USE OF SPECIFICATION - TERMS, CONDITIONS & NOTICES

The material in this document details an Object Management Group specification in accordance with the terms, conditions and notices set forth below. This document does not represent a commitment to implement any portion of this specification in any company's products. The information contained in this document is subject to change without notice.

LICENSES

The companies listed above have granted to the Object Management Group, Inc. (OMG) a nonexclusive, royalty-free, paid up, worldwide license to copy and distribute this document and to modify this document and distribute copies of the modified version. Each of the copyright holders listed above has agreed that no person shall be deemed to have infringed the copyright in the included material of any such copyright holder by reason of having used the specification set forth herein or having conformed any computer software to the specification.

Subject to all of the terms and conditions below, the owners of the copyright in this specification hereby grant you a fully-paid up, non-exclusive, nontransferable, perpetual, worldwide license (without the right to sublicense), to use this specification to create and distribute software and special purpose specifications that are based upon this specification, and to use, copy, and distribute this specification as provided under the Copyright Act; provided that: (1) both the copyright notice identified above and this permission notice appear on any copies of this specification; (2) the use of the specifications is for informational purposes and will not be copied or posted on any network computer or broadcast in any media and will not be otherwise resold or transferred for commercial purposes; and (3) no modifications are made to this specification. This limited permission automatically terminates without notice if you breach any of these terms or conditions. Upon termination, you will destroy immediately any copies of the specifications in your possession or control.

PATENTS

The attention of adopters is directed to the possibility that compliance with or adoption of OMG specifications may require use of an invention covered by patent rights. OMG shall not be responsible for identifying patents for which a license may be required by any OMG specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. OMG specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

GENERAL USE RESTRICTIONS

Any unauthorized use of this specification may violate copyright laws, trademark laws, and communications regulations and statutes. This document contains information which is protected by copyright. All Rights Reserved. No part of this work covered by copyright herein may be reproduced or used in any form or by any

means--graphic, electronic, or mechanical, including photocopying, recording, taping, or information storage and retrieval systems--without permission of the copyright owner.

DISCLAIMER OF WARRANTY

WHILE THIS PUBLICATION IS BELIEVED TO BE ACCURATE, IT IS PROVIDED "AS IS" AND MAY CONTAIN ERRORS OR MISPRINTS. THE OBJECT MANAGEMENT GROUP AND THE COMPANIES LISTED ABOVE MAKE NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS PUBLICATION, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF TITLE OR OWNERSHIP, IMPLIED WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR USE. IN NO EVENT SHALL THE OBJECT MANAGEMENT GROUP OR ANY OF THE COMPANIES LISTED ABOVE BE LIABLE FOR ERRORS CONTAINED HEREIN OR FOR DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL, RELIANCE OR COVER DAMAGES, INCLUDING LOSS OF PROFITS, REVENUE, DATA OR USE, INCURRED BY ANY USER OR ANY THIRD PARTY IN CONNECTION WITH THE FURNISHING, PERFORMANCE, OR USE OF THIS MATERIAL, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

The entire risk as to the quality and performance of software developed using this specification is borne by you. This disclaimer of warranty constitutes an essential part of the license granted to you to use this specification.

RESTRICTED RIGHTS LEGEND

Use, duplication or disclosure by the U.S. Government is subject to the restrictions set forth in subparagraph (c) (1) (ii) of The Rights in Technical Data and Computer Software Clause at DFARS 252.227-7013 or in subparagraph (c)(1) and (2) of the Commercial Computer Software - Restricted Rights clauses at 48 C.F.R. 52.227-19 or as specified in 48 C.F.R. 227-7202-2 of the DoD F.A.R. Supplement and its successors, or as specified in 48 C.F.R. 12.212 of the Federal Acquisition Regulations and its successors, as applicable. The specification copyright owners are as indicated above and may be contacted through the Object Management Group, 109 Highland Avenue, Needham, MA 02494, U.S.A.

TRADEMARKS

CORBA®, CORBA logos®, FIBO®, Financial Industry Business Ontology®, FINANCIAL INSTRUMENT GLOBAL IDENTIFIER®, IIOP®, IMM®, Model Driven Architecture®, MDA®, Object Management Group®, OMG®, OMG Logo®, SoaML®, SOAML®, SysML®, UAF®, Unified Modeling Language®, UML®, UML Cube Logo®, VSIPL®, and XMI® are registered trademarks of the Object Management Group, Inc.

For a complete list of trademarks, see: http://www.omg.org/legal/tm_list.htm. All other products or company names mentioned are used for identification purposes only, and may be trademarks of their respective owners.

COMPLIANCE

The copyright holders listed above acknowledge that the Object Management Group (acting itself or through its designees) is and shall at all times be the sole entity that may authorize developers, suppliers and sellers of computer software to use certification marks, trademarks or other special designations to indicate compliance with these materials.

Software developed under the terms of this license may claim compliance or conformance with this specification if and only if the software compliance is of a nature fully matching the applicable compliance points as stated in the specification. Software developed only partially matching the applicable compliance points may claim only that the software was based on this specification, but may not claim compliance or conformance with this specification. In the event that testing suites are implemented or approved by Object Management Group, Inc., software developed using this specification may claim compliance or conformance with the specification only if the software satisfactorily completes the testing suites.

Preface

OMG

Founded in 1989, the Object Management Group, Inc. (OMG) is an open membership, not-for-profit computer industry standards consortium that produces and maintains computer industry specifications for interoperable, portable and reusable enterprise applications in distributed, heterogeneous environments. Membership includes Information Technology vendors, end users, government agencies and academia. OMG member companies write, adopt, and maintain its specifications following a mature, open process. OMG's specifications implement the Model Driven Architecture® (MDA®), maximizing ROI through a full-lifecycle approach to enterprise integration that covers multiple operating systems, programming languages, middleware and networking infrastructures, and software development environments. OMG's specifications include: UML® (Unified Modeling Language™); CORBA® (Common Object Request Broker Architecture); CWM™ (Common Warehouse Metamodel); and industry-specific standards for dozens of vertical markets. More information on the OMG is available at *http://www.omg.org/*.

OMG Specifications

As noted, OMG specifications address middleware, modeling and vertical domain frameworks. All OMG Specifications are available from this URL: *http://www.omg.org/spec*

Specifications are organized by the following categories:

Business Modeling Specifications

Middleware Specifications

- CORBA/IIOP
- Data Distribution Services
- Specialized CORBA IDL/Language Mapping Specifications

Modeling and Metadata Specifications

- UML, MOF, CWM, XMI
- UML Profile Specifications

Platform Independent Model (PIM) - Platform Specific Model (PSM) - Interface Specifications

- CORBAServices
- CORBAFacilities
- OMG Domain Specifications
- CORBA Embedded Intelligence Specifications
- CORBA Security Specifications

All of OMG's formal specifications may be downloaded without charge from our website. (Products implementing OMG specifications are available from individual suppliers.) Copies of specifications, available in PostScript and PDF format, may be obtained from the Specifications Catalog cited above or by contacting the Object Management Group, Inc. at: OMG Headquarters 109 Highland Avenue, Needham, MA 02494 USA Tel: +1- 781-444-0404 Fax: +1-781-444-0320 Email: *pubs@omg.org*

Certain OMG specifications are also available as ISO standards. Please consult *http://www.iso.org*

Typographical Conventions

The type styles shown below are used in this document to distinguish programming statements from ordinary English. However, these conventions are not used in tables or section headings where no distinction is necessary.

Times/Times New Roman - 10 pt.: Standard body text

Helvetica/Arial - 10 pt. Bold: OMG Interface Definition Language (OMG IDL) and syntax elements.

`Courier - 10 pt. Bold:` Programming language elements.

Helvetica/Arial - 10 pt: Exceptions

Note – Terms that appear in *italics* are defined in the glossary. Italic text also represents the name of a document, specification, or other publication.

Issues

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page http://www.omg.org, under Documents, Report a Bug/Issue (http://issues.omg.org/issues/create-new-issue).

1. Scope

1.1 Introduction

There are four parts to this specification, two are normative and two informative. The normative parts are:

1. The UAF Domain Metamodel (DMM) (this document) that provides the definition of concepts, relationships and viewpoints for the framework. The UAF DMM is the basis for any implementation of UAF including non-UML/SysML implementations.
2. The UAF ~~Profile~~ Modeling Language (UAFML~~P~~) (see document dtc/~~19~~2021-~~11~~06-~~03~~15) is a UML/SysML implementation of the UAF DMM

The informative parts are:

3. The UAF Traceability, Annex A (see document dtc/2021~~19~~-~~11~~06-~~07~~12), which details the mappings between the UAF and the various frameworks and languages that contribute to the UAF.
4. The UAF Example Model, Annex B (see document dtc/2021~~19~~-~~11~~06-~~01~~8), which illustrates a practical usage of UAF.
5. The UAF Enterprise Architecture Guide (EAG), Annex C (see document dtc/~~19~~2021-11~~06~~-0918), which provides guidance on how to use the UAFML to model an architecture.

1.2 UAF Background

UAF evolved from the Unified Profile for DoDAF and MODAF (UPDM), version 2.1. UAF extends the scope of UPDM and generalizes it to make it applicable to commercial as well as military architectures. The intent of UAF is to provide a standard representation for describing enterprise architectures using a Model Based Systems Engineering (MBSE) approach.

The core concepts in the UAF are based upon the DoDAF 2.0.2 Domain Metamodel (DM2) and the MODAF ontological data exchange mechanism (MODEM), Security Views from Canada's Department of National Defense Architecture Framework (DNDAF) and the North Atlantic Treaty Organization (NATO) Architecture Framework (NAF) v 4.

UAF models describe a system[1] from a set of stakeholders' concerns such as security or information through a set of predefined viewpoints. Developed models can also reflect custom viewpoints or users can develop more formal extensions for new viewpoints.

The UAFML~~P~~ can be used to develop architectures compliant with:

- Department of Defense Architecture Framework (DoDAF) version 2.02
- Ministry of Defence Architecture Framework (MODAF) version 1.3
- North Atlantic Treaty Organization (NATO) Architecture Framework (NAF) version 3.1
- North Atlantic Treaty Organization (NATO) Architecture Framework (NAF) version 4

UAF v 1.2~~1~~ supports the capability to:

- model architectures for a broad range of complex systems, which may include hardware, software, data, personnel, and facility elements;
- model consistent architectures for system-of-systems (SoS) down to lower levels of design and implementation;
- support the analysis, specification, design, and verification of complex systems; and

[1] The term system is used from: "Systems and software engineering -- Architecture description," http://www.iso.org/iso/catalogue_detail.htm?csnumber=50508

- improve the ability to exchange architecture information among related tools that are SysML based.

1.3 Intended Usage

The UAF enables the modeling of strategic capabilities, operational scenarios, services, resources, personnel, security, projects, standards, measures and requirements; which supports best practices through, separation of concerns and abstractions. In addition, the UAF enables the modeling of related architecture concepts such as:

- System of Systems (SoS),
- information exchanges consistent with the National Information Exchange Model (NIEM),
- DoD's doctrine, organization, training material, leadership & education, personnel, and facilities (DOTMLPF)
- UK Ministry of Defence Lines of Development (DLOD) elements,
- Human Computer Interfaces (HCI).

Further, The UAF conforms to terms defined in the ISO/IEC/IEEE 42010 standard for architecture description, where the terms: architecture, architecture description (AD), architecture framework, architecture view, architecture viewpoint, concern, environment, model kind, stakeholder [ISO/IEC/IEEE 42010:2011] form correspondence rules specified as constraints on UAF.

1.4 Related Documents

The specification includes a meta~~-~~model and description as separate documents. Other ~~appendicies~~appendices are also provided as separate documents. The table below provides a listing of these documents:

Table 1:1 - Table of Related Documents

dtc/2021-11-01~~dtc/19-06-16~~	The UAF Domain MetaModel (DMM)
dtc/2021-11-03~~dtc/19-06-15~~	The UAF ~~Profile~~ Modeling Language (UAFML~~P~~)
dtc/2021-11-07~~dtc/19-06-17~~	Appendix A that contains a separate traceability subsection from UAFML~~P~~ to each of the frameworks listed in Section 1.2 of this specification
dtc/2021-11-08~~dtc/19-06-18~~	Appendix B: An example of how the language can be used to represent a ~~UAFP~~ UAFML architecture

2. Conformance

UAF specifies four types of conformance.

Type 1 Conformance: - UAF View specification conformance. A tool demonstrating view specification conformance shall implement a version of all the view specifications defined in the UAF Grid, with the exception of the view specifications in the ~~Metadata Domain~~ Architecture Management Viewpoint~~.~~ Optionally the tool vendor can implement other donor framework viewpoints, for instance DoDAF, MODAF or NAF based upon the mapping between them and UAF provided in Appendix A (dtc/2021-11-07 ~~dtc/19-06-17~~)

Type 2 Conformance: - UAF Conceptual Syntax Conformance. A tool demonstrating conceptual syntax conformance is consistent with the concepts, relationships and constraints defined in the UAF DMM (this document). UAF Conceptual Syntax Conformance implies Type 1 Conformance.

Type 3 Conformance: - UAF Formal Syntax Conformance. A tool demonstrating formal syntax conformance:

- enables instances of concrete ~~UAFP~~ UAFML stereotypes defined in the ~~UAFP~~ UAFML (dtc/2021-11-03 ~~dtc/19-06-15~~)
- complies with the constraints defined in the ~~UAFP~~ UAFML (dtc/2021-11-03 ~~dtc/19-06-15~~)
- complies with the SysML version 1.~~5~~ 6 Concrete Syntax Conformance (formal/19-11-01 ~~formal/19-11-01 formal/17-05-01~~)
- UAF Formal Syntax Conformance implies Type 2 Conformance.

Type 4 Conformance: - UAF Model interchange conformance. A tool demonstrating model interchange conformance can import and export conformant XMI for all valid ~~UAFP~~ UAFML models. Model interchange conformance implies Type 3 Conformance.

4. Terms and Definitions

No new terms and definitions have been required to create this specification. All terms are available in the normative references or bibliographic citations for detailed explanation. The modeling concepts specified in this standard e.g., MetaModel Elements, Viewpoints, Aspects, View Specifications, etc. are defined in the appropriate section for that concept. Additional terms are defined in Appendix C: Enterprise Architecture Guide (EAG).

6. Additional Information

6.1 Changes to Adopted OMG Specifications

This specification completely replaces Unified Architecture Framework (UAF), version 1.~~0~~ 1
https://www.omg.org/spec/UAF/About-UAF/

6.2 Language Architecture

The UAF specification reuses a subset of UML 2.5.1 and SysML 1.~~5~~ 6 and provides additional extensions needed to address requirements in the UPDM 3.0 RFP Mandatory Requirements. Those requirements form the basis for this specification. This specification documents the language architecture in terms of UML 2.5.1 and SysML 1.~~5~~ 6 and specifies how to implement UAF. This clause explains design principles and how they are applied to define the UAF language architecture.

6.3 Philosophy

The UAF development uses a model-driven approach. A simple description of the work process is:

- A Domain Metamodel (DMM) uses UML Class models to represent individuals, types and tuples that maps the concepts defined in DoDAF, MODEM, NAF, and other frameworks. ~~A Domain Metamodel (DMM) uses UML Class models to represent individuals, types and tuples that aggregate the concepts defined in DoDAF, MODEM, NAF, DNDAF and other frameworks.~~
- The aligned and renamed viewpoints from the various frameworks provide a common generic name for each viewpoint. It should be noted that the term viewpoint is in the context of ISO 42010 where a viewpoint is the specification of a view. The UAF viewpoints are mapped to the corresponding viewpoint in the relevant contributing framework. It is the viewpoints described in the DMM that provides the basis for the Unified Architecture Framework (UAF).
- The UAF provides an abstraction layer that separates the underlying UAF metamodel from the presentation layer. The results of this mapping are given in Appendix A (see document dtc/2021-11-07) ~~dtc/19-06-17~~ and an overview of the viewpoints in a grid format are given in this document.
- The intent of the UAF is to provide a Domain MetaModel usable by non-UML/SysML tool vendors who may wish to implement the UAF within their own tool and metalanguage.
- The Unified Architecture Framework ~~Profile~~ Modeling Language (~~UAFP~~UAFML) is the standard implementation of the UAF DMM. It was created by mapping the UAF concepts and relationships to corresponding stereotypes in the ~~UAFP~~UAFML Profile.
- The ~~UAFP~~ UAFML analysis and refactoring reflects language architecture, tool implementation, and reuse considerations.
- The specification is generated from the UML model used to describe the UAF DMM and ~~UAFP~~UAFML. This approach allows the team to concentrate on architecture issues rather than documentation production. The UML tool automatically maintains consistency. The UML tool improves maintenance and enables traceability between the UAF and the ~~UAFP~~ UAFML where every stereotype is linkable to the UAF element using UML Abstraction relationship.

6.4 Core Principles

The fundamental design principles for UAF DMM are:

- **Requirements-driven**: UAF is intended to satisfy the requirements of the UPDM 3.0 RFP Mandatory Requirements.
- **Influence from donor Frameworks:** The DMM was based upon an aggregation of concepts and relationships from the donor frameworks.
- **IDEAS Ontology driven:** The DMM was based upon a simplified version of the IDEAS ontology, see chapter 8.
- **DMM Notation:** The DMM was expressed using UML class diagram notation.

- **Reusability of UML Metamodel concepts:** The UAF DMM reuses a number of concepts from the UML Metamodel, such as Statemachines, Activities and Interactions. The explicit relationship to these concepts enables the UAF DMM to reuse UML semantics instead of reinventing its own semantics.
- **Reusability of BPMN concepts:** The UAF DMM reuses a number of concepts from BPMN, such as processes. The explicit relationship to these concepts enables the UAF DMM to reuse BPMN semantics instead of reinventing its own semantics.

7.UAF Grid

Due to the complexity of managing the multiple viewpoints with overlapping concerns and metamodels, the standard viewpoints are refactored as described in the donor frameworks into a more manageable format. This decision led to the development of the UAF grid which is described below.

The grid is a way of showing how the various ~~viewpoints (known as~~ *view specifications* (cells) ~~in the rest of document)~~ correspond to *viewpoints (prev. known as domains)* (horizontal rows) and the *aspects (prev. known as model kinds)* (the columns) that describe the view specification. The intent of the grid is not to be complete, but to capture the information that is present in the frameworks that contributes to the UAF, consequently, some gaps are evident.

Commented [AM26]: UAF12-59
UAF12-54

Notes related to suffixes in the grid

a. The view specifications in the ~~Metadata~~ Architecture Management ~~Domain~~ viewpoint ~~are not modeled as part of the UAF but~~ are architectural artifacts that contribute to the success in defining and developing an architecture.

b. To be able to evaluate architecture behavior and constraints (i.e., non-functional requirements) it is necessary to define actual instances of the architectural elements. The expectation is that tool vendors intending to implement the UAF have capabilities native to their tools to enable behavioral simulation and the evaluation of measures and constraints through parametric diagrams or a proprietary equivalent.

c. The information model is an ~~column~~ aspect across the domains and can be defined in any of its forms, i.e., Conceptual, Logical or Physical. The expectation is that most developers of the information model will use the Conceptual or Logical forms of the data model when using an abstract modeling tool.

d. The parameters column captures the measures ~~and~~, environments, and risks across the architecture in ~~all~~ the different ~~domains~~viewpoints.

~~e. The expectation is that the physical schema model would not be defined in the UAF. Any tool implementing the framework provides a means to import or link to representations of the physical model.~~

~~f.~~ The ~~Metadata~~ Architecture Extensions~~Taxonomy~~ view specification provides a means to extend the framework to other domains.

The detailed mapping between the view specifications of the UAF shown in the grid and the viewpoints from the donor frameworks is described in dtc/2021-11-07~~dtc\2019-06-17~~. A definition for each view specification in the grid is described in the following chapters.

7.1 Descriptions of ~~Domains~~ Viewpoints and ~~Model Kinds~~Aspects

Table 7:1 - Definitions for the ~~Domains~~Viewpoints

~~Domain~~Viewpoint	Acronym	Description
~~Metadata~~Architecture Management	~~Md~~Am	Identifies the metadata required to develop a suitable architecture that is fit for its purpose.
Strategic	St	Capability management process. Describes the capability taxonomy, composition, dependencies and evolution.
Operational	Op	Illustrates the Logical Architecture of the enterprise. Describes the requirements, operational behavior, structure, and exchanges required to support (exhibit) capabilities. Defines all operational elements in an implementation/solution independent manner.
Services	Sv	The Service-Orientated View (SOV) is a description of services needed to directly support the operational domain as described in the Operational View. A service within MODAF is understood in its broadest sense, as a unit of work through which a provider provides a useful result to a consumer. DoDAF: The Service Views within the Services Viewpoint describe the design for service-based solutions to support operational development processes (JCIDS) and Defense Acquisition System or capability development within the Joint Capability Areas.
Personnel	~~Pr~~Ps	Defines and explores organizational resource types. Shows the taxonomy of types of organizational resources as well as connections, interaction and growth over time.
Resources	Rs	Captures a solution architecture consisting of resources, e.g.,organizational, software, artifacts, capability configurations, and natural resources that implement the operational requirements. Further design of a resource is typically detailed in SysML or UML.
Security	Sc	Security assets and security enclaves. Defines the hierarchy of security assets and asset owners, security constraints (policy, laws, and guidance) and details where they are located (security enclaves).

