describes the circumstances of an Environment.

Figure 9:218 - ActualEnvironment

ActualLocation

Package: Parameters

isAbstract: No

Generalization: ActualCondition

Description

An individual that describes a physical location, for example using text to provide an address, Geo-coordinates, etc.

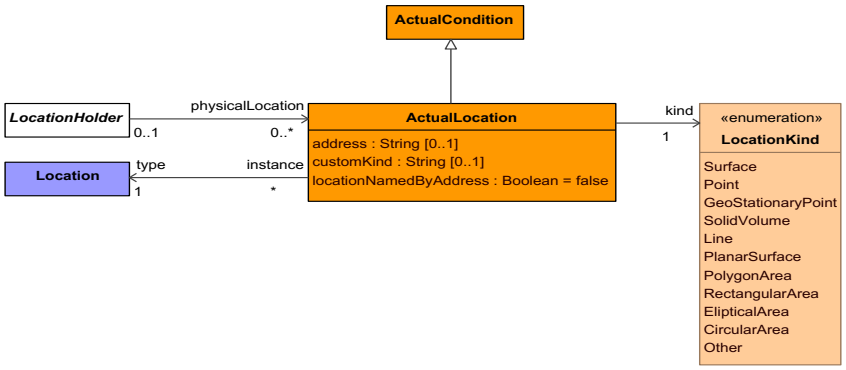

Figure 9:219 - ActualLocation

Attributes

address : String[0..1]	String describing the address of the ActualLocation, i.e. "1600 Pennsylvania avenue", "The White House"
customKind : String[0..1]	String describing a location kind that is not in the LocationKind enumerated list
locationNamedByAddress : Boolean[]	Boolean that indicates if the ActualLocation address is embedded in the ActualLocation name. By default = false.

ActualMeasurement

Package: Parameters

isAbstract: No

Generalization: ActualState

Description

An actual value that is applied to a Measurement.

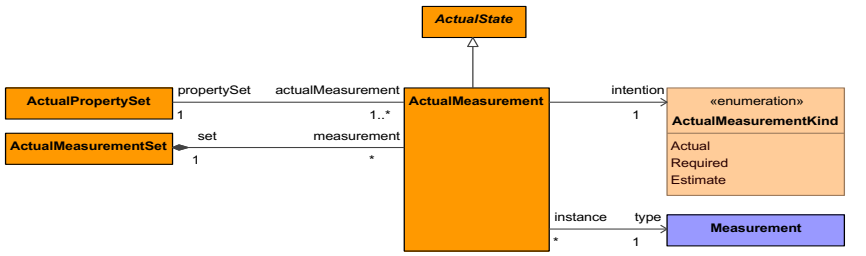

Figure 9:220 - ActualMeasurement

ActualMeasurementSet

Package: Parameters

isAbstract: No

Generalization: ActualPropertySet

Description

A set of ActualMeasurements.

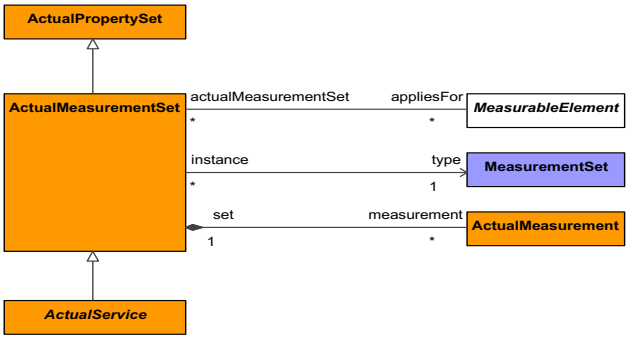

Figure 9:221 - ActualMeasurementSet

ActualPropertySet

Package: Parameters

isAbstract: No

Generalization: ActualState

Description

A set or collection of Actual properties.

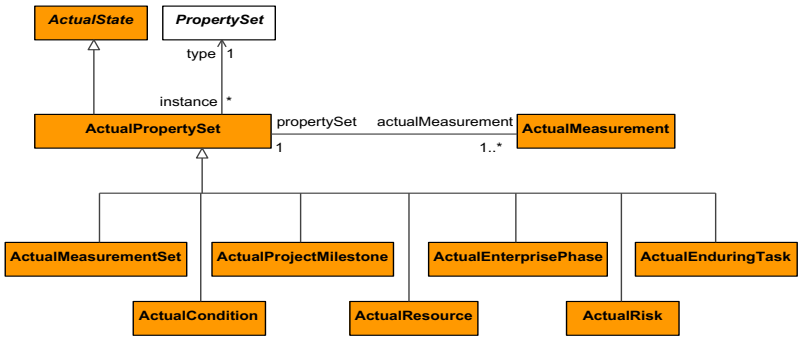

Figure 9:222 - ActualPropertySet

ActualState

Package: Parameters

isAbstract: Yes

Generalization: UAFElement

Description

Abstract element that applies temporal extent to a set of elements realized as Instance Specifications.

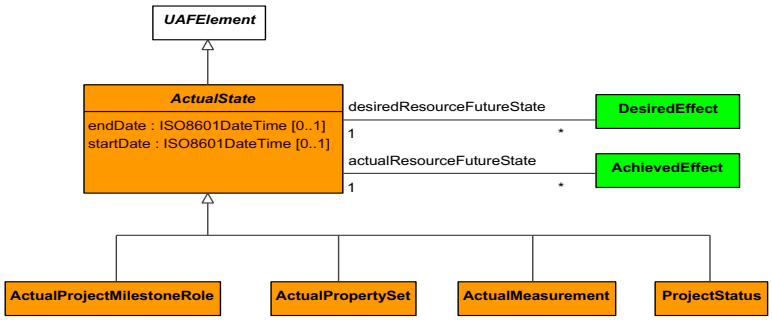

Figure 9:223 - ActualState

Attributes

endDate : ISO8601DateTime[0..1]	End time for all individual elements.
startDate : ISO8601DateTime[0..1]	Start time for all individual elements.

Condition

Package: Parameters

isAbstract: No

Generalization: PropertySet

Description

A type that defines the Location, Environment and/or GeoPoliticalExtent.

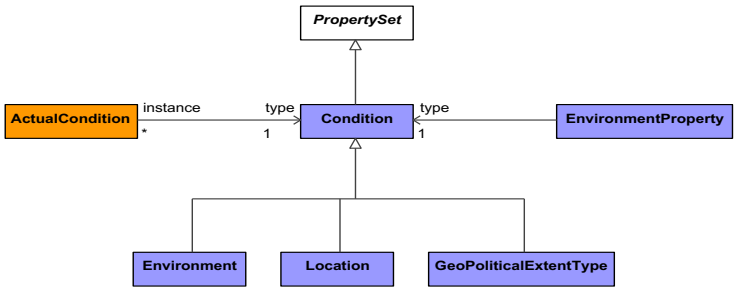

Figure 9:224 - Condition

Environment

Package: Parameters

isAbstract: No

Generalization: Condition

Description

A definition of the environmental factors in which something exists or functions. The definition of an Environment element can be further defined using EnvironmentKind.

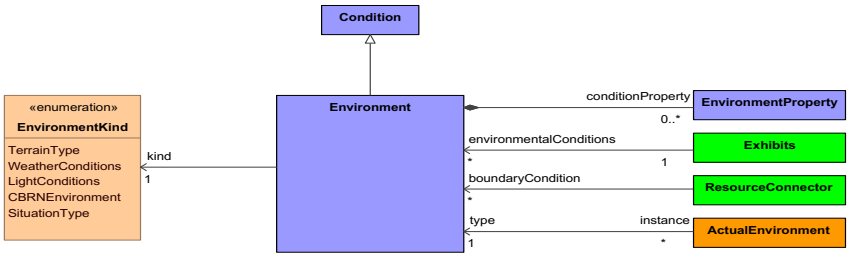

Figure 9:225 - Environment

GeoPoliticalExtentType

Package: Parameters

isAbstract: No

Generalization: Condition, OperationalExchangeItem, ResourceExchangeItem

Description

A type of geospatial extent whose boundaries are defined by declaration or agreement by political parties.