Projects	Pj	Describes projects and project milestones, how those projects deliver capabilities, the organizations contributing to the projects and dependencies between projects.
Standards	Sd	MODAF: Technical Standards Views are extended from the core DoDAF views to include non-technical standards such as operational doctrine, industry process standards, etc. DoDAF: The Standards Views within the Standards Viewpoint are the set of rules governing the arrangement, interaction, and interdependence of solution parts or elements.
Actual Resources	Ar	The analysis, e.g., evaluation of different alternatives, what-if, trade-offs, V&V on the actual resource configurations. Illustrates the expected or achieved actual resource configurations.

Table 7:2 - Definitions of the ~~Model Kinds~~Aspects

~~UAF12-41~~

~~Model Kind~~Aspect	Acronym	Description
Motivation	Mv	Captures motivational elements e.g., drivers, challenges, opportunities and concerns that pertain to enterprise transformation efforts, and different types of requirements, e.g., operational, services, personnel, resources, and security controls.
Taxonomy	Tx	Presents all the elements as a standalone structure. Presents all the elements as a specialization hierarchy, provides a text definition for each one and references the source of the element
Structure	Sr	Describes the break down of structural elements e.g. logical performers, systems, projects, etc. into their smaller parts~~Describes the definitions of the dependencies, connections, and relationships between the different elements.~~
Connectivity	Cn	Describes the connections, relationships, and interactions between the different elements.
Processes	Pr	Captures activity based behavior and flows. It describes activities, their Inputs/Outputs, activity actions and flows between them.
States	St	Captures state-based behavior of an element. It is a graphical representation of states of a structural element and how it responds to various events and actions.
~~Interaction Scenarios~~Sequences	Sq~~Is~~	Expresses a time ordered examination of the exchanges as a result of a particular scenario. Provides a time-ordered

~~Model Kind~~Aspect	Acronym	Description
		examination of the exchanges between participating elements as a result of a particular scenario.
Information	If	Address the information perspective on operational, service, and resource architectures. Allows analysis of an architecture's information and data definition aspect, without consideration of implementation specific issues.
Constraints	Ct	Details the measurements that set performance requirements constraining capabilities. Also defines the rules governing behavior and structure.
Roadmap	Rm	Addresses how elements in the architecture change over time. ~~Also, how at different points in time or different periods of time.~~
Traceability	Tr	Describes the mapping between elements in the architecture. This can be between different viewpoints within domains as well as between domains. It can also be between structure and behaviors.

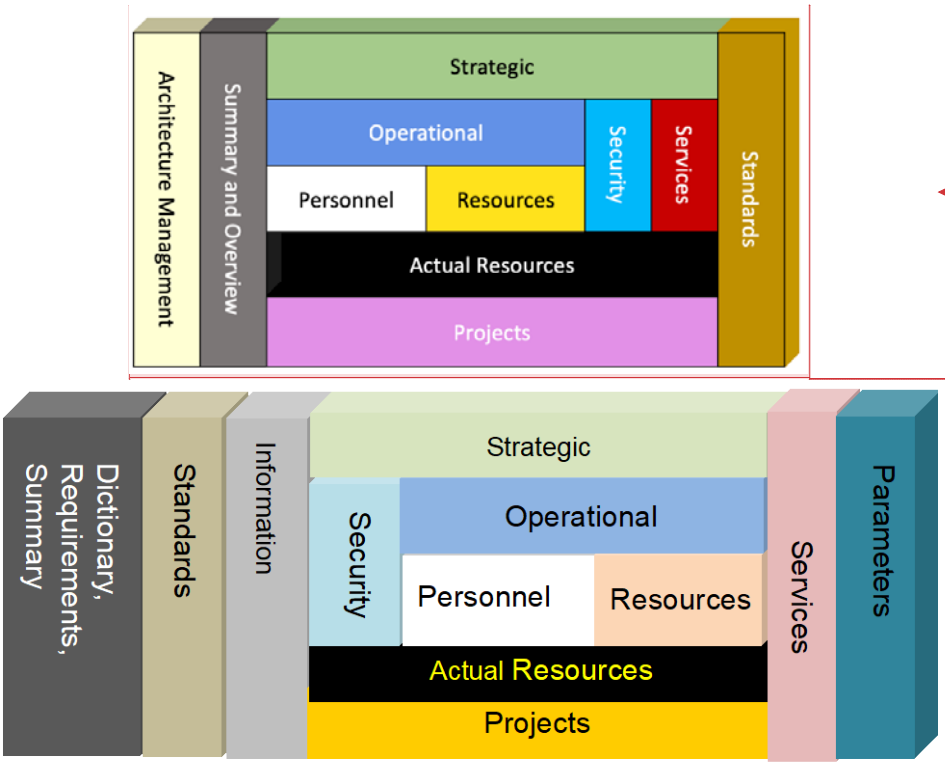
Commented [AM46]: UAF12-24



Commented [KG47]: UAF12-54

Formatted: Centered, Don't keep with next

Figure 7:2 ~~–~~ ~~Domain~~ Viewpoint Interrelationships

Where a ~~Domain~~ Viewpoint is shown vertically the intent is to show that the ~~Domain~~ Viewpoint is a cross cutting concern that goes across the levels of abstraction in the architecture.

Where a ~~Domain~~ Viewpoint is shown horizontally the intent is to show that the ~~Domain~~ Viewpoint exists in a layer of abstraction between the ~~Domains~~ Viewpoints above and below it and there is an interrelationship with the ~~Domains~~ Viewpoints either side of it.

~~7.4~~7.3 Domain Metamodel Diagram Legend

Note that the diagrams rely on color to aid the reader in understanding the model. Please refer to the legend below to understand the diagrams.

The following is the legend of element colors used in the DMM and what they denote.

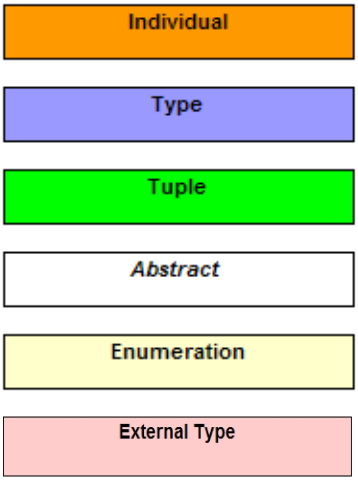


Figure 7:3 - Legend of color codes for element types defined in UAF

The meaning of the element types in the UAF are based upon concepts put forth in the International Defence Enterprise Architecture Specification (IDEAS).

- An Individual denotes a single instance of an element
- A Type denotes a set of Individuals
- A Tuple denotes a relationship that exists between elements
- An Abstract denotes that the element has no direct use but is a means of construction
- An Enumeration is a complete, ordered listing of all the items in a collection
- An External Type is an element that exists outside of the core DMM but is ~~referencable~~referenceable by elements in the DMM

8.1 View Specifications

This section documents each of the view specifications of UAF.

8.1.1 View Specifications::Architecture Management

Commented [AM49]: UAF12-54

Stakeholders: Enterprise Architects, people who want to discover the architecture, Technical Managers.

Concerns: Captures meta-data relevant to the entire architecture

Definition: Provide information pertinent to the entire architecture. Present supporting information rather than architectural models.

View Specifications::Architecture Management::Motivation

Contains the diagrams that document the Architecture Management Motivation View Specification.

View Specifications::Architecture Management::Motivation::Architecture Principles

Stakeholders: Enterprise Architects, Enterprise Systems Engineers, Model Managers, System Architects.

Concerns: alignment of architecture with architecture heuristics, guidelines and principles.

Definition: identifies relevant architectural principles and other guidelines to be used in architecture development and evaluation.

Recommended Implementation: SysML Block Diagram, tabular format

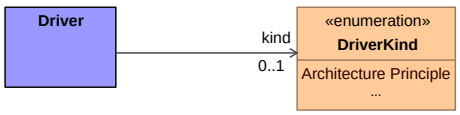

Figure 8:1 - Architecture Principles

Elements

- Driver

~~View Specifications::Metadata~~

~~Stakeholders: Enterprise Architects, Technical Managers.~~
~~Concerns: architecture development process, architecture traceability, metamodel and its extensions, architecture versioning.~~
~~Definition: Identifies the metadata required to develop a suitable architecture that is fit for its purpose.~~

~~View Specifications::Metadata::Taxonomy~~

Commented [KG50]: UAF12-54

~~Stakeholders: Enterprise Architects, Technical Managers.~~

~~Concerns: metamodel and its extensions.~~

~~Definition: captures user defined metamodel extensions~~

~~Recommended Implementation: UML Profile Diagram, SysML Block Definition Diagram~~

View Specifications::Architecture Management::Structure

Commented [KG51]: UAF12-54

Contains the diagrams that document the Architecture Management Structure View Specification.

View Specifications::Architecture Management::Structure::Architecture Views

Stakeholders: Enterprise Architects, Model Managers, Modelers, Technical Managers.

Concerns: domains, viewpoints, aspects, model kinds, and view specifications that are used to describe the architecture.

Definition: (i) lists predefined and custom domains, model kinds, viewpoints, aspects and view specifications (ii) and identify the key stakeholders and their perspectives and concerns.

Recommended Implementation: SysML Block Definition Diagram, SysML Package Diagram.

View Specifications::Architecture Management::Processes

Commented [KG53]: UAF12-54

Contains the diagrams that document the Architecture Management Processes View Specification.

View Specifications::Architecture Management::Processes::Architecture Development Method

Stakeholders: Enterprise Architects, Model Managers, Modelers, Enterprise Systems Engineers.

Concerns: development sequence of models and views and how they are related to each other.

Definition: defines workflow or process steps used in managing the architecture development.

Recommended Implementation: SysML Activity Diagram, text.

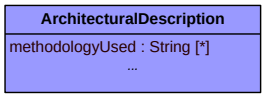

Figure 8:4 - Architecture Development Method

Elements

- ArchitecturalDescription

~~View Specifications::Metadata::Processes~~

~~Stakeholders: Enterprise Architects, people who want to understand the architecture development process, Technical Managers.~~

~~Concerns: methodology used.~~

~~Definition: methodology used in developing the architecture.~~

~~Recommended Implementation: SysML Activity Diagram, text.~~

View Specifications::Architecture Management::States

Commented [KG54]: UAF12-54

Contains the diagrams that document the Architecture Management States View Specification.

View Specifications::Architecture Management::States::Architecture Status

Stakeholders: Enterprise Architects, people who want to understand the architecture governance, Technical Managers.

Concerns: architecture status.

Definition: captures version number and approval workflow of the architecture. Recommended Implementation: SysML State Machine Diagram, state table, text.

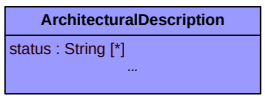

Figure 8:5 - Architecture Status

Elements

- ArchitecturalDescription

~~View Specifications::Metadata::States~~

~~Stakeholders: Enterprise Architects, people who want to understand the architecture governance, Technical Managers.~~

~~Concerns: architecture status.~~

~~Definition: captures version number and approval workflow of the architecture.~~

~~Recommended Implementation: SysML State Machine Diagram, state table, text.~~

View Specifications::Architecture Management::Information

Commented [KG55]: UAF12-54

Contains the diagrams that document the Architecture Management Information View Specification.

View Specifications::Architecture Management::Information::Dictionary

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects.

Concerns: provides a central reference for a given architecture's data and metadata. It enables the set of architecture description to stand alone, with minimal reference to outside resources.

Definition: contains definitions of terms used in the given architecture. It consists of textual definitions in the form of a glossary, their taxonomies, and their metadata (i.e., data about architecture data), including metadata for any custom-tailored views. Architects should use standard terms where possible (i.e., terms from existing, approved dictionaries, glossaries, and lexicons).

Recommended Implementation: text, table format.

~~Recommended Implementation: SysML Block Definition Diagram, SysML Package Diagram, tabular format.~~

~~8.1.7~~8.1.2 View Specifications::Summary & Overview

Stakeholders: Executives, PMs, Enterprise Architects.
Concerns: executive-level summary information in a consistent form.
Definition: provides executive-level summary information in a consistent form that allows quick reference and comparison between architectural descriptions. Includes assumptions, constraints, and limitations that may affect high-level decisions relating to an architecture-based work programme.

View Specifications::Summary & Overview::Summary & Overview

Stakeholders: Decision makers, Solution Providers, Systems Engineers, Software Architects, Business Architects.
Concerns: quick overview of an architecture description and summary of analysis. In the initial phases of architecture development, it serves as a planning guide. Upon completion of an architecture, it provides a summary of findings, and any conducted analysis.
Definition: provides executive-level summary information in a consistent form that allows quick reference and comparison among architectures. The Summary and Overview includes assumptions, constraints, and limitations that may affect high-level decision processes involving the architecture.
Recommended Implementation: text, free form diagram, table format.

Contains the diagrams that document the Security Constraints View Specification~~Viewpoint~~.

Commented [KG198]: UAF12-41

View Specifications::Security::Constraints::Security Constraints

Stakeholders: Security Architects, Security Engineers, Risk Analysts.
Concerns: (i) Security-related policy, guidance, laws and regulations as applicable to assets, (ii) threats, vulnerabilities, and risk assessments as applicable to assets.
Definition: (i) Specifies textual rules/non-functional requirements that are security constraints on resources, information and data (e.g. security-related in the form of rules (e.g. access control policy). A common way of representing access control policy is through the use of XACML (eXtensible Access Control Markup Language), it is expected that implementations of UAF allow users to link security constraints to external files represented in XACML. (ii) Identifies risks, specifies risk likelihood, impact, asset criticality, other measurements and enables risk assessment.
Recommended Implementation: tabular or Matrix format, SysML Block Definition Diagram, SysML Parametric Diagram, or OCL.

425.0.0 View Specifications::Dictionary

Commented [KG219]: UAF12-54

Stakeholders: Architects, users of the architecture, Capability Owners, Systems Engineers, Solution Providers.
Concerns: Definitions for all the elements in the architecture, libraries of environments and measurements.
Definition: Presents all the elements used in an architecture. Can be used specifically to capture:
a. elements and relationships that are involved in defining the environments applicable to capability, operational concept or set of systems.
b. measurable properties that can be used to support analysis such as KPIs, MoEs, TPIs etc.

View Specifications::Dictionary::Dictionary

Stakeholders: Solution Providers, Systems Engineers, Software Architects, Business Architects.
Concerns: provides a central reference for a given architecture's data and metadata. It enables the set of architecture description to stand alone, with minimal reference to outside resources.
Definition: contains definitions of terms used in the given architecture. It consists of textual definitions in the form of a glossary, their taxonomies, and their metadata (i.e., data about architecture data), including metadata for any custom-tailored views. Architects should use standard terms where possible (i.e., terms from existing, approved dictionaries, glossaries, and lexicons).
Recommended Implementation: text, table format.

425.0.12 View Specifications::Summary & Overview

Stakeholders: Executives, PMs, Enterprise Architects.
Concerns: executive-level summary information in a consistent form.
Definition: provides executive-level summary information in a consistent form that allows quick reference and

comparison between architectural descriptions. Includes assumptions, constraints, and limitations that may affect high-level decisions relating to an architecture-based work programme.

View Specifications::Summary & Overview::Summary & Overview

Stakeholders: Decision makers, Solution Providers, Systems Engineers, Software Architects, Business Architects.
Concerns: quick overview of an architecture description and summary of analysis. In the initial phases of architecture development, it serves as a planning guide. Upon completion of an architecture, it provides a summary of findings, and any conducted analysis.
Definition: provides executive-level summary information in a consistent form that allows quick reference and comparison among architectures. The Summary and Overview includes assumptions, constraints, and limitations that may affect high-level decision processes involving the architecture.
Recommended Implementation: text, free form diagram, table format.

View Specifications::Other::IEPPV

Stakeholders: Data Modelers, Solution Providers, Systems Engineers, Software Engineers, Systems Architects, Business Architects, information architects.
Concerns: information exchanges, information interfaces, information interoperability, information sharing and safeguarding.

Definition: UAFP supports information modeling and traceability to IEPPV model elements using the IEPPV-defined elements: Message, SemanticElement, and FilteredSemanticElement, used to represent data, properties/attributes, structure, format, and relationships. The IEPPV profile enables the specification of the policies, rules and constraints governing the packaging (assembly, transformation, marking, redaction) of data elements conforming to information sharing and safeguarding requirements. The IEPPV profile also governs the processing (parsing, transformation, and marshalling) received information and data element.
Recommended Implementation: UML Class Diagram, SysML Block Diagram.

View Specifications::Other::NIEM

Stakeholders: Data Modelers, Solution Providers, Systems Engineers, Software Engineers, Systems Architects, Business Architects.
Concerns: information exchanges, information interoperability, data schema.
Definition: A specification representing the structure, semantics, and relationships of data objects that satisfy an information exchange requirement. Used for organizing and packaging Model Package Descriptions (MPDs) and Information Exchange Package Documentation (IEPD) as defined by the National Information Exchange Model (NIEM). An IEPD is a type of MPD. The NIEM MPD defines an Enterprise Information Exchange Model (EIEM) as an MPD that contains NIEM-conforming schemas that define and declare data components to be consistently reused in the IEPDs of an enterprise. An EIEM is a collection of schemas organized into a collection of subset schemas and one or more extension schemas. An information sharing enterprise creates and maintains an EIEM.
Recommended Implementation: UML Class Diagram, SysML Block Diagram.

ArchitecturalDescription

Package: Summary & Overview

isAbstract: No

Generalization: MeasurableElement
Description

An Architecture Description is a work product used to express the Architecture of some System Of Interest.
It provides executive-level summary information about the architecture description in a consistent form to allow quick reference and comparison between architecture descriptions -- It includes assumptions, constraints, and limitations that may affect high-level decisions relating to an architecture-based work program.

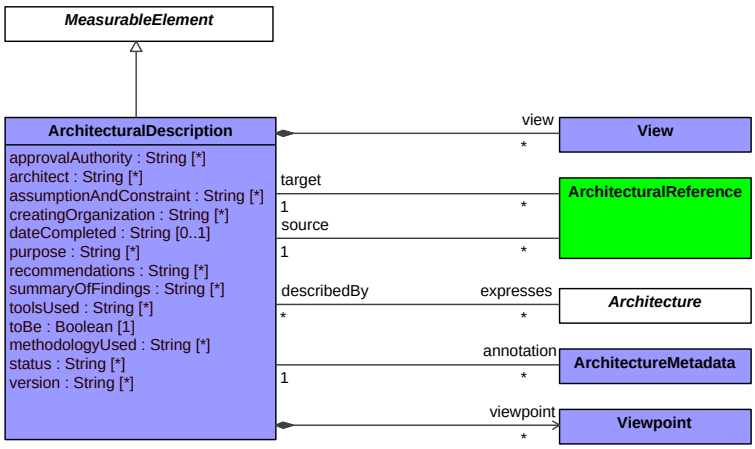

Figure 9:209 - ArchitecturalDescription
Attributes

approvalAuthority : String[*]	Someone or something that has the authority to approve the ArchitecturalDescription.
architect : String[*]	Someone responsible for the creation of ArchitecturalDescription.
assumptionAndConstraint : String[*]	Any assumptions, constraints, and limitations contained in the ArchitecturalDescription, including those affecting deployment, communications performance, information assurance environments, etc.
creatingOrganization : String[*]	The organization responsible for creating the ArchitecturalDescription.
dateCompleted : String[0..1]	Date that the ArchitecturalDescription was completed.
methodologyUsed : String[*]	Name of the documented methodology that will be or has been used in describing the architecture~~The methodology used in developing the architecture.~~
purpose : String[*]	Explains the need for the Architecture, what it will demonstrate, the types of analyses that will be applied to it, who is expected to perform the analyses, what decisions are expected to be made on the basis of each form of analysis, who is expected to make those decisions, and what actions are expected to result.
recommendations : String[*]	States the recommendations that have been developed based on the architecture effort. Examples include recommended system implementations, and opportunities for technology insertion.
status : String[*]	State of the architecture description in terms of its development, baselining, activity (e.g., active or inactive), or some other factor of importance.~~Approval status of the architecture.~~
summaryOfFindings : String[*]	Summarizes the findings that have been developed so far. This may be updated several times during the development of the ArchitecturalDescription.
toBe : Boolean[1]	Indicates whether the ArchitecturalDescription represents an Architecture that exists or will exist in the future.
toolsUsed : String[*]	Identifies any tools used to develop the ArchitecturalDescription as well as file names and formats if appropriate.
version : String[*]	Identifier that indicates the particular edition or revision of the architecture description.~~Version number of the architecture.~~

~~15.1.4~~9.1.4 Domain MetaModel::Operational

Domain MetaModel::Operational::Taxonomy

ArbitraryConnector

Package: Taxonomy

isAbstract: No

Generalization: MeasurableElement

Description

Represents a visual indication of a connection used in high level operational concept diagrams.

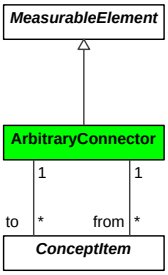

Figure 9:51 - ArbitraryConnector

ConceptItem

Package: Taxonomy

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type which represents some part played by an asset or location in a HighLevelOperationalConcept~~Abstract, an item which may feature in a HighLevelOperationalConcept~~.

Commented [AM366]: UAF12-58

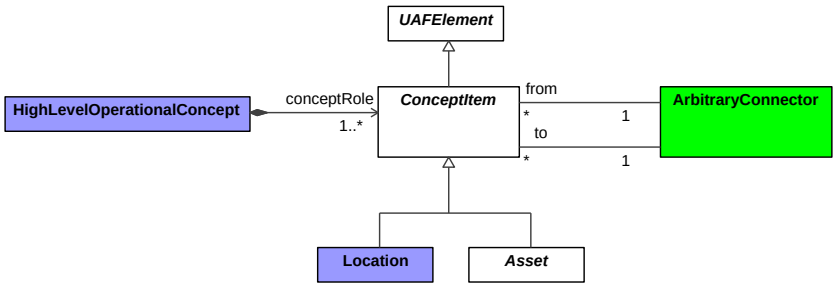

Figure 9:52 - ConceptItem

HighLevelOperationalConcept

Package: Taxonomy

isAbstract: No

Generalization: PropertySet

Description

Describes the Resources and Locations required to meet an operational scenario from an integrated systems point of view. It is used to communicate overall quantitative and qualitative system characteristics to stakeholders.