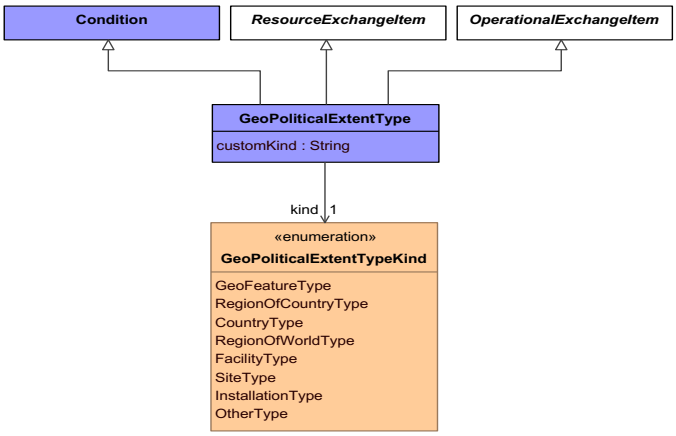

Figure 9:226 - GeoPoliticalExtentType

Attributes

customKind : String[] Captures the kind of GeopoliticalExtentType.

ISO8601DateTime

Package: Parameters

isAbstract: No

Generalization: UAFElement

Description

A date and time specified in the ISO8601 date-time format including timezone designator (TZD): YYYY-MM-DDThh:mm:ssTZD.

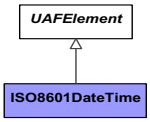

Figure 9:227 - ISO8601DateTime

Location

Package: Parameters

isAbstract: No

Generalization: ConceptItem, Condition

Description

A specification of the generic area in which a LocationHolder is required to be located.

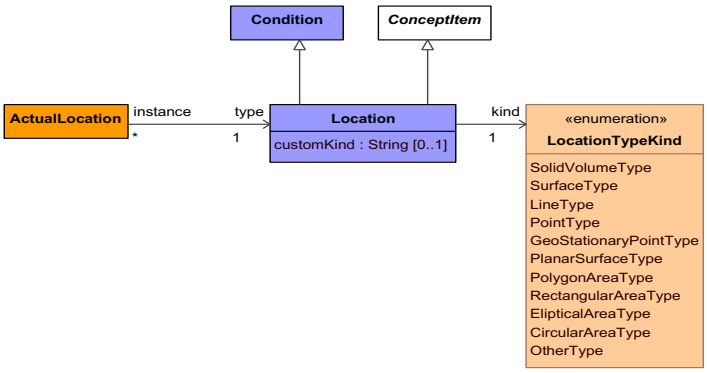

Figure 9:228 - Location

Attributes

customKind : String[0..1] Captures the kind of Location if the LocationTypeKind has been set to "OtherType".

LocationHolder

Package: Parameters

isAbstract: Yes

Generalization: UAFElement

Description

Abstract type, used to group elements that are allowed to be associated with a Location.

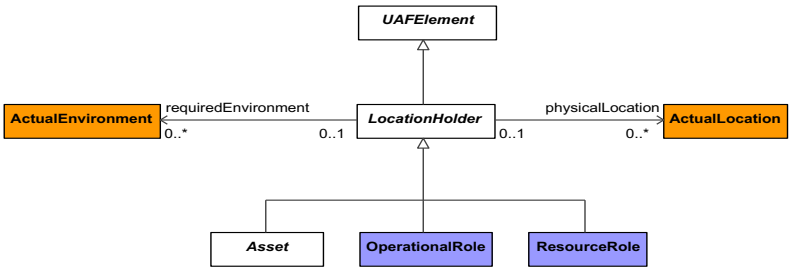

Figure 9:229 - LocationHolder

MeasurableElement

Package: Parameters

isAbstract: Yes

Generalization: UAFElement

Description

Abstract type, grouping elements that can be measured by applying MeasurementSets to them.