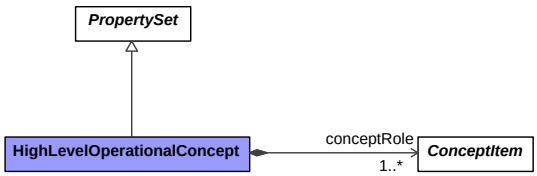

Figure 9:53 - HighLevelOperationalConcept

Domain MetaModel::Operational::Structure

KnownResource

Package: Structure

isAbstract: No

Generalization: OperationalPerformer, ResourcePerformer

Description

Asserts that a known ResourcePerformer constrains the implementation of the OperationalPerformer that plays the role in the OperationalArchitecture.

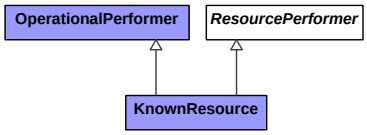

Figure 9:54 - KnownResource

OperationalAgent

Package: Structure

isAbstract: Yes

Generalization: SubjectOfOperationalConstraint, CapableElement, OperationalAsset, Desirer

Description

An abstract type grouping OperationalArchitecture and OperationalPerformer.

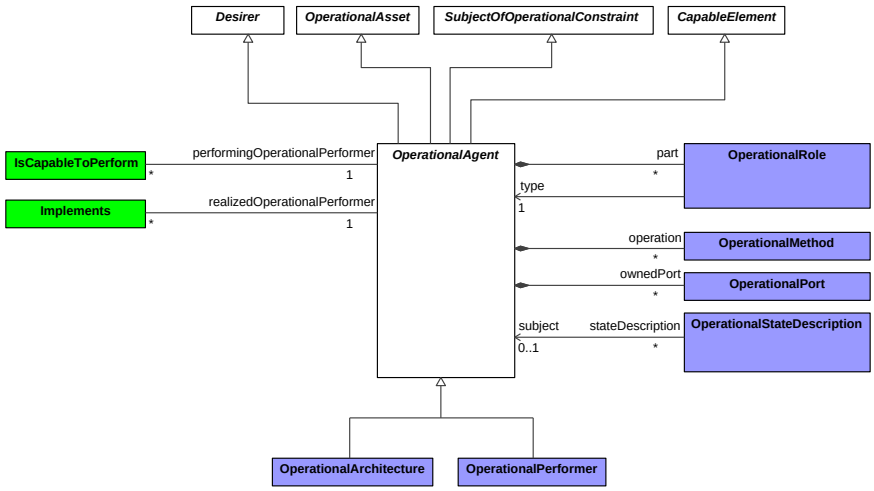

Figure 9:55 - OperationalAgent

OperationalArchitecture

Package: Structure

isAbstract: No

Generalization: OperationalAgent, Architecture

Description

A type used to denote a model of the Architecture, described from the Operational perspective.

Commented [KG367]: UAF12-15

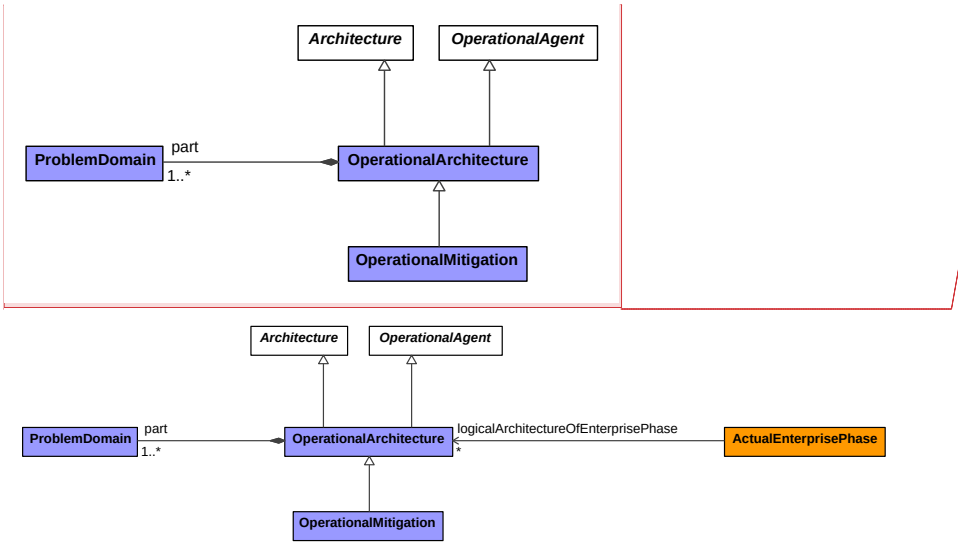

Figure 9:56 - OperationalArchitecture

OperationalMethod

Package: Structure

isAbstract: No

Generalization: ProcessOperation

Description

A behavioral feature of an OperationalAgent whose behavior is specified in an OperationalActivity.

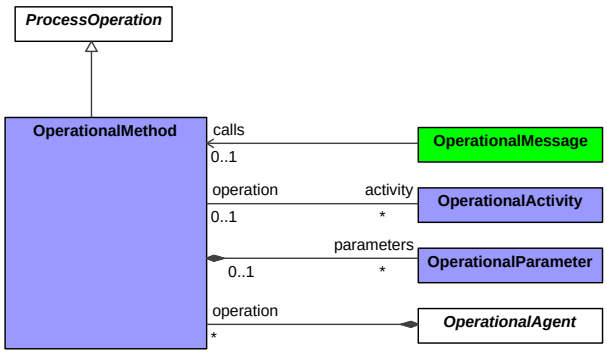

Figure 9:57 - OperationalMethod

OperationalParameter

Package: Structure

isAbstract: No

Generalization: ProcessParameter

Description

A type that represents inputs and outputs of an OperationalActivity. It is typed by an OperationalExchangeItem.

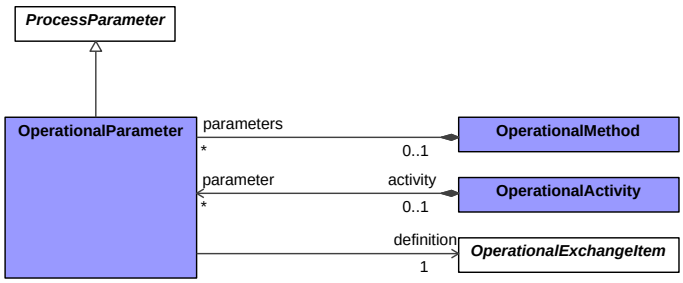

Figure 9:58 - OperationalParameter

OperationalPerformer

Package: Structure

isAbstract: No

Generalization: OperationalAgent

Description

A logical entity that IsCapableToPerform OperationalActivities which produce, consume and process Resources.

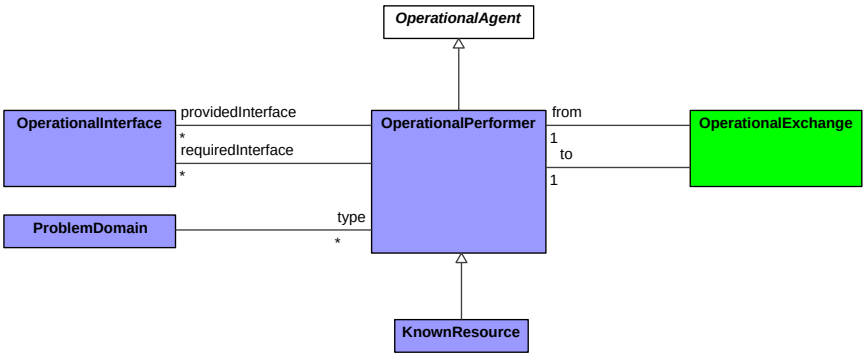

Figure 9:59 - OperationalPerformer

OperationalRole

Package: Structure

isAbstract: No

Generalization: LocationHolder, AssetRole, InteractionRole

Description

Usage of a OperationalPerformer or OperationalArchitecture in the context of another OperationalPerformer or OperationalArchitecture. Creates a whole-part relationship.

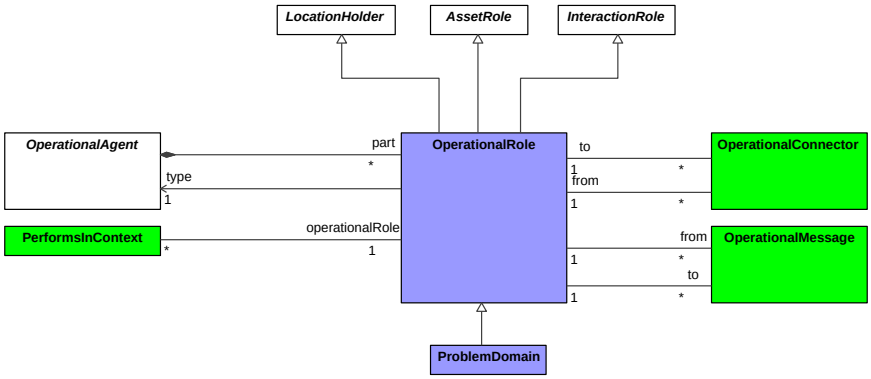

Figure 9:60 - OperationalRole

ProblemDomain

Package: Structure

isAbstract: No

Generalization: OperationalRole

Description

A property associated with an OperationalArchitecture, used to specify the scope of the problem.

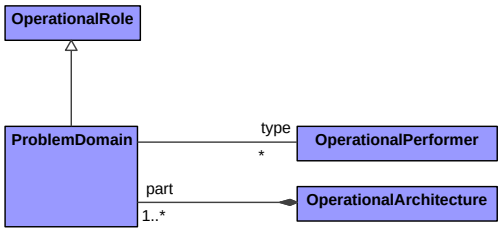

Figure 9:61 - ProblemDomain

Domain MetaModel::Operational::Connectivity

OperationalConnector

Package: Connectivity

isAbstract: No

Generalization: AssetRole~~MeasurableElement~~

Commented [KG368]: UAF12-51

Description

A Connector that goes between OperationalRoles representing a need to exchange Resources. It can carry a number of OperationalExchanges.

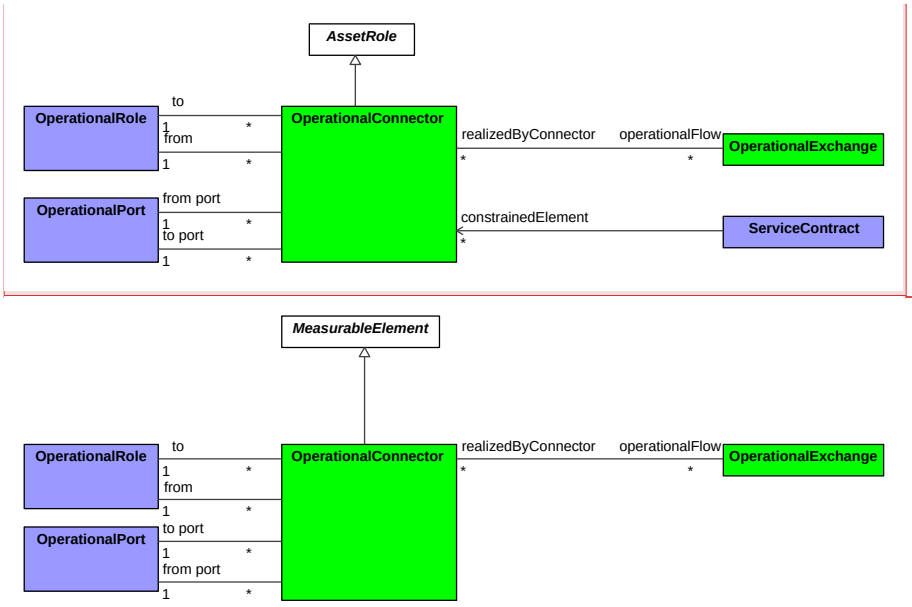

Figure 9:62 - OperationalConnector

OperationalExchange

Package: Connectivity

isAbstract: No

Generalization: Exchange, SubjectOfOperationalConstraint

Description

Asserts that a flow can exist between OperationalPerformers (i.e. flows of information, people, materiel, or energy).

Commented [KG369]: UAF12-51
UAF12-33

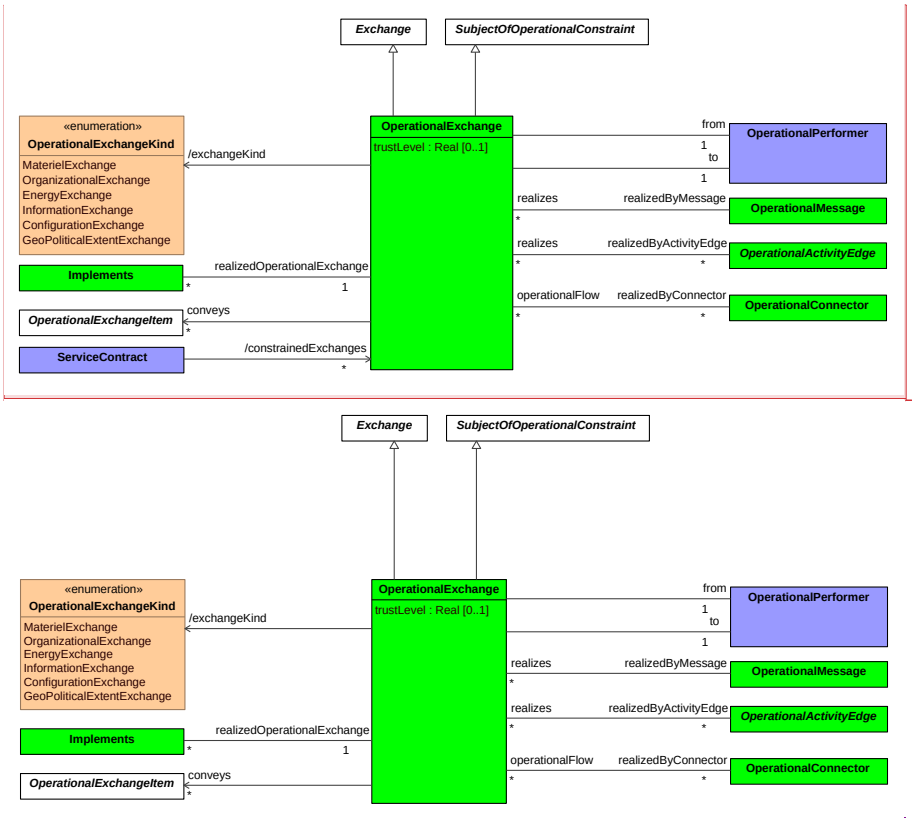

Figure 9:63 - OperationalExchange

Attributes

trustLevel :	Real[0..1]	Captures the directional arbitrary level of trust related to an OperationalExchange between two OperationalPerformers.

OperationalExchangeItem

Package: Connectivity

isAbstract: Yes

Generalization: Resource, SubjectOfSecurityConstraint, ExchangeItem

Description

An abstract grouping for elements that defines the types of elements that can be exchanged between OperationalPerformers and conveyed by an OperationalExchange.

Commented [KG370]: UAF12-33

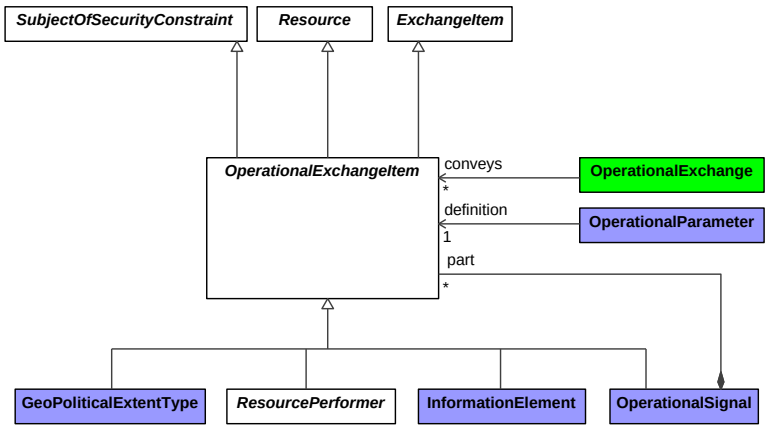

Figure 9:64 - OperationalExchangeItem

OperationalInterface

Package: Connectivity

isAbstract: No

Generalization: PropertySet

Description

A declaration that specifies a contract between the OperationalPerformer it is related to, and any other OperationalPerformers it can interact with.

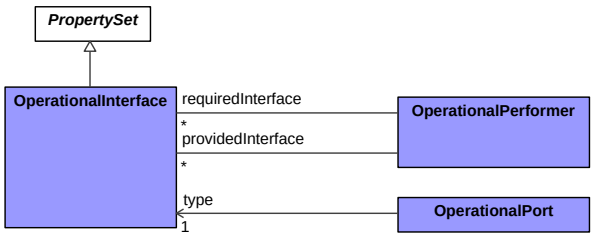

Figure 9:65 - OperationalInterface

OperationalPort

Package: Connectivity

isAbstract: No

Generalization: MeasurableElement

Description

An interaction point for an OperationalAgent through which it can interact with the outside environment and which is defined by an OperationalInterface.

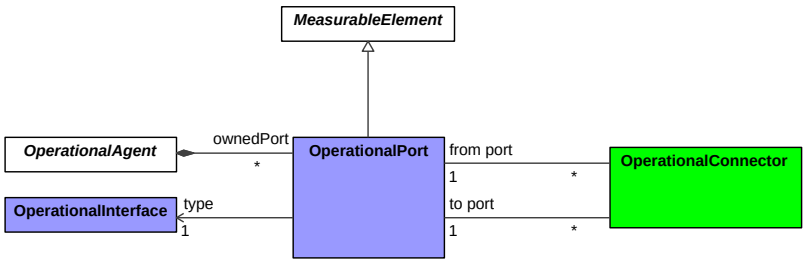

Figure 9:66 - OperationalPort

OperationalSignal

Package: Connectivity

isAbstract: No

Generalization: SubjectOfOperationalConstraint, OperationalExchangeItem

Description

An item of information that flows between OperationalPerformers and is produced and consumed by the OperationalActivities that the OperationalPerformers are capable of performing (see IsCapableToPerform).

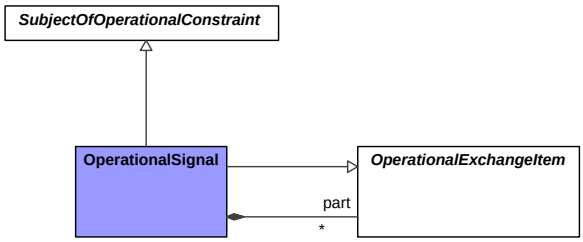

Figure 9:67 - OperationalSignal

Domain MetaModel::Operational::Processes

OperationalActivity

Package: Processes

isAbstract: No

Generalization: SubjectOfOperationalConstraint, Process

Description

An Activity that captures a logical process, specified independently of how the process is carried out.

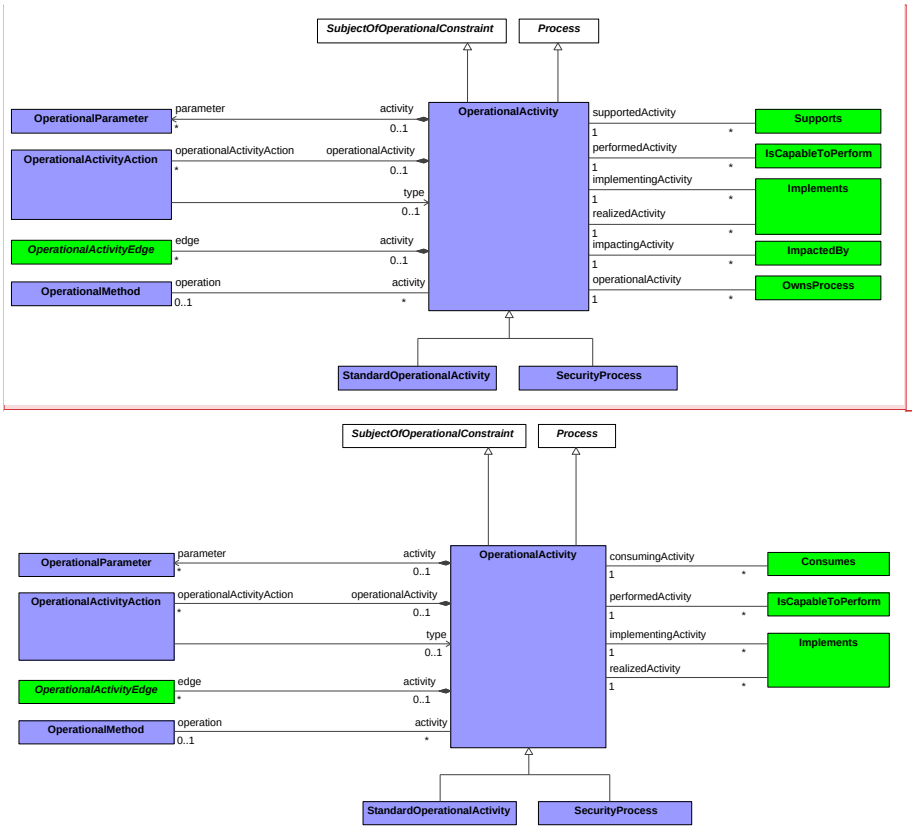

Figure 9:68 - OperationalActivity

OperationalActivityAction

Package: Processes

isAbstract: No

Generalization: ProcessUsage

Description

A call of an OperationalActivity in the context of another OperationalActivity.