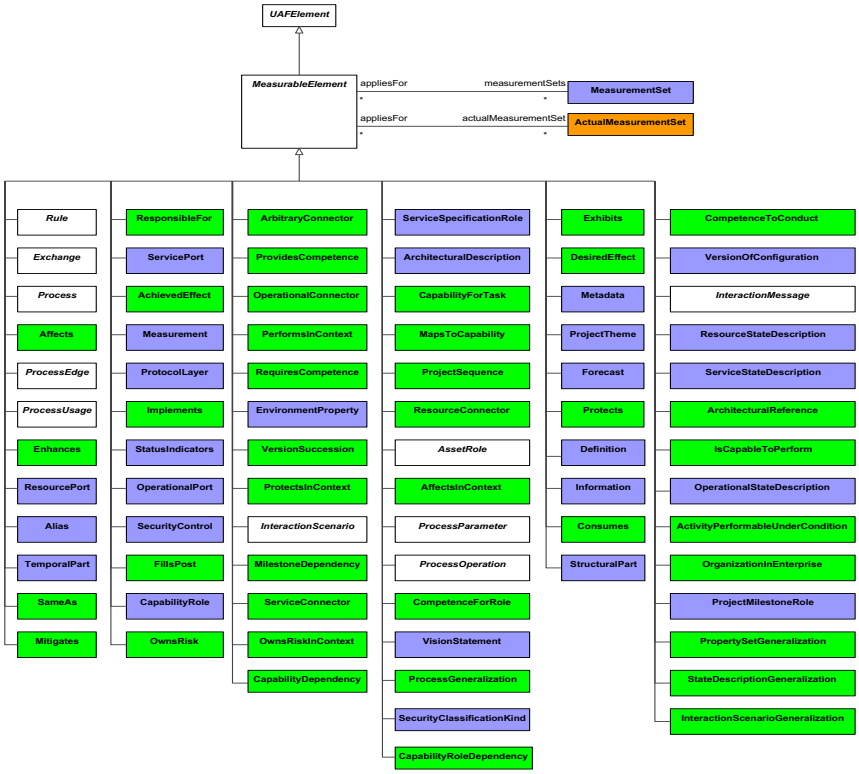

Figure 9:230 - MeasurableElement

Measurement

Package: Parameters

isAbstract: No

Generalization: MeasurableElement

Description

A property of an element representing something in the physical world, expressed in amounts of a unit of measure.

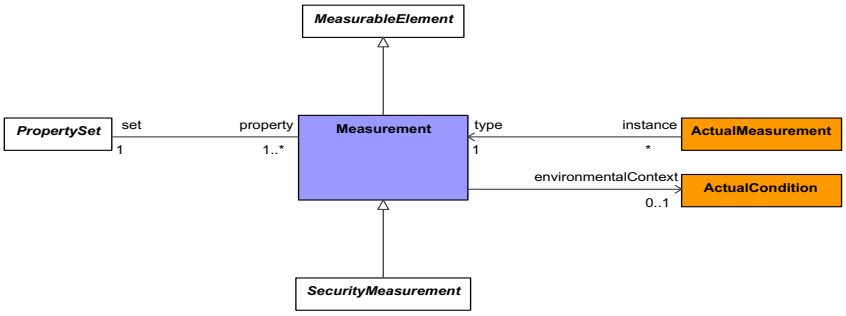

Figure 9:231 - Measurement

MeasurementSet

Package: Parameters

isAbstract: No

Generalization: PropertySet

Description

A collection of Measurements.

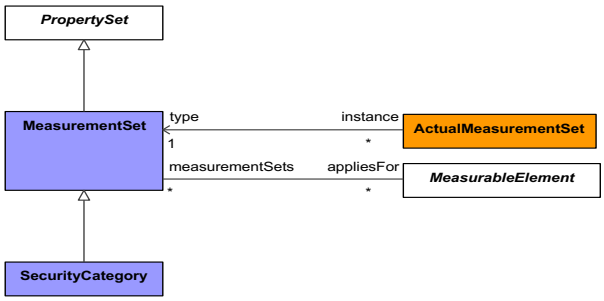

Figure 9:232 - MeasurementSet

PropertySet

Package: Parameters

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type grouping architectural elements that can own Measurements.

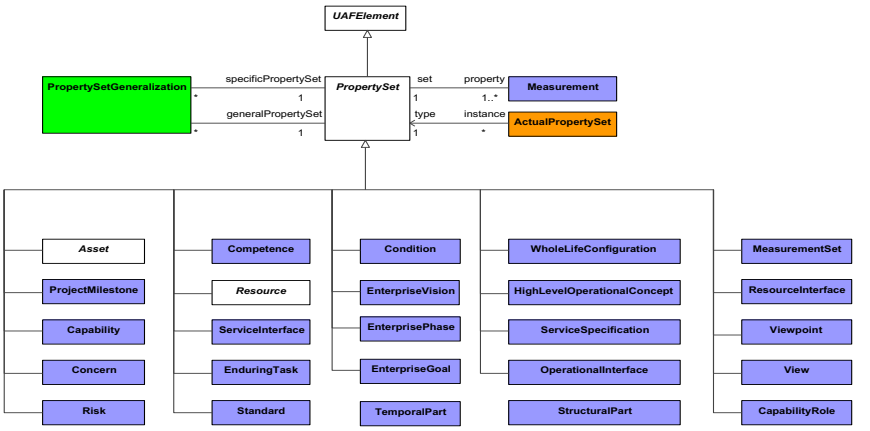

Figure 9:233 - PropertySet

Deleted: 3.1.1 Domain MetaModel::Metadata¶

¶

Stakeholders: Enterprise Architects, people who want to discover the architecture, Technical Managers.¶

¶

Concerns: Captures meta-data relevant to the entire architecture¶

¶

Definition: Provide information pertinent to the entire architecture. Present supporting information rather than architectural models.¶

¶

3.1.1.1 Domain MetaModel::Metadata::Taxonomy¶

¶

ArchitectureMetadata¶

¶

Package: Taxonomy¶

¶

isAbstract: No¶

¶

Generalization: Metadata¶

¶

Description¶

¶

Information associated with an ArchitecturalDescription, that supplements the standard set of tags used to summarize the¶ Architecture. It states things like what methodology was used, notation, etc.¶

¶

Metadata¶

¶

Package: Taxonomy¶

¶

isAbstract: No¶

¶

Generalization: MeasurableElement¶

¶

Description¶

¶

A comment that can be applied to any element in the architecture. The attributes associated with this element details the relationship between the element and its related dublinCoreElement, metaDataScheme, category and name. This allows the element to be referenced using the Semantic Web.¶

¶

Attributes¶

¶

category : String[0..1]→Defines the category of a Metadata element example:¶
http://purl.org/dc/terms/abstract. dublinCoreTag : String[0..1]→A metadata category that is a DublinCore tag. metaDataScheme : String[0..1]→A representation scheme that defines a set of Metadata. name : String[0..1]→The name of the Metadata.¶

3.1.1.2 Domain MetaModel::Metadata::Structure¶

¶

EnvironmentProperty¶

¶

Package: Structure¶

¶

isAbstract: No¶

¶

Generalization: MeasurableElement¶