Commented [KG371]: UAF12-33
UAF12-50

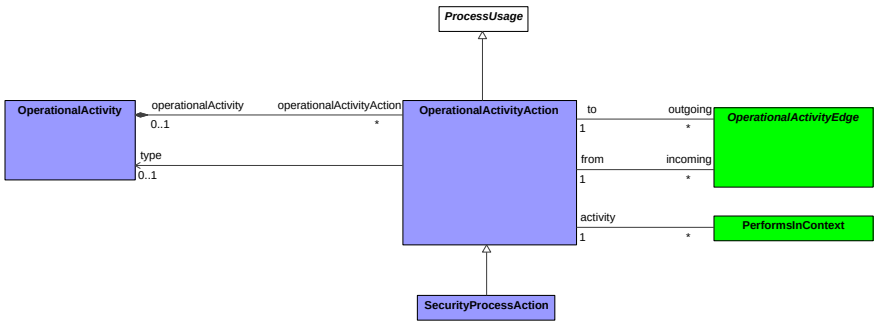

Figure 9:69 - OperationalActivityAction

OperationalActivityEdge

Package: Processes

isAbstract: Yes

Generalization: ProcessEdge

Description

A tuple that shows the flow of Resources (objects/information) between OperationalActivityActions.

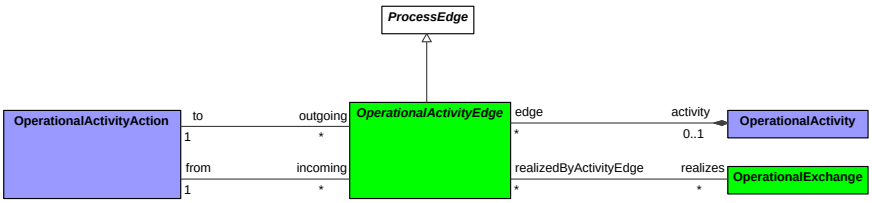

Figure 9:70 - OperationalActivityEdge

StandardOperationalActivity

Package: Processes

isAbstract: No

Generalization: OperationalActivity

Description

A sub-type of OperationalActivity that is a standard operating procedure.

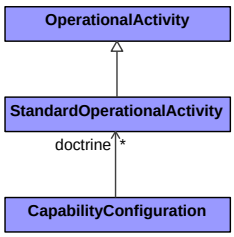

Figure 9:71 - StandardOperationalActivity

Domain MetaModel::Operational::States

OperationalStateDescription

Package: States

isAbstract: No

Generalization: MeasurableElement, StateDescription

Description

A state machine describing the behavior of a OperationalPerformer, depicting how the OperationalPerformer responds to various events and the actions.

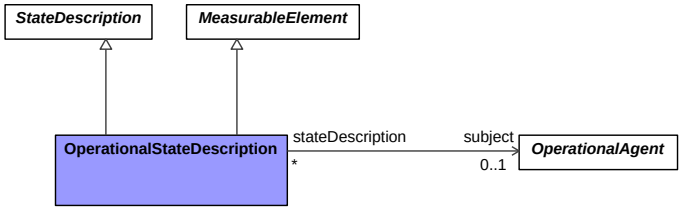

Figure 9:72 - OperationalStateDescription

Domain MetaModel::Operational:: Sequences ~~Interaction Scenarios~~

Commented [KG372]: UAF12-59

OperationalInteractionScenario

Package: Sequences ~~Interaction~~ ~~Scenarios~~

Commented [KG373]: UAF12-59

isAbstract: No

Generalization: InteractionScenario

Description

A specification of the interactions between OperationalPerformers in an OperationalArchitecture.

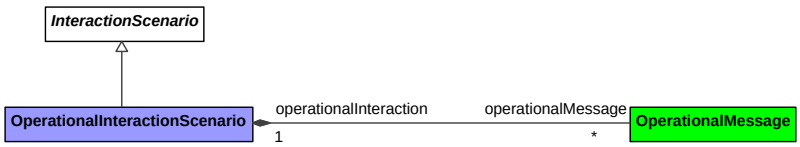

Figure 9:73 - OperationalInteractionScenario

OperationalMessage

Package: Interaction Scenarios

isAbstract: No

Generalization: InteractionMessage

Description

Message for use in an OperationalInteractionScenario which carries any of the subtypes of OperationalExchange.

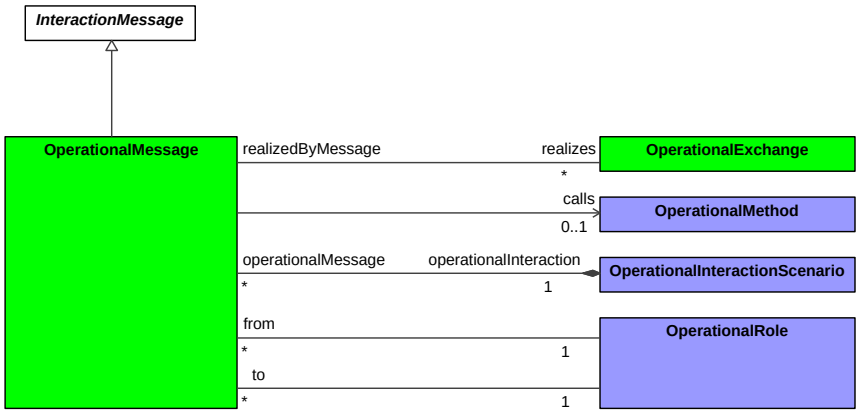

Figure 9:74 - OperationalMessage

Domain MetaModel::Operational::Information

~~OperationalInformation~~~~InformationElement~~

Package: Information

isAbstract: No

Generalization: SubjectOfOperationalConstraint, OperationalAsset, OperationalExchangeItem, ServiceExchangeItem

Description

An item of information that flows between OperationalPerformers and is produced and consumed by the OperationalActivities that the OperationalPerformers are capable to perform (see IsCapableToPerform).

Commented [KG374]: UAF12-33

Formatted: OMG Normal Paragraph, Indent: Left: 0", First line: 0", Space After: 0 pt

Commented [KG375]: UAF12-33

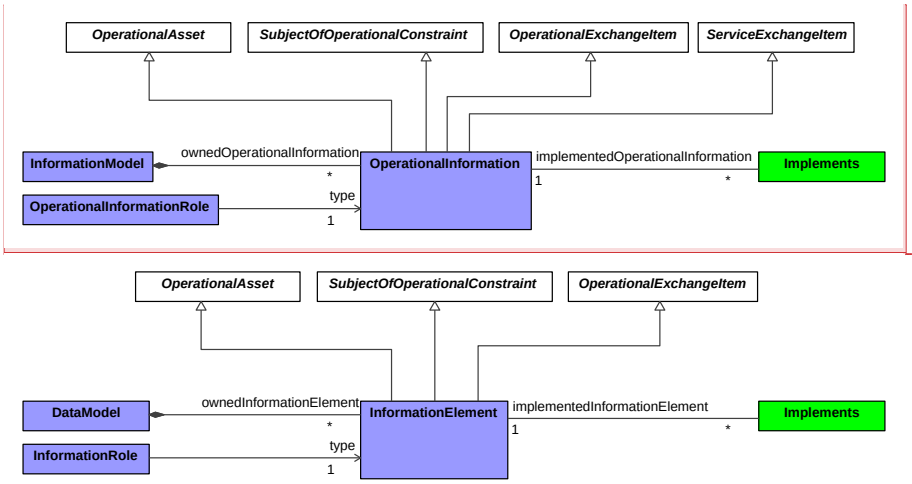

Figure 9:75 - InformationElement

Domain MetaModel::Operational::Constraints

OperationalConstraint

Package: Constraints

isAbstract: No

Generalization: Rule

Description

A Rule governing an operational architecture element i.e. OperationalPerformer, OperationalActivity, OperationalInformation ~~InformationElement~~ etc.

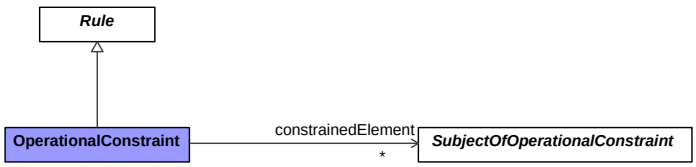

Figure 9:76 - OperationalConstraint

SubjectOfOperationalConstraint

Package: Constraints

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type grouping elements that can be the subject of an OperationalConstraint.

Commented [KG376]: UAF12-33

Commented [KG377]: UAF12-33

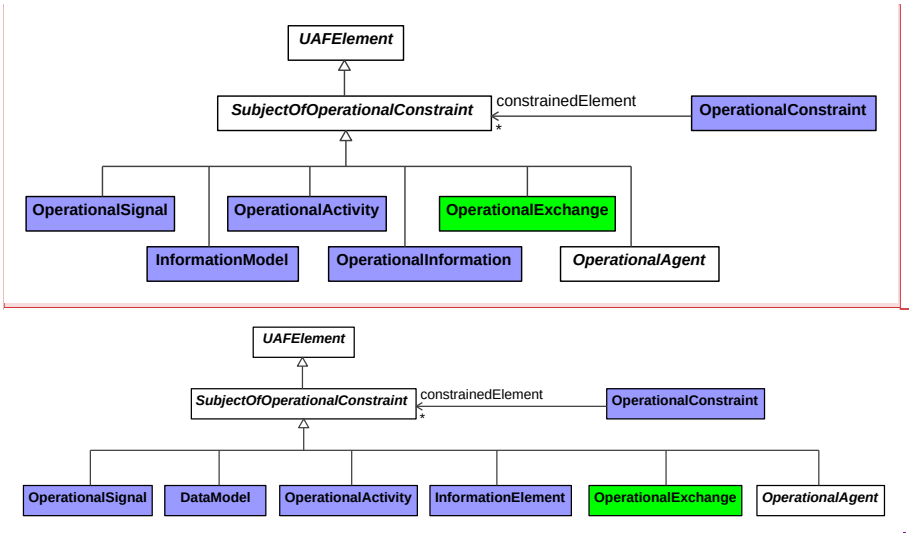

Figure 9:77 - SubjectOfOperationalConstraint

~~15.1.5~~9.1.5 Domain MetaModel::Services

Stakeholders: Enterprise Architects, Solution Providers, Systems Engineers, Software Architects, Business Architects..

Concerns: specifications of services required to exhibit a Capability.

Definition: shows Service~~s Specifications~~ and required and provided service levels of these specifications required to exhibit a Capability or to support an Operational Activity.

Domain MetaModel::Services::Taxonomy

Service~~Specification~~

Package: Taxonomy

isAbstract: No

Generalization: PropertySet, VersionedElement, CapableElement, Asset

Description

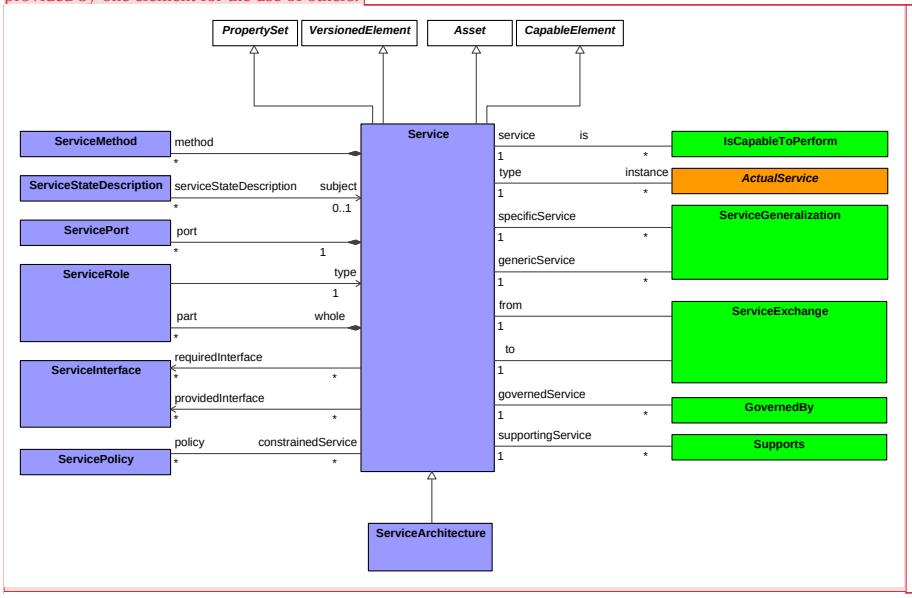
Commented [KG378]: UAF12-33

Commented [KG379]: UAF12-33

Commented [KG380]: UAF12-33

Commented [KG381]: UAF12-51

A mechanism to enable access to one or more capabilities, where the access is provided using a prescribed service interface and is exercised consistent with service constraints and policies.~~The specification of a set of functionality provided by one element for the use of others.~~



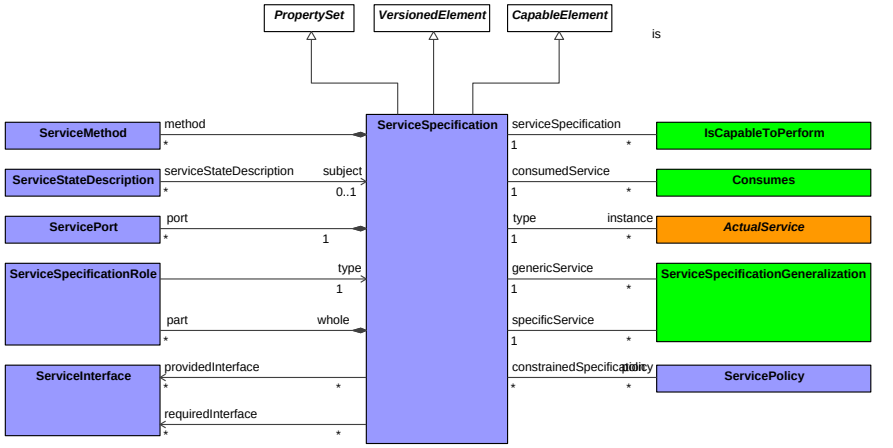


Figure 9:78 - ~~Service~~~~ServiceSpecification~~

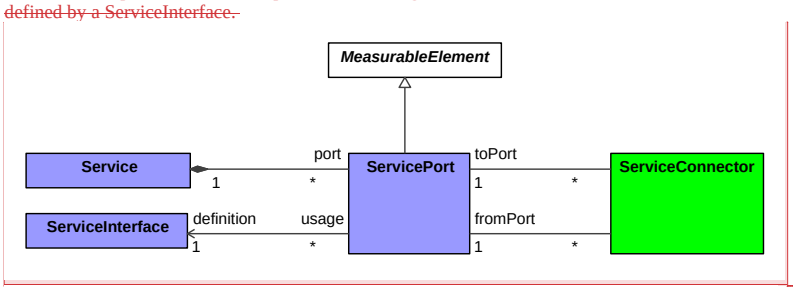

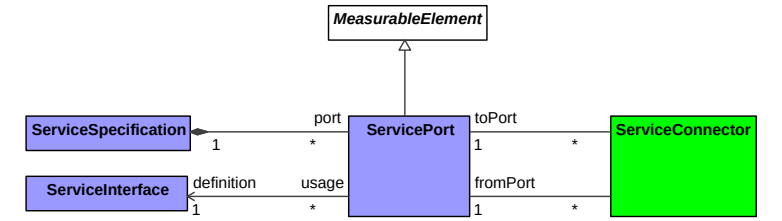

Figure 9:85 – ServicePort

ServiceSignal

Package: Connectivity

isAbstract: No

Generalization: ServiceExchangeItem

Description

A specification of a kind of communication between Services in which a reaction is asynchronously triggered in the receiver without a reply.

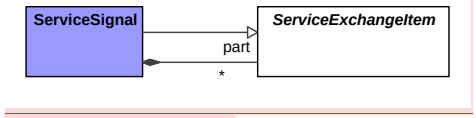

Figure 9:128 - ServiceSignal

ServiceSignalProperty

Package: Connectivity

isAbstract: No

Description

A property of a ServiceSignal typed by ServiceExchangeItem. It enables ServiceExchangeItem e.g. OperationalInformation to be passed as arguments of the ServiceSignal.

Commented [KG405]: UAF12-33

Formatted: Body Text

Domain MetaModel::Services::Processes

ServiceFunction

Package: Processes

isAbstract: No

Generalization: Process

Description

An Activity that describes the abstract behavior of Service~~ServiceSpecifications~~, regardless of the actual implementation.

Commented [KG406]: UAF12-33

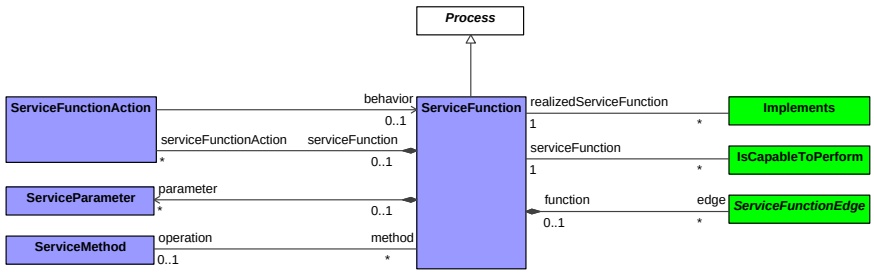

Figure 9:86 - ServiceFunction

ServiceFunctionAction

Package: Processes

isAbstract: No

Generalization: ProcessUsage

Description

A call of a ServiceFunction in the context of another ServiceFunction.

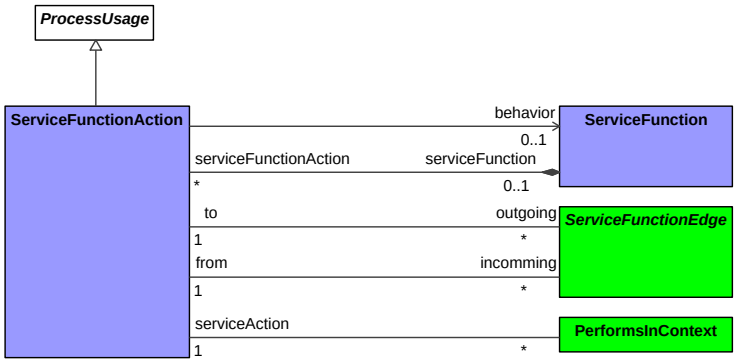

Figure 9:87 - ServiceFunctionAction

ServiceFunctionEdge

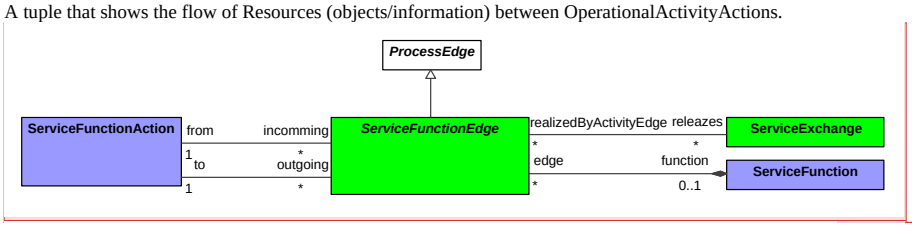
Package: Processes

isAbstract: Yes

Generalization: ProcessEdge

Description

A tuple that shows the flow of Resources (objects/information) between OperationalActivityActions.



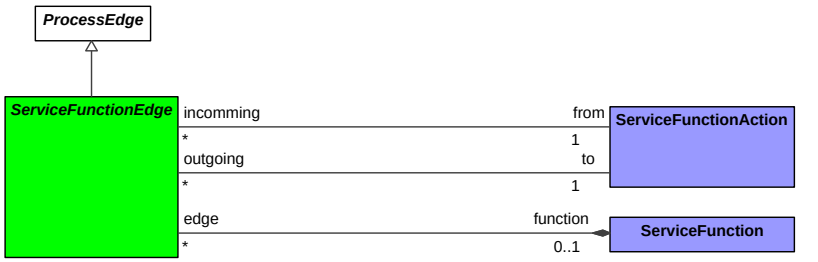


Figure 9:88 - ServiceFunctionEdge

Domain MetaModel::Services::States

ServiceStateDescription

Package: States

isAbstract: No

Generalization: MeasurableElement, StateDescription

Description

Message for use in a services interaction scenario which carries any of the subtypes of ServiceExchange~~Message for use in a Service Event Trace~~.

Commented [AM414]: UAF12-33

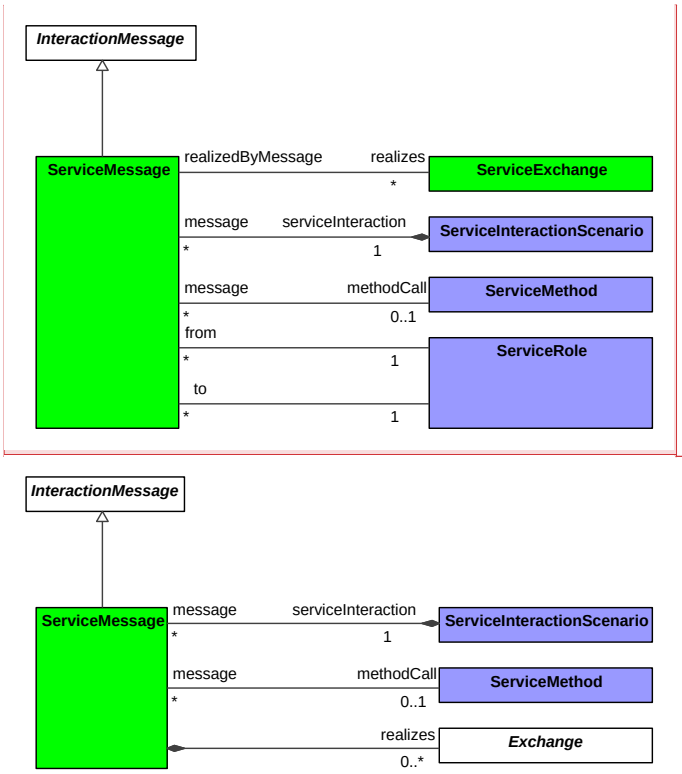

Figure 9:91 - ServiceMessage

Domain MetaModel::Services::Constraints

ServiceContract

Package: Constraints

isAbstract: No

Generalization: Rule

Description

A constraint governing the use of one or more Services.

Commented [KG415]: UAF12-33

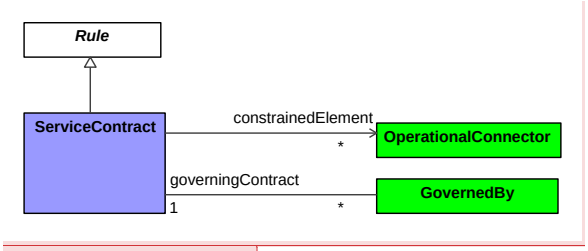

Figure 9:135 - ServiceContract

Commented [KG416]: UAF12-33

ServicePolicy

Package: Constraints

isAbstract: No

Generalization: Rule

Description

A constraint governing the use of one or more ServiceServiceSpecifications.

Commented [KG417]: UAF12-33

Commented [KG418]: UAF12-33

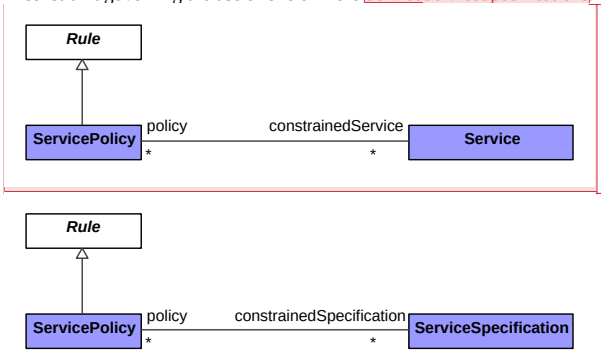

Figure 9:92 - ServicePolicy

Domain MetaModel::Services::Traceability

GovernedBy

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that exists between the ServiceContract and the Service that it governs.

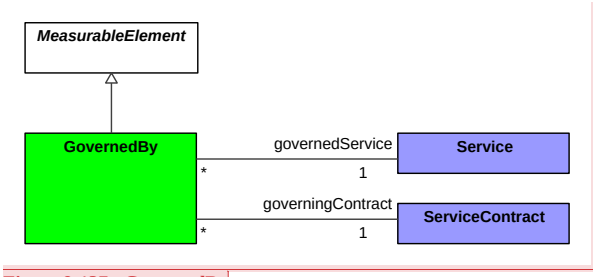

Figure 9:137 - GovernedBy

SupportsConsumes

Package: Traceability

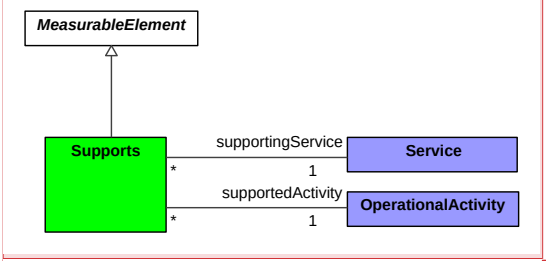
isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that asserts that a service in someway contributes or assists in the execution of an OperationalActivity

A tuple that asserts that an OperationalActivity make use of a service.



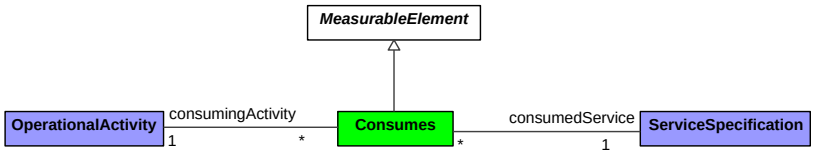


Figure 9:93 - Consumes

15.1.69.1.6 Domain MetaModel::Personnel

Stakeholders: Human resources, Solution Providers, PMs.
Concerns: human factors.
Definition: aims to clarify the role of Human Factors (HF) when creating architectures in order to facilitate both Human Factors Integration (HFI) and systems engineering (SE).

Commented [KG422]: UAF12-33

isAbstract: No

Generalization: OrganizationalResource

Description

A group of OrganizationalResources (Persons, Posts, Organizations and Responsibilities) associated for a particular purpose.

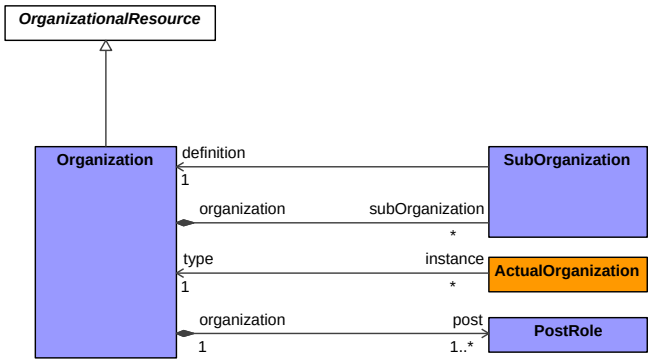

Figure 9:94 - Organization

OrganizationalResource

Package: Taxonomy

isAbstract: Yes

Generalization: PhysicalResource, Stakeholder

Description

An abstract type for Organization, Person, Post and Responsibility.

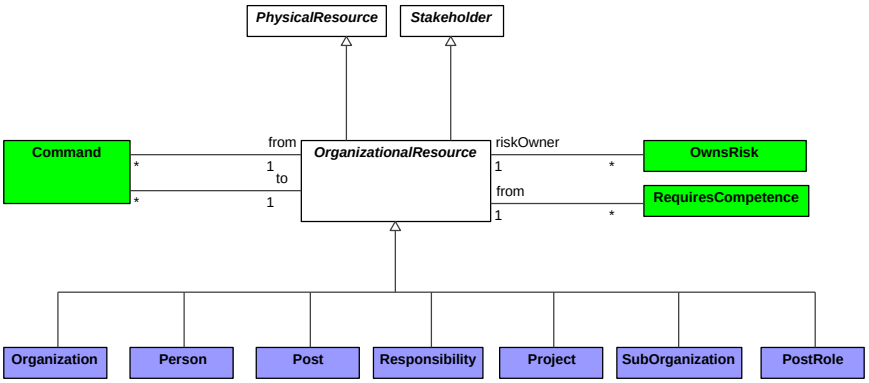

Figure 9:95 - OrganizationalResource

Person

Package: Taxonomy

isAbstract: No

Generalization: OrganizationalResource

Description

A type of a human being used to define the characteristics that need to be described for ActualPersons (e.g. properties such as address, telephone number, nationality, etc).

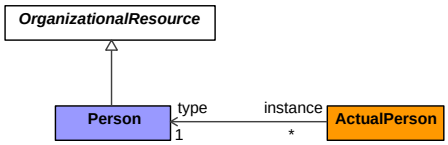

Figure 9:96 - Person

Post

Package: Taxonomy

isAbstract: No

Generalization: OrganizationalResource

Description

A type of job title or position that a person can fill (e.g. Lawyer, Solution Architect, Machine Operator or Chief Executive Officer).

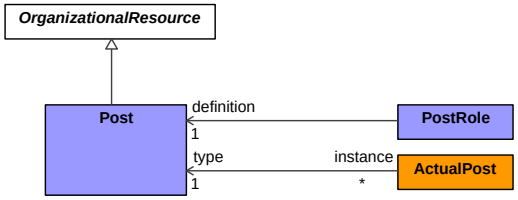

Figure 9:97 - Post

Responsibility

Package: Taxonomy

isAbstract: No

Generalization: OrganizationalResource

Description

The type of duty required of a Person or Organization.

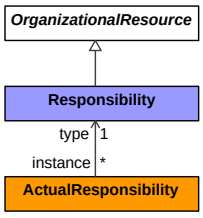

Figure 9:98 - Responsibility

Domain MetaModel::Personnel::Structure

PostRole

Package: Structure

isAbstract: No

Generalization: OrganizationalResource, ResourceRole

Description

A usage of a post in the context of another OrganizationalResource. Creates a whole-part relationship.

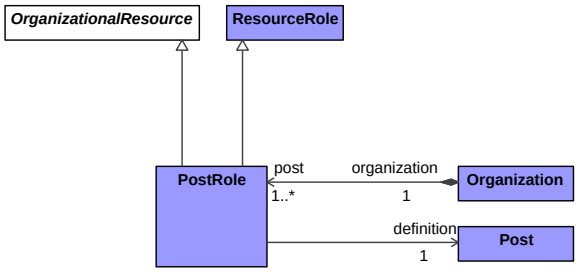

Figure 9:99 - PostRole

SubOrganization

Package: Structure

isAbstract: No

Generalization: OrganizationalResource, ResourceRole

Description

A type of a human being used to define the characteristics that need to be described for ActualPersons (e.g. properties such as address, telephone number, nationality, etc).

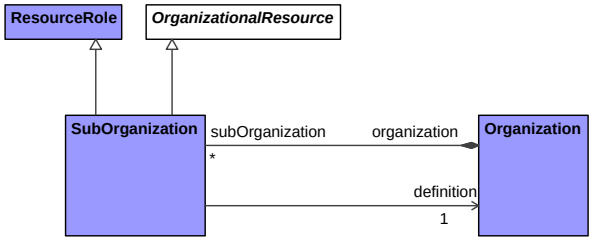

Figure 9:100 - SubOrganization

Domain MetaModel::Personnel::Connectivity

Command

Package: Connectivity

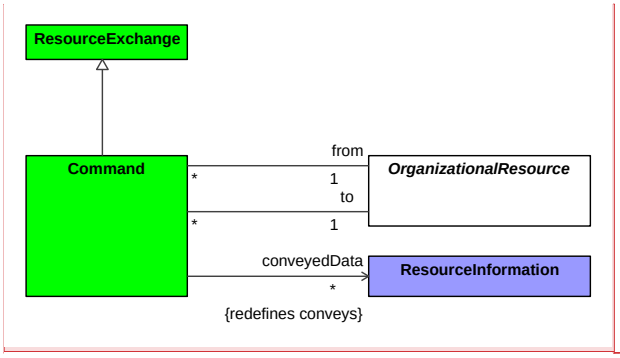
isAbstract: No

Generalization: ResourceExchange

Description

A type of ResourceExchange that asserts that one OrganizationalResource commands another.

Commented [KG423]: UAF12-33



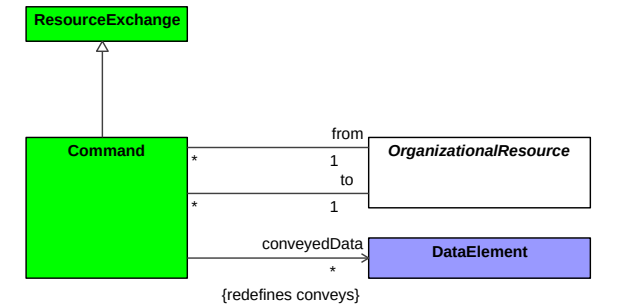


Figure 9:101 - Command

Control

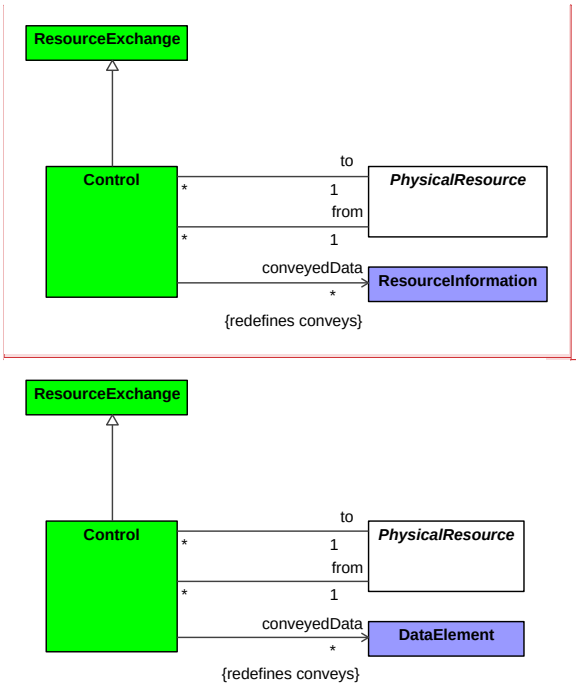
Package: Connectivity

isAbstract: No

Generalization: ResourceExchange

Description

A type of ResourceExchange that asserts that one PhysicalResource controls another PhysicalResource (i.e. the driver of a vehicle controlling the vehicle speed or direction).



Commented [KG424]: UAF12-33

Figure 9:102 - Control

Domain MetaModel::Personnel:: Sequences ~~Interaction Scenarios~~

ResourceInteractionScenario

Package: Sequences ~~Interaction~~ ~~Scenarios~~

Commented [KG426]: UAF12-59

isAbstract: No

Generalization: InteractionScenario

Description

A specification of the interactions between ResourcePerformers in a ResourceArchitecture.

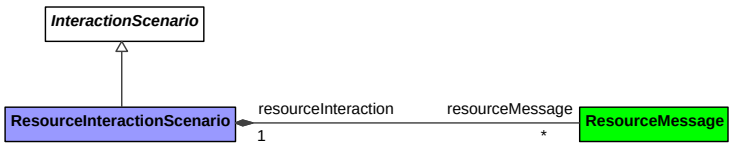

Figure 9:103 - ResourceInteractionScenario

Domain MetaModel::Personnel::Constraints

Competence

Package: Constraints

isAbstract: No

Generalization: PropertySet, SubjectOfForecast

Description

A specific set of abilities defined by knowledge, skills and aptitude.

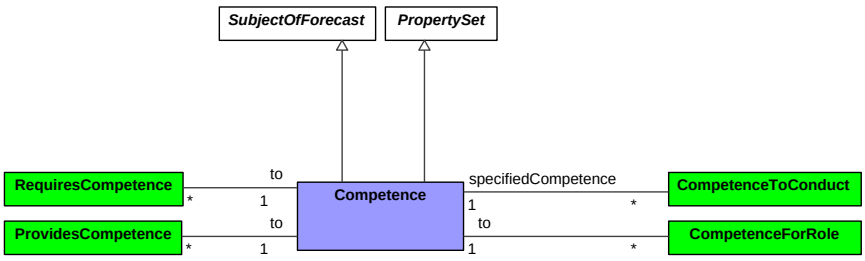

Figure 9:104 - Competence

CompetenceForRole

Package: Constraints

isAbstract: No

Generalization: MeasurableElement

Description

A tuple used to associate an organizational role with a specific set of required competencies.

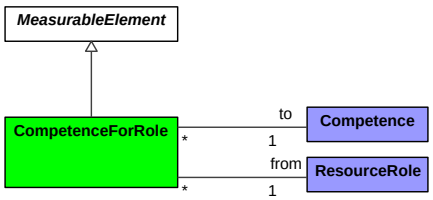

Figure 9:105 - CompetenceForRole

RequiresCompetence

Package: Constraints

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that an ActualOrganizationalResource is required to have a specific set of Competencies.

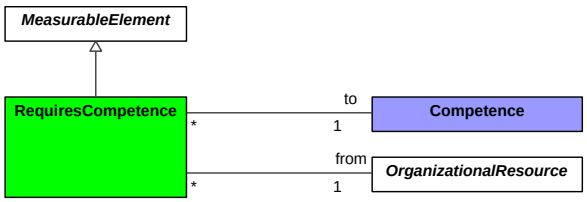

Figure 9:106 - RequiresCompetence

Domain MetaModel::Personnel::Roadmap

FillsPost

Package: Roadmap

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that an ActualPerson fills an ActualPost.

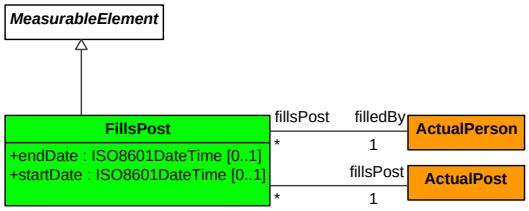

Figure 9:107 - FillsPost

Attributes

endDate :	ISO8601DateTime[0..1]	End date of an ActualPerson filling an ActualPost.
startDate :	ISO8601DateTime[0..1]	Start date of an ActualPerson filling an ActualPost.

Domain MetaModel::Personnel::Traceability

CompetenceToConduct

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple used to associate a Function with a specific set of Competencies needed to conduct the Function.

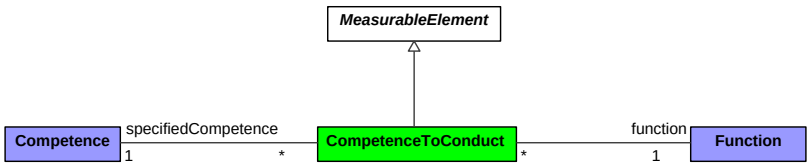

Figure 9:108 - CompetenceToConduct

~~15.1.7~~9.1.7 Domain MetaModel::Resources

Domain MetaModel::Resources::Taxonomy

CapabilityConfiguration

Package: Taxonomy

isAbstract: No

Generalization: ResourceArchitecture
Description

A composite structure representing the physical and human resources (and their interactions) in an enterprise, assembled to meet a capability.

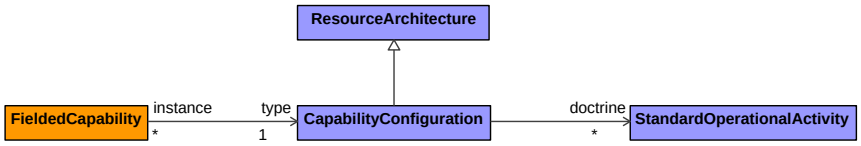

Figure 9:109 - CapabilityConfiguration

NaturalResource

Package: Taxonomy

isAbstract: No

Generalization: PhysicalResource
Description

Type of physical resource that occurs in nature such as oil, water, gas or coal.

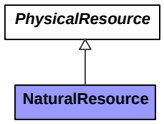

Figure 9:110 - NaturalResource

PhysicalResource

Package: Taxonomy

isAbstract: Yes

Generalization: ResourcePerformer
Description

An abstract type defining physical resources (i.e. OrganizationalResource, ResourceArtifact and NaturalResource).

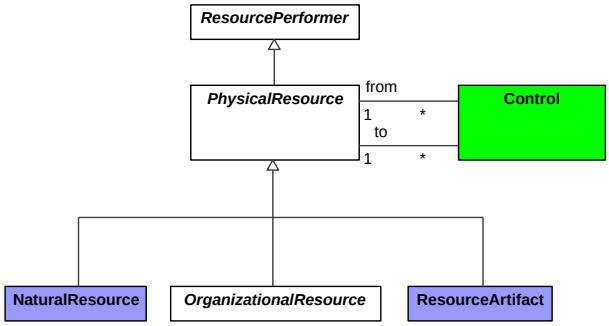

Figure 9:111 - PhysicalResource

ResourceArchitecture

Package: Taxonomy

isAbstract: No

Generalization: ResourcePerformer, Architecture

Description

A type used to denote a model of the Architecture, described from the ResourcePerformer perspective.

Commented [KG427]: UAF12-15

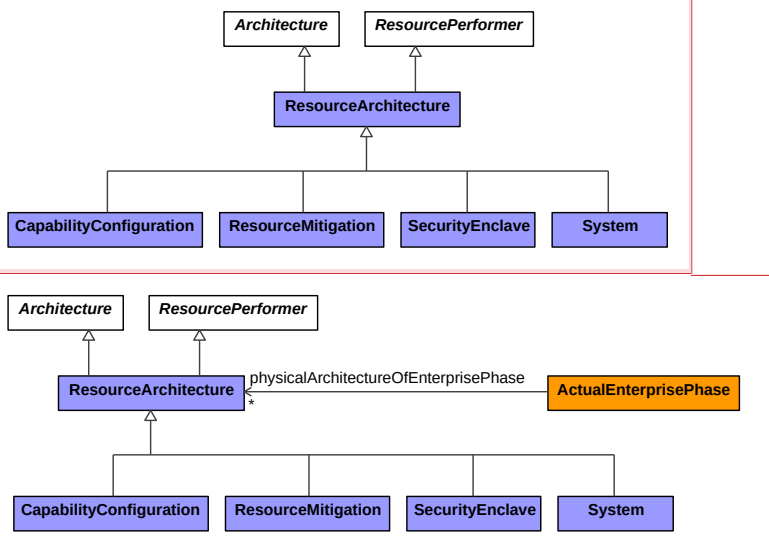

Figure 9:112 - ResourceArchitecture

ResourceArtifact

Package: Taxonomy

isAbstract: No

Generalization: PhysicalResource

Description

A type of man-made object that contains no human beings (i.e. satellite, radio, petrol, gasoline, etc.).

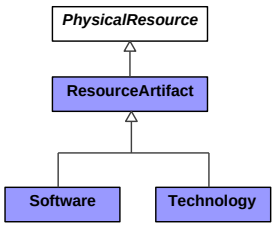

Figure 9:113 - ResourceArtifact

ResourcePerformer

Package: Taxonomy

isAbstract: Yes

Generalization: ResourceExchangeItem, SubjectOfResourceConstraint, OperationalExchangeItem, SubjectOfForecast, CapableElement, Desirer, VersionedElement, ResourceAsset, ServiceExchangeItem, StrategicExchangeItem

Commented [KG428]: UAF12-33

Description

An abstract grouping of elements that can perform Functions.

Figure 9:114 - ResourcePerformer

Attributes

isStandardConfiguration : Boolean[] Indicates if the ResourcePerformer is StandardConfiguration, default=false.

ResourceService

Package: Taxonomy

isAbstract: No

Generalization: ResourcePerformer

Description

A services that a ResourcePerformer provides to support higher level Services or OperationalActivities. Employee provisioning, backup and recovery, storage, self-service help desk are examples of ResourceServices.

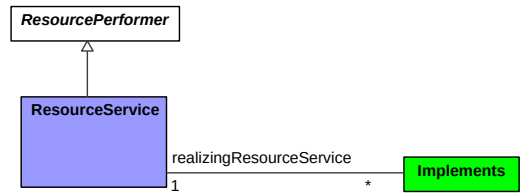

Figure 9:115 - ResourceService

Commented [KG430]: UAF12-33

Software

Package: Taxonomy

isAbstract: No

Generalization: ResourceArtifact

Description

A sub-type of ResourceArtifact that specifies an executable computer program.

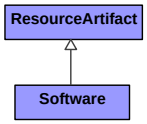

Figure 9:115 - Software

System

Package: Taxonomy

isAbstract: No

Generalization: ResourceArchitecture

Description

An integrated set of elements, subsystems, or assemblies that accomplish a defined objective. These elements include products (hardware, software, firmware), processes, people, information, techniques, facilities, services, and other support elements (INCOSE SE Handbook V4, 2015).

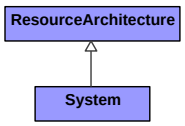

Figure 9:116 - System

Domain MetaModel::Resources::Structure

ResourceMethod

Package: Structure

isAbstract: No

Generalization: ProcessOperation

Description

A behavioral feature of a ResourcePerformer whose behavior is specified in a Function.

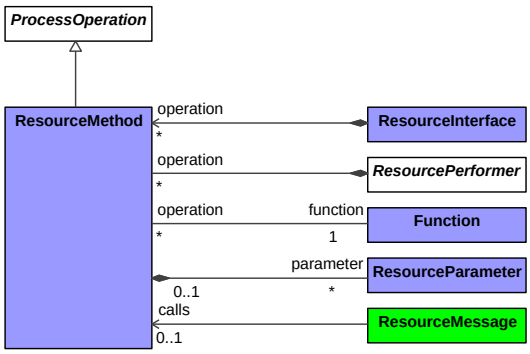

Figure 9:117 - ResourceMethod

ResourceParameter

Package: Structure

isAbstract: No

Generalization: ProcessParameter

Description

A type that represents inputs and outputs of an Function. It is typed by a ResourceInteractionItem.

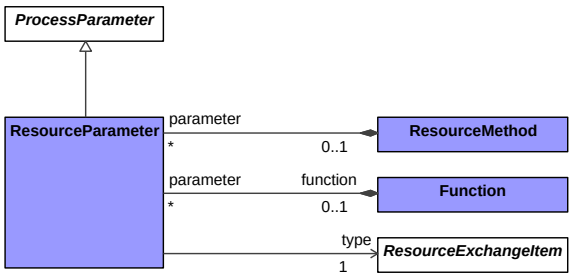

Figure 9:118 - ResourceParameter

ResourcePort

Package: Structure

isAbstract: No

Generalization: ProtocolImplementation, MeasurableElement

Description

An interaction point for a ResourcePerformer through which it can interact with the outside environment and which is defined by a ResourceInterface.

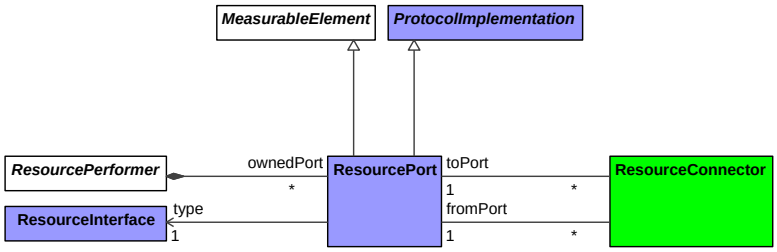

Figure 9:119 - ResourcePort

ResourceRole

Package: Structure

isAbstract: No

Generalization: SubjectOfResourceConstraint, LocationHolder, AssetRole, InteractionRole

Description

Usage of a ResourcePerformer in the context of another ResourcePerformer. Creates a whole-part relationship.

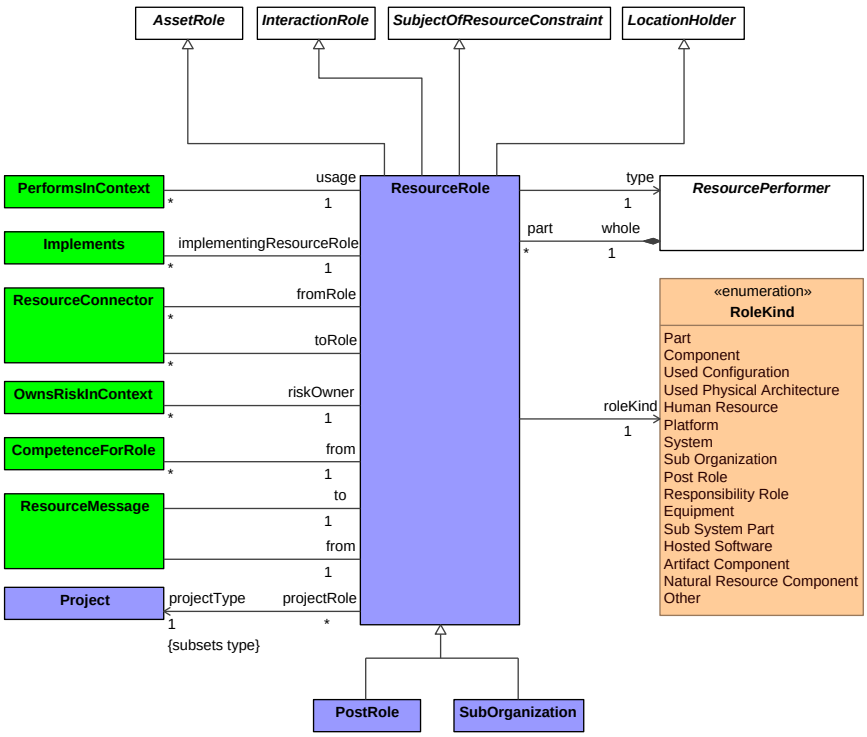

Figure 9:120 - ResourceRole

Domain MetaModel::Resources::Connectivity

ResourceConnector

Package: Connectivity

isAbstract: No

Generalization: ProtocolImplementation, AssetRole~~MeasurableElement~~

Commented [KG431]: UAF12-51

Description

A channel for exchange between two ResourceRoles.

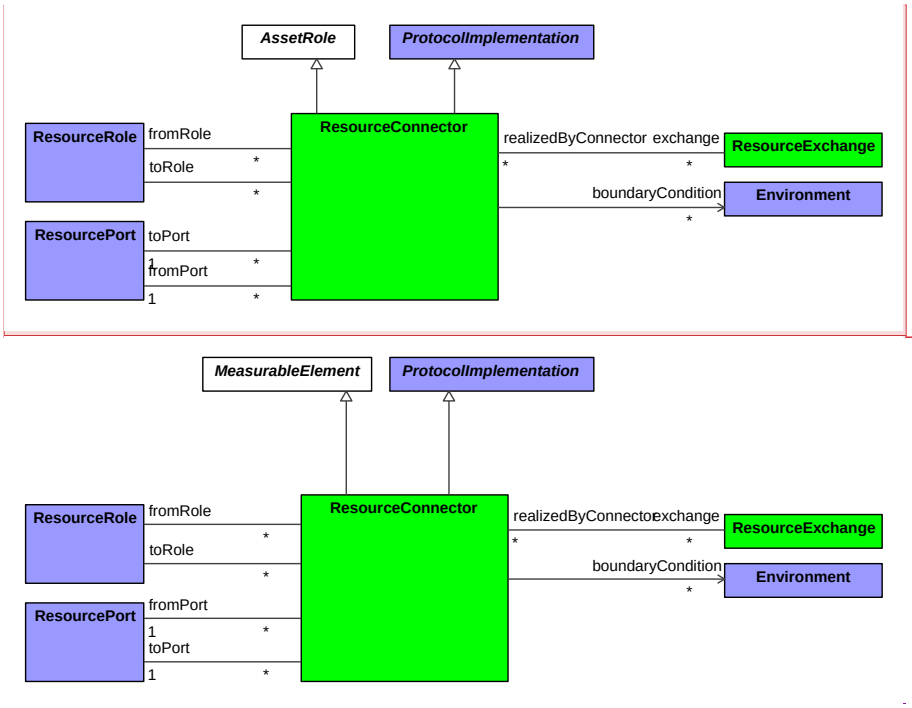

Figure 9:121 - ResourceConnector

ResourceExchange

Package: Connectivity

isAbstract: No

Generalization: Exchange

Description

Asserts that a flow can exist between ResourcePerformers (i.e. flows of data, people, material, or energy).

Commented [KG432]: UAF12-51

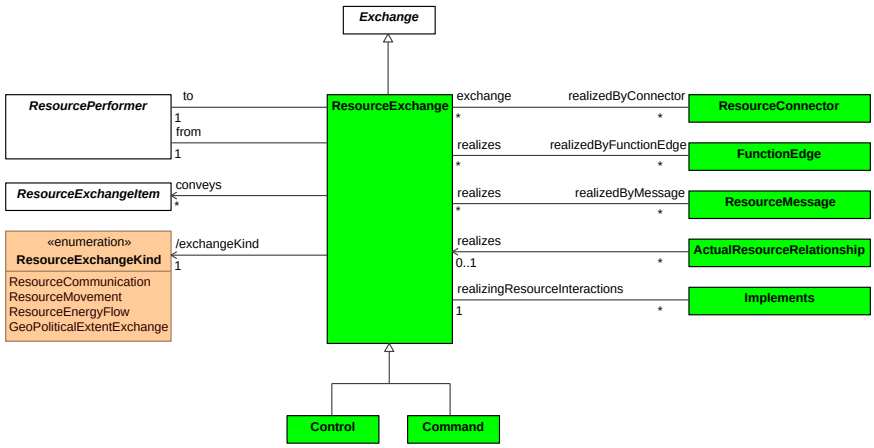

Figure 9:122 - ResourceExchange

ResourceExchangeItem

Package: Connectivity

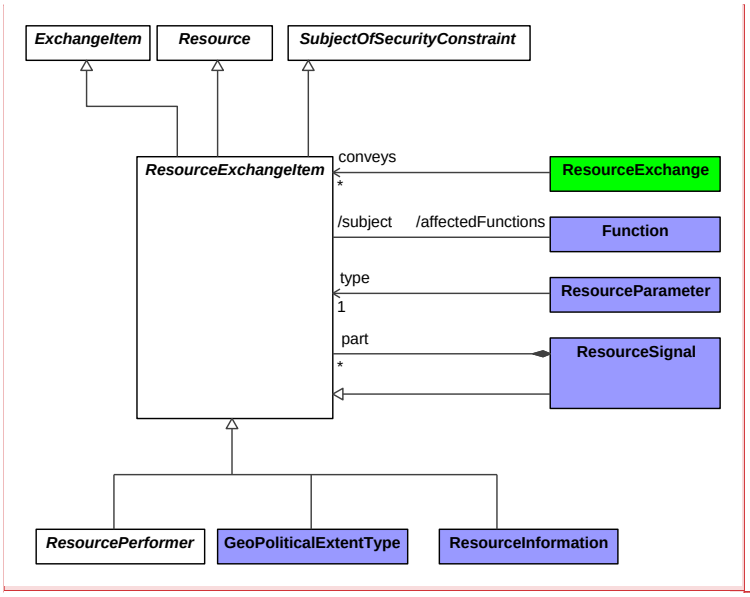
isAbstract: Yes

Generalization: Resource, SubjectOfSecurityConstraint, ExchangeItem

Description

An abstract type grouping elements that defines the types of elements that can be exchanged between ResourcePerformers and conveyed by a ResourceExchange.

Commented [KG433]: UAF12-33



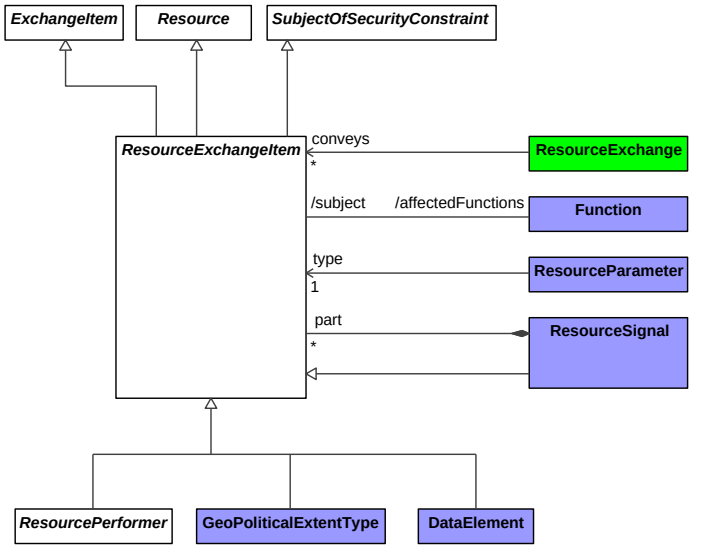


Figure 9:123 - ResourceExchangeItem

ResourceInterface

Package: Connectivity

isAbstract: No

Generalization: PropertySet

Description

A declaration that specifies a contract between the ResourcePerformers it is related to and any other ResourcePerformers it can interact with. It is also intended to be an implementation of a specification of an Interface in the Business and/or Service layer.

Commented [KG434]: UAF12-33

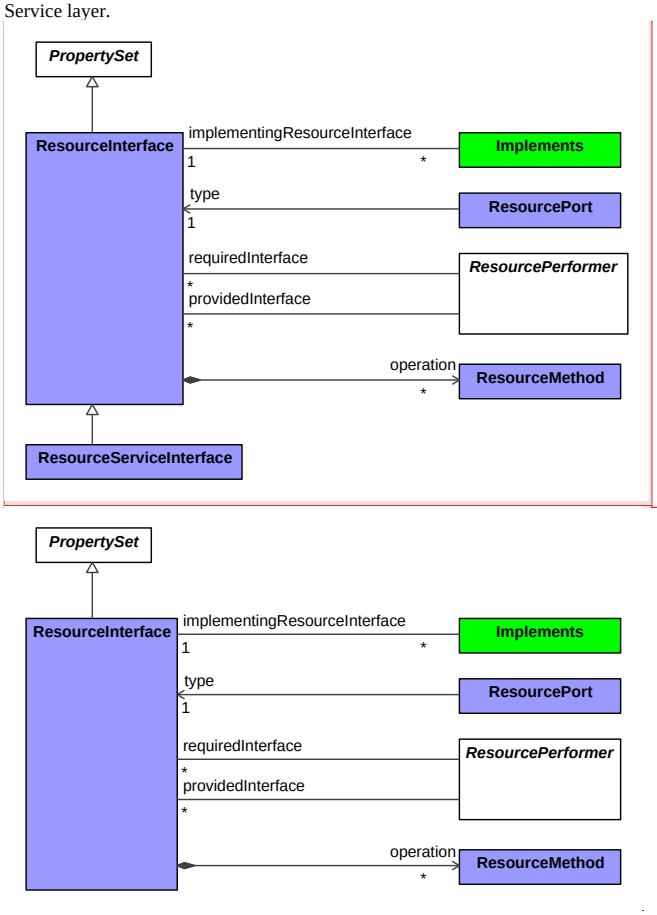

Figure 9:124 - ResourceInterface

ResourceServiceInterface

Package: Structure

isAbstract: No

Generalization: ResourceInterface
Description
A contract that defines the ResourceMethods and ResourceSignal receptions that the ResourceServices realize.

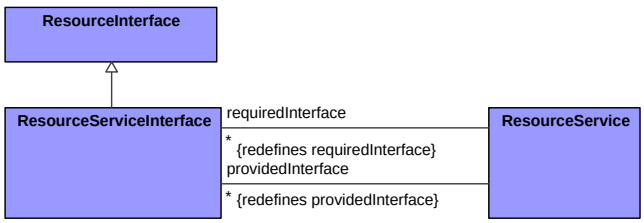

Figure 9:119 - ResourceServiceInterface

Formatted: Default Paragraph Font, Font: 10 pt, Bold
Formatted: Font: 10 pt, Bold

ResourceSignal

Package: Connectivity
isAbstract: No
Generalization: ResourceExchangeItem
Description
A property of an element representing something in the physical world, expressed in amounts of a unit of measure.

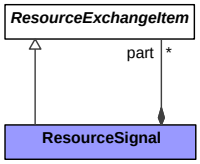

Figure 9:125 - ResourceSignal

Domain MetaModel::Resources::Processes

Function

Package: Processes
isAbstract: No
Generalization: SubjectOfResourceConstraint, Process
Description
An Activity which is specified in the context to the ResourcePerformer (human or machine) that IsCapableToPerform it.

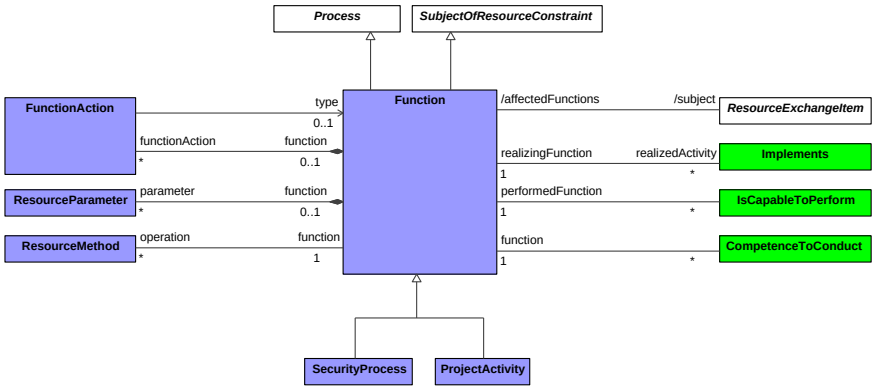

Figure 9:126 - Function

FunctionAction

Package: Processes

isAbstract: No

Generalization: ProcessUsage

Description

A call of a Function indicating that the Function is performed by a ResourceRole in a specific context.

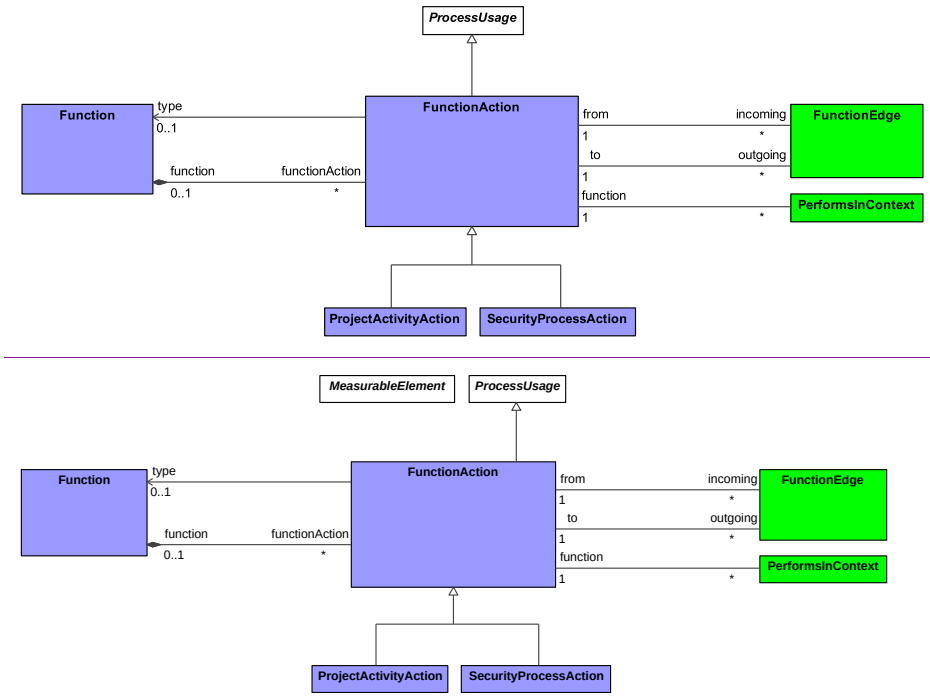

Figure 9:127 - FunctionAction

FunctionEdge

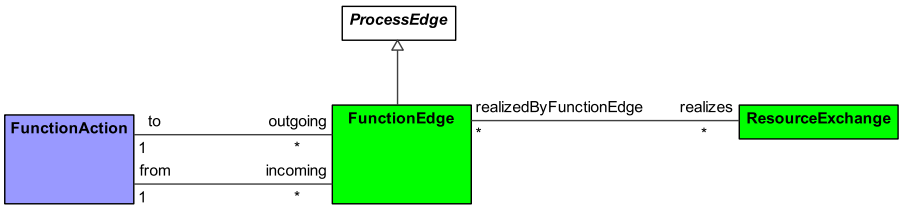
Package: Processes

isAbstract: No

Generalization: ProcessEdge

Description

A tuple that shows the flow of Resources (objects/data) between FunctionActions.



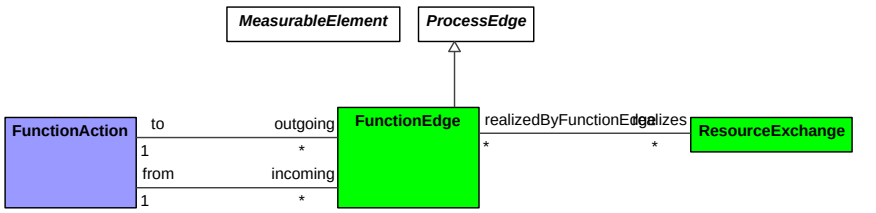


Figure 9:128 - FunctionEdge

Domain MetaModel::Resources::States

ResourceStateDescription

Package: States

isAbstract: No

Generalization: MeasurableElement, StateDescription

Description

A state machine describing the behavior of a ResourcePerformer, depicting how the ResourcePerformer responds to various events and the actions.

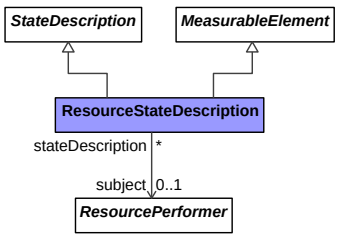

Figure 9:129 - ResourceStateDescription

Commented [KG436]: UAF12-59

ResourceMessage

Package: Sequences ~~Interaction Scenarios~~

Commented [KG437]: UAF12-59

isAbstract: No

Generalization: InteractionMessage

Description

Message for use in an Resource Event-Trace which carries any of the subtypes of ResourceExchange.

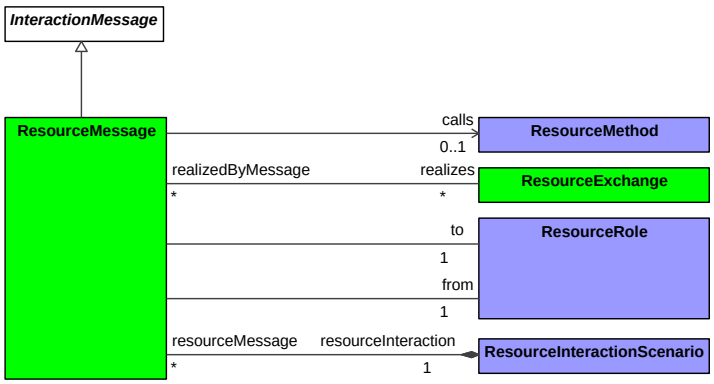

Figure 9:130 - ResourceMessage

Domain MetaModel::Resources::Information

ResourceInformation~~DataElement~~

Commented [KG438]: UAF12-33

Formatted: OMG Normal Paragraph

Package: Information

isAbstract: No

Generalization: SubjectOfResourceConstraint, ResourceAsset, ResourceExchangeItem

Description

A formalized representation of data that is managed by or exchanged between resources.

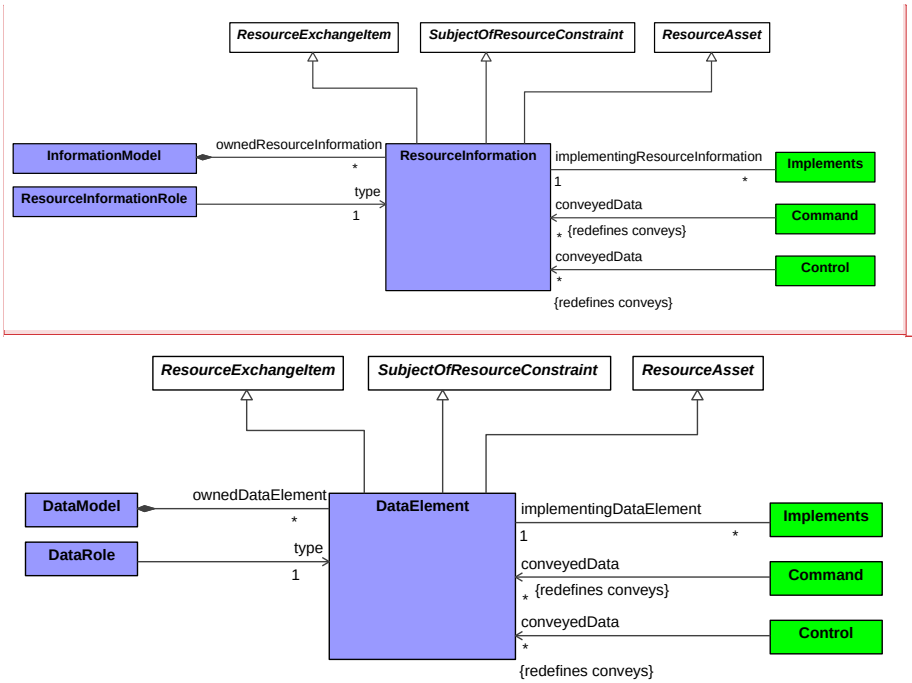

Figure 9:131 - ResourceInformation~~DataElement~~

Commented [KG439]: UAF12-33

Commented [KG440]: UAF12-33

~~DataRole~~

Commented [KG441]: UAF12-33

~~**Package:** Information~~

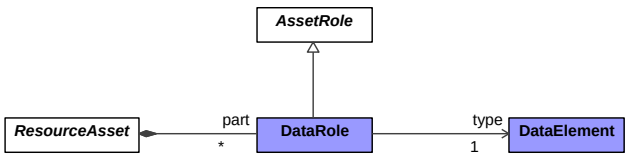
~~isAbstract: No~~

~~**Generalization:** AssetRole~~

~~Description~~

~~A usage of DataElement that exists in the context of an ResourceAsset. It also allows the representation of the whole-part aggregation of DataElements.~~

Commented [KG442]: UAF12-33



~~**Figure 9:132 - DataRole**~~

Commented [KG443]: UAF12-33

Domain MetaModel::Resources::Constraints

ResourceConstraint

Package: Constraints

isAbstract: No

Generalization: Rule

Description

A rule governing the structural or functional aspects of an implementation.

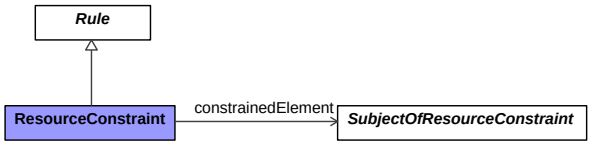


Figure 9:133 - ResourceConstraint

SubjectOfResourceConstraint

Package: Constraints

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type grouping elements that can be the subject of a ResourceConstraint.

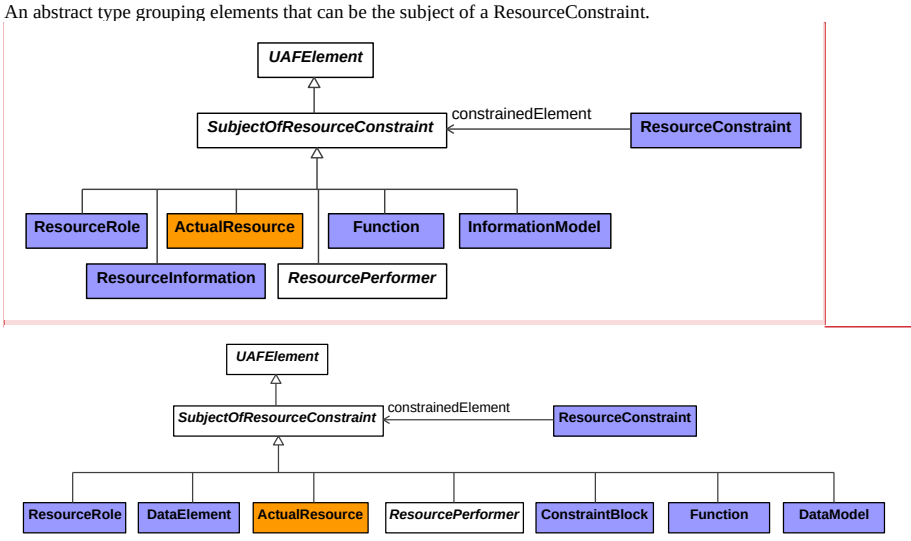

Figure 9:134 - SubjectOfResourceConstraint

Commented [KG444]: UAF12-33

Domain MetaModel::Resources::Roadmap

Forecast

Package: Roadmap

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that specifies a transition from one Asset, Standard, Competence to another future one. It is related to an ActualStrategicPhase ~~ActualEnterprisePhase~~ to give it a temporal context.

Commented [KG445]: UAF12-15
UAF12-12

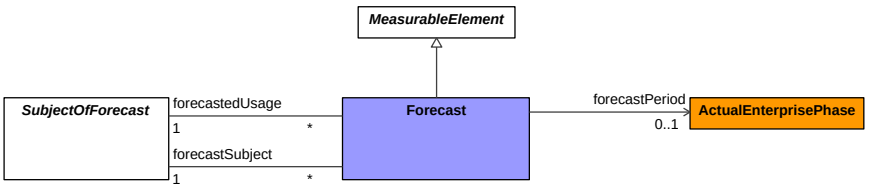

Figure 9:135 - Forecast

SubjectOfForecast

Package: Roadmap

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type grouping elements that can be the subject of a Forecast.

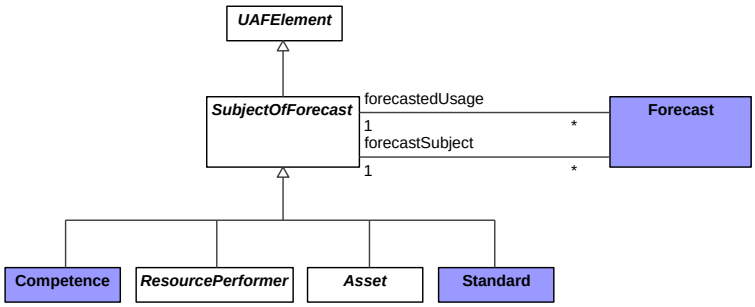

Figure 9:136 - SubjectOfForecast

Technology

Package: Roadmap

isAbstract: No

Generalization: ResourceArtifact

Description

A sub type of ResourceArtifact that indicates a technology domain, i.e. nuclear, mechanical, electronic, mobile telephony etc.

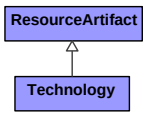

Figure 9:137 - Technology

VersionedElement

Package: Roadmap

isAbstract: Yes

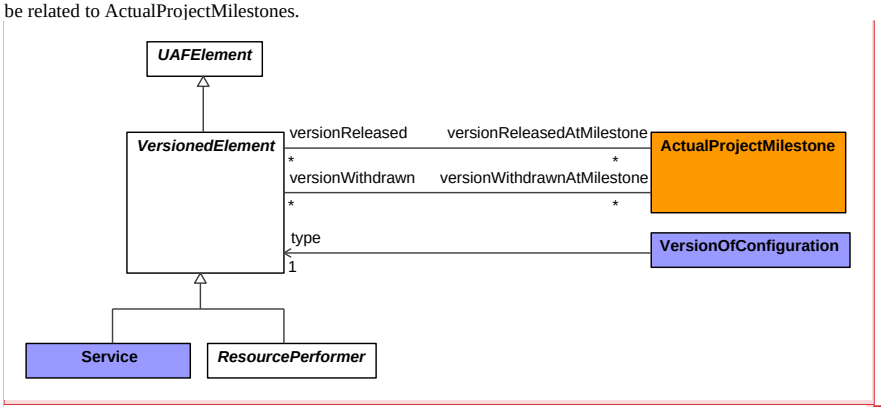
Generalization: UAFElement

Description

An abstract type grouping ResourcePerformer and Service ~~ServiceSpecification~~ that allows VersionOfConfiguration to be related to ActualProjectMilestones.

Commented [KG446]: UAF12-33

Commented [KG447]: UAF12-33



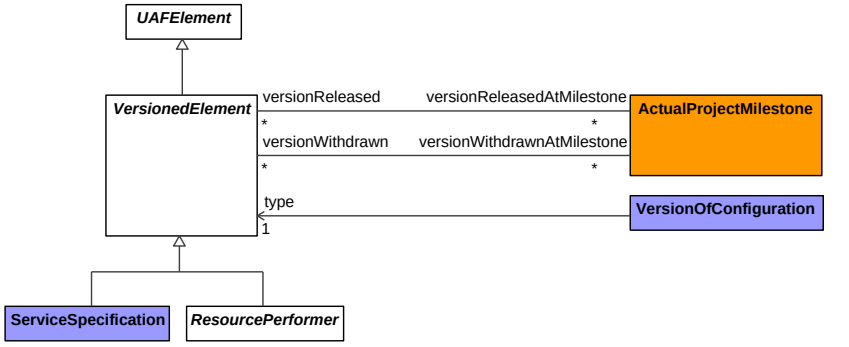


Figure 9:138 - VersionedElement

VersionOfConfiguration

Package: Roadmap

isAbstract: No

Generalization: MeasurableElement

Description

A property of a WholeLifeConfiguration, used in version control of a VersionedElement. It asserts that a VersionedElement is a version of a WholeLifeConfiguration.

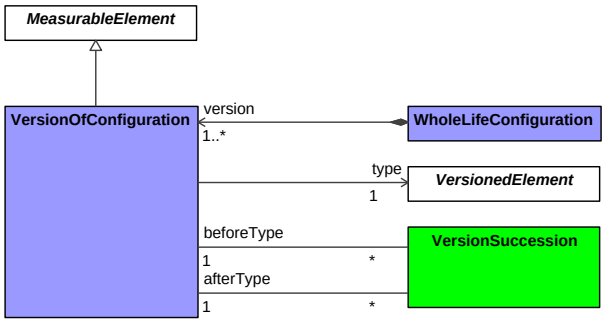

Figure 9:139 - VersionOfConfiguration

VersionSuccession

Package: Roadmap

isAbstract: No

Generalization: MeasurableElement

Description

A tuple between two VersionOfConfigurations that denotes that one VersionOfConfiguration follows from another.

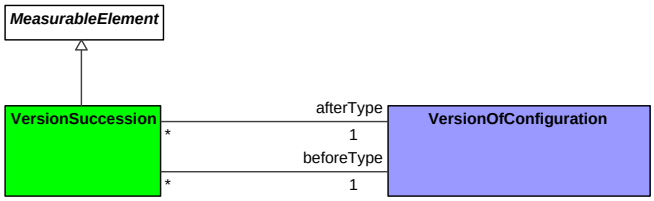

Figure 9:140 - VersionSuccession

WholeLifeConfiguration

Package: Roadmap

isAbstract: No

Generalization: PropertySet

Description

A set of VersionedElements, e.g., Services for a service provider or ResourcePerformers deployed for implementation~~A set of VersionedElements~~.

Commented [AM448]: UAF12-33

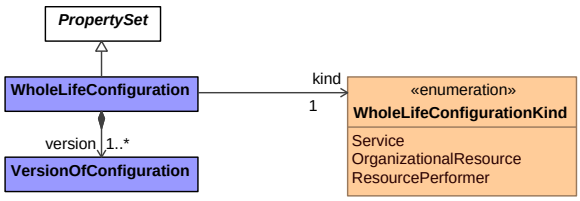

Figure 9:141 - WholeLifeConfiguration

Domain MetaModel::Resources::Traceability

ProtocolImplementation

Package: Traceability

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type grouping architectural elements that can implement Protocols.

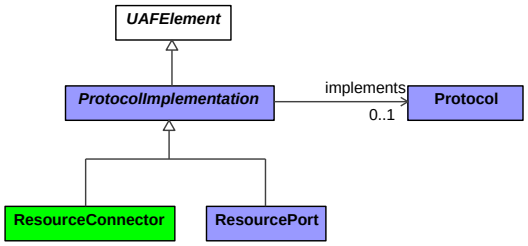

Figure 9:142 - ProtocolImplementation

~~15.1.8~~9.1.8 Domain MetaModel::Security

Stakeholders: Security Architects, Security Engineers. Systems Engineers, Operational Architects.
Concerns: addresses the security constraints and information assurance attributes that exist on exchanges between resources and OperationalPerformers
Definition: illustrates the security assets, security constraints, security controls, families, and measures required to address specific security concerns.

Domain MetaModel::Security::Motivation

Commented [KG449]: UAF12-50

EnhancedSecurityControl

Package: Motivation~~Processes~~

Commented [KG450]: UAF12-50

isAbstract: No

Generalization: SecurityControl

Description

Statement of security capability to: (i) build in additional but related, functionality to a basic control; and/or (ii)increase the strength of a basic control.

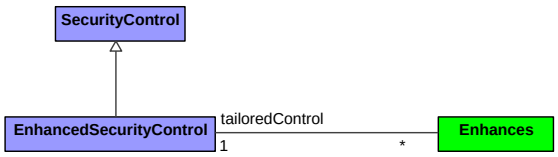

Figure 9:151 - EnhancedSecurityControl

Enhances

Package: Motivation~~Processes~~

Commented [KG451]: UAF12-50

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating the EnhancedSecurityControl to a SecurityControl.

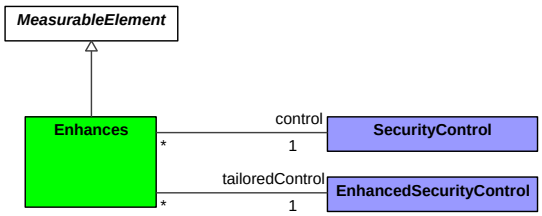

Figure 9:152 - Enhances

Protects

Package: Motivation~~Processes~~

Commented [KG452]: UAF12-50

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that a SecurityControl is required to protect an Asset.

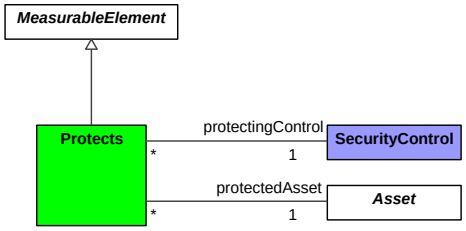

Figure 9:153 - Protects

ProtectsInContext

Package: Motivation~~Processes~~

Commented [KG453]: UAF12-50

isAbstract: No

Generalization: MeasurableElement
Description

A tuple that relates a SecurityControlAction to a OperationalRole, or a ResourceRole. It indicates that SecurityControl is required to protect an Asset in a specific context or configuration.

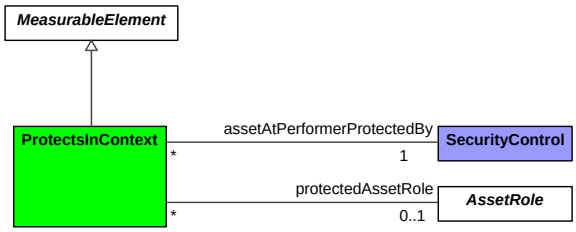

Figure 9:154 - ProtectsInContext

SecurityControl

Package: MotivationConstraints

Commented [KG454]: UAF12-50

isAbstract: No

Generalization: MeasurableElement
Description

The management, operational, and technical control (i.e., safeguard or countermeasure) prescribed for an information system to protect the confidentiality, integrity, and availability of the system and its information [NIST SP 800-53].

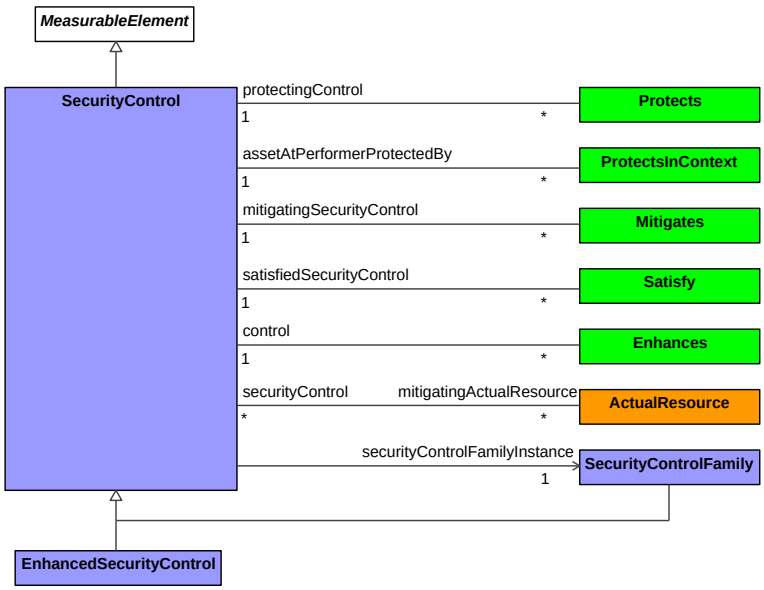

Figure 9:165 - SecurityControl

SecurityControlFamily

Package: ~~Constraints~~Motivation

isAbstract: No

Generalization: SecurityControl

Description

An element that organizes security controls into a family. Each Security Control Family contains security controls related to the general security topic of the family.

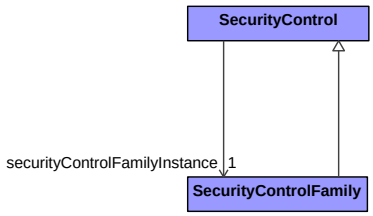

Figure 9:166 - SecurityControlFamily

Domain MetaModel::Security::Taxonomy

Asset

Package: Taxonomy

isAbstract: Yes

Generalization: SubjectOfForecast, ConceptItem, LocationHolder, PropertySet, SubjectOfSecurityConstraint, AffectableElement

Description

An abstract element that indicates the types of elements that can be affected by Risk. Asset as applied to Security views is an abstract element that indicates the types of elements that can be considered as a subject for security analysis

Formatted: OMG Normal Paragraph

Commented [KG455]: UAF12-50

Formatted: OMG Normal Paragraph

Formatted: OMG Bold Bullet KeepNext Paragraph

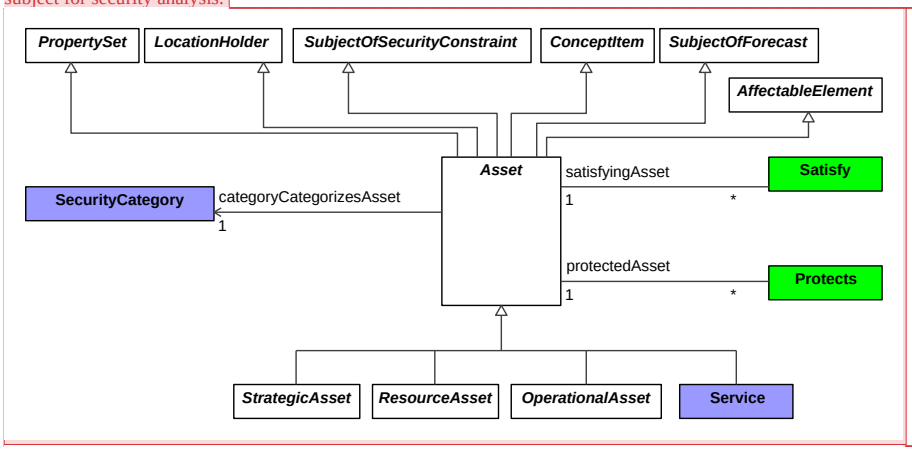
~~Asset as applied to Security views, an abstract type that indicates the types of elements that can be considered as a subject for security analysis.~~



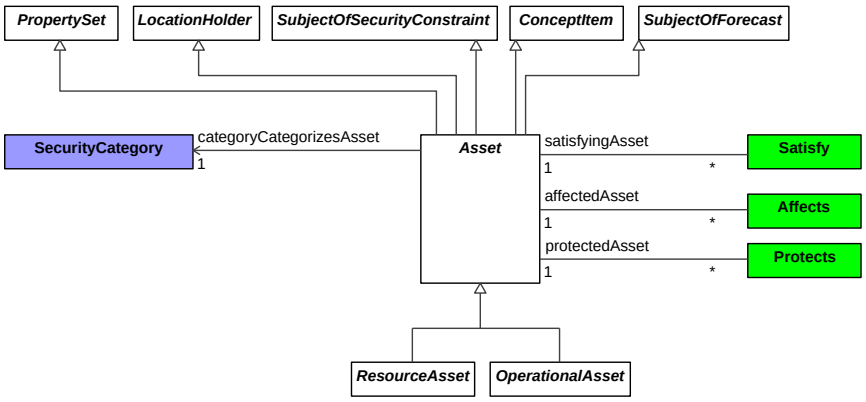


Figure 9:143 - Asset

OperationalAsset

Package: Taxonomy

isAbstract: Yes

Generalization: Asset

Description

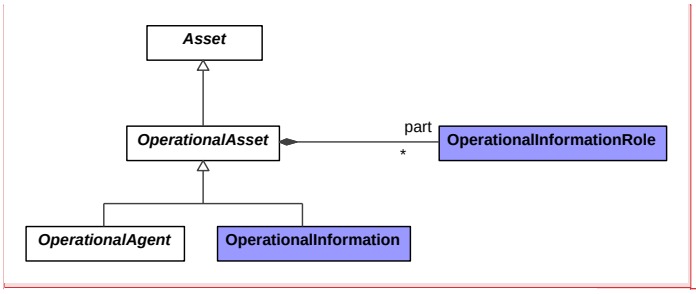
An abstract element used to group the elements of OperationalAgent and OperationalInformation allowing them to own OperationalInformationRoles.

Formatted: OMG Normal Centered Image Anchor Paragraph

Commented [KG457]: UAF12-51

Commented [KG458]: UAF12-51

Commented [KG459]: UAF12-33



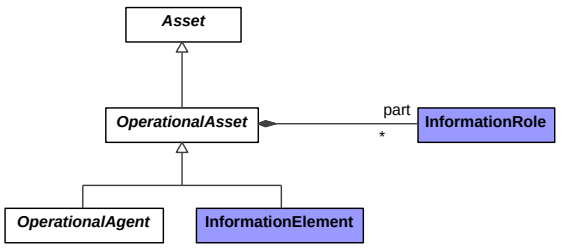


Figure 9:144 - OperationalAsset

OperationalMitigation

Package: Taxonomy

isAbstract: No

Generalization: OperationalArchitecture

Description

A set of OperationalPerformers intended to address against specific operational risks.

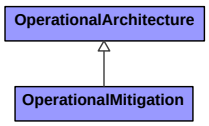

Figure 9:145 - OperationalMitigation

ResourceAsset

Package: Taxonomy

isAbstract: Yes

Generalization: Asset

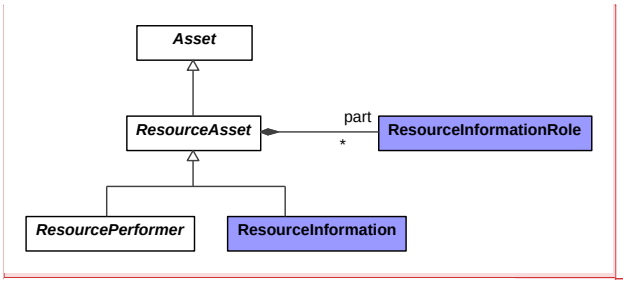
Description

An abstract element used to group the elements of ResourcePerformer and ResourceInformation allowing them to own ResourceInformationRoles

Commented [KG460]: UAF12-33

Commented [KG461]: UAF12-33

Commented [KG462]: UAF12-33



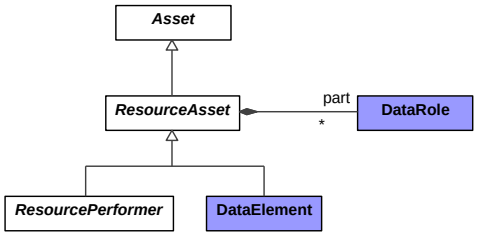


Figure 9:146 - ResourceAsset

ResourceMitigation

Package: Taxonomy

isAbstract: No

Generalization: ResourceArchitecture

Description

A set of ResourcePerformers intended to address against specific risks.

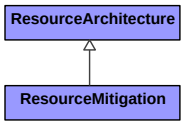

Figure 9:147 - ResourceMitigation

SecurityEnclave

Package: Taxonomy

isAbstract: No

Generalization: ResourceArchitecture

Description

Collection of information systems connected by one or more internal networks under the control of a single authority and security policy. The systems may be structured by physical proximity or by function, independent of location.

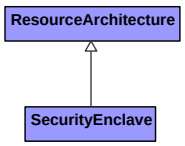

Figure 9:148 - SecurityEnclave

Domain MetaModel::Security::Structure

AssetRole

Package: Structure

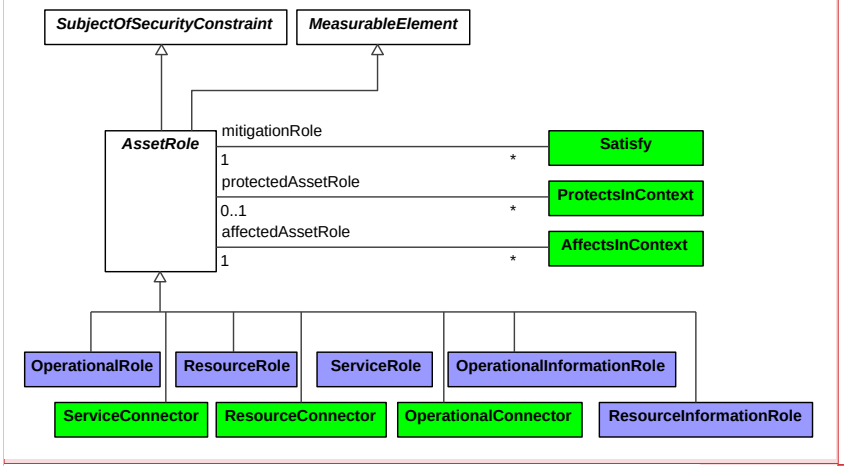
isAbstract: Yes

Generalization: BPMN2Metamodel::ResourceRole, SubjectOfSecurityConstraint, MeasurableElement

Description

An abstract element that indicates the types of elements that can be affected by Risk in the particular context. AssetRole as applied to Security views, is an abstract element that indicates the type of elements that can be considered as a subject for security analysis in the particular context.

~~AssetRole as applied to Security views, an abstract element that indicates the type of elements that can be considered as a subject for security analysis in the particular context.~~



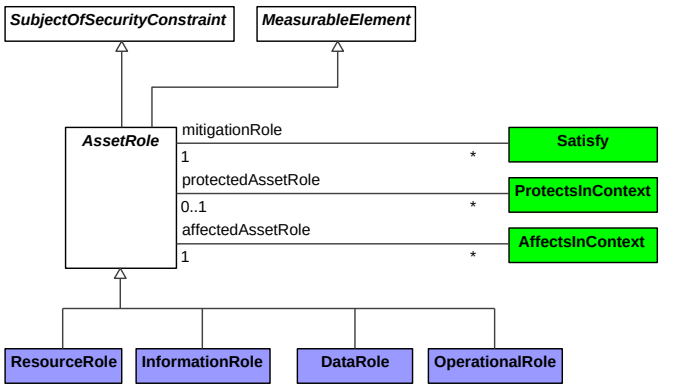


Figure 9:149 - AssetRole

OperationalInformationRole~~InformationRole~~

Package: Structure

isAbstract: No

Generalization: AssetRole

Description

A usage of OperationalInformation ~~InformationElement~~ that exists in the context of an OperationalAsset. It also allows the representation of the whole-part aggregation of OperationalInformation~~InformationElements~~.

Formatted: OMG Normal Centered Image Anchor Paragraph

Commented [KG463]: UAF12-51

Formatted: OMG Normal Paragraph

Commented [KG475]: UAF12-50 Moved to Security Motivation view soecification.

SecurityProcess

Package: Processes

isAbstract: No

Generalization: OperationalActivity, Function, SubjectOfSecurityConstraint

Description

The security-related procedure that satisfies the security control requirement.

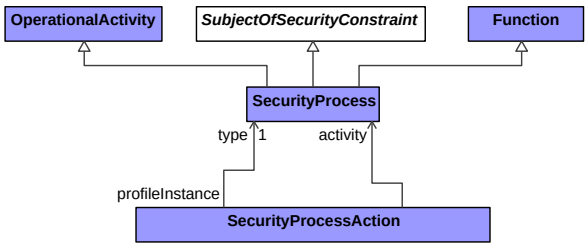

Figure 9:155 - SecurityProcess

SecurityProcessAction

Package: Processes

isAbstract: No

Generalization: OperationalActivityAction, FunctionAction

Description

A call of a SecurityProcess in the context of another SecurityProcess.

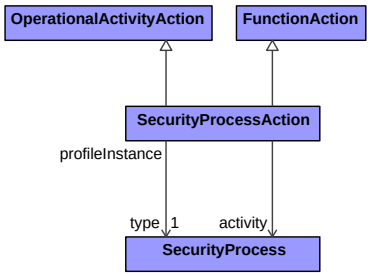

Figure 9:156 - SecurityProcessAction

Domain MetaModel::Security::Constraints

~~ActualRisk~~

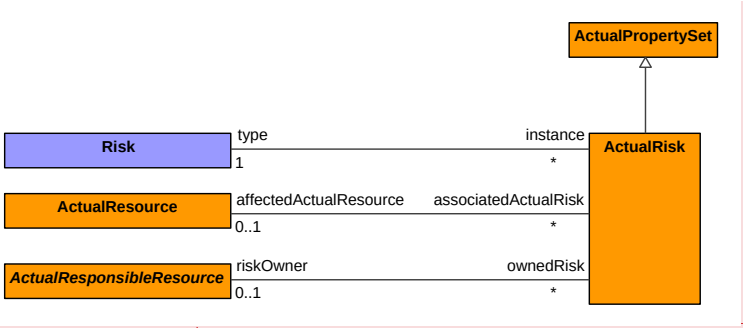
~~**Package:** Constraints~~

~~isAbstract: No~~

~~**Generalization:** ActualPropertySet~~

~~Description~~

~~An instance of a Risk. A value holder for Risk Measurements.~~



~~**Figure 9:157 - ActualRisk**~~

Commented [KG476]: UAF12-51

Caveat

Package: Constraints

isAbstract: No

Generalization: SecurityConstraint

Description

A statement that details alternate conditions under which the rule is not valid.

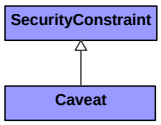


Figure 9:158 - Caveat

~~**Risk**~~

Commented [KG477]: UAF12-51

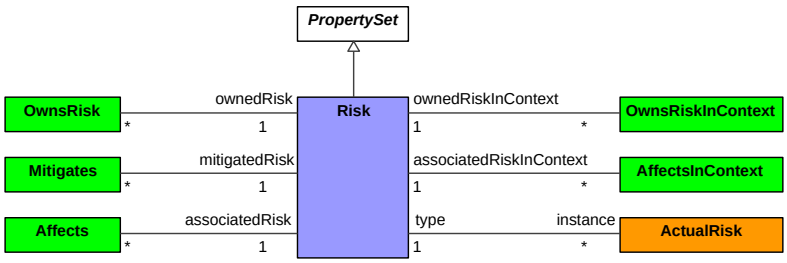
~~**Package:** Constraints~~

~~isAbstract: No~~

~~**Generalization:** PropertySet~~

~~Description~~

~~A statement of the impact of an event on Assets. It represents a constraint on an Asset in terms of adverse effects, with an associated measure. The measure is used to capture the extent to which an entity is threatened by a potential circumstance or event. Risk is typically a function of: (i) the adverse impacts that would arise if the circumstance or event occurs; and (ii) the likelihood of occurrence.~~



~~Figure 9:159 - Risk~~

SecurityAvailability

Package: Constraints

isAbstract: No

Generalization: SecurityMeasurement

Description

Details the potential impact on organization or individuals if the information is not available to those who need to access it.

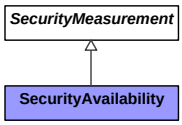


Figure 9:160 - SecurityAvailability

SecurityCategory

Package: Constraints

isAbstract: No

Generalization: MeasurementSet

Description

The security categories that have been determined for each type of information processed, stored, or transmitted by those information systems. The generalized format for expressing the security category (SC) of an information system is: SC information system = {(confidentiality, impact), (integrity, impact), (availability, impact)}.

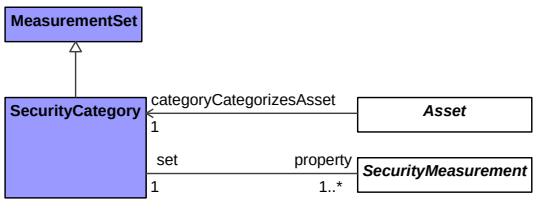

Figure 9:161 - SecurityCategory

SecurityClassification

Package: Constraints

isAbstract: No

Generalization: SecurityMeasurement

Description

Details a classification for the exchange.

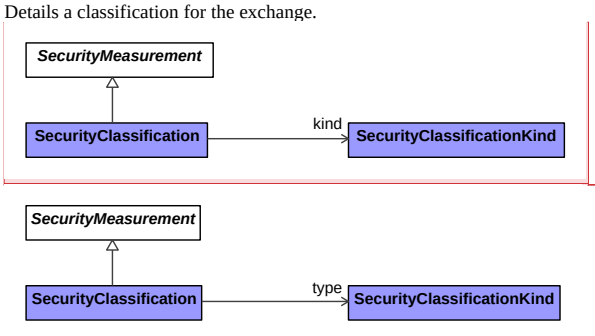

Figure 9:162 - SecurityClassification

SecurityClassificationKind

Package: Constraints

isAbstract: No

Generalization: MeasurableElement

Description

A type that defines acceptable values for the security category (SC) of an information system, where the acceptable values for potential impact are low, moderate, or high.

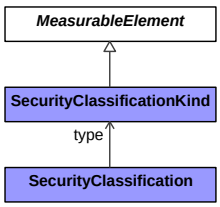

Figure 9:163 - SecurityClassificationKind

SecurityConstraint

Package: Constraints

isAbstract: No

Generalization: Rule

Description

A type of rule that captures a formal statement to define access control policy language.

Commented [KG478]: UAF12-28

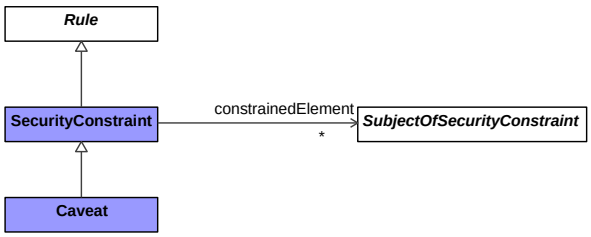

Figure 9:164 - SecurityConstraint

~~SecurityControl~~

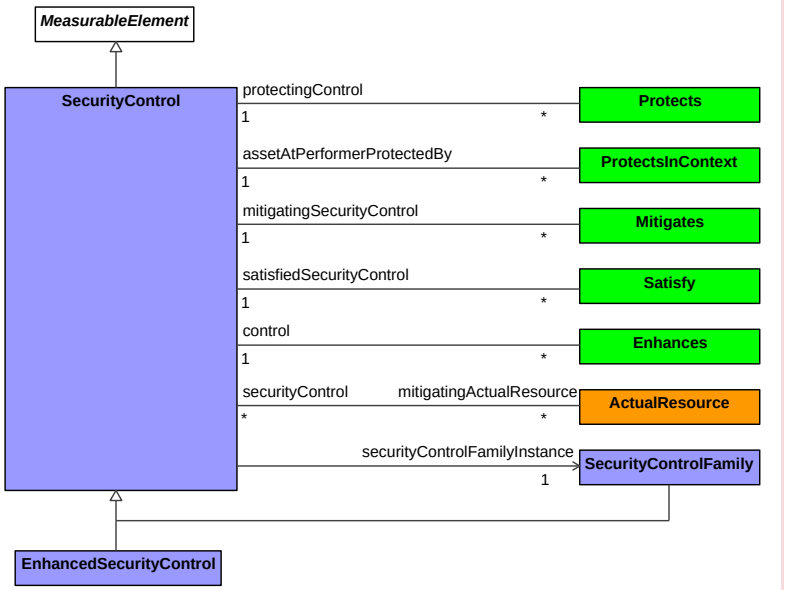
~~**Package:** Constraints~~

~~isAbstract: No~~

~~**Generalization:** MeasurableElement~~

~~Description~~

~~The management, operational, and technical control (i.e., safeguard or countermeasure) prescribed for an information system to protect the confidentiality, integrity, and availability of the system and its information [NIST SP 800-53].~~



~~**Figure 9:165 – SecurityControl**~~

Commented [KG479]: UAF12-50 Moved to the motivation Aspect

SecurityIntegrity

Package: Constraints

isAbstract: No

Generalization: SecurityMeasurement
Description

Details the potential impact on organization or individuals due to modification or destruction of information, and includes ensuring information non-repudiation and authenticity.

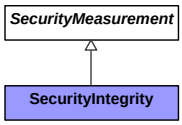


Figure 9:167 - SecurityIntegrity

SecurityMeasurement

Package: Constraints

isAbstract: Yes

Generalization: Measurement
Description

An abstract type grouping all types of security measurements (e.g. SecurityIntegrity, SecurityAvailability).

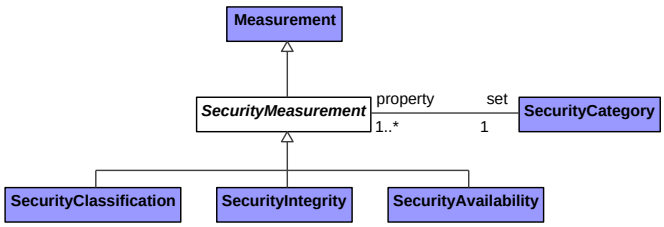

Figure 9:168 - SecurityMeasurement

SubjectOfSecurityConstraint

Package: Constraints

isAbstract: Yes

Generalization: UAFElement
Description

An abstract type grouping elements that can be the subject of a SecurityConstraint.

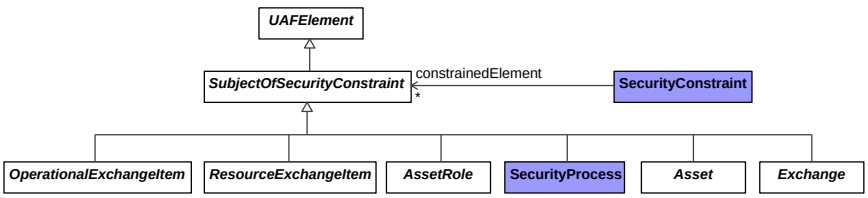

Figure 9:169 - SubjectOfSecurityConstraint

Domain MetaModel::Security::Traceability

Commented [KG480]: UAF12-51 Elements moved to the Parameters section

Affects

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that a Risk is applicable to an Asset.

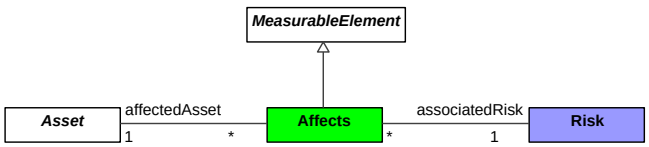

Figure 9:170 - Affects

AffectsInContext

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that a Risk is applicable to an AssetRole in the specific context or configuration.

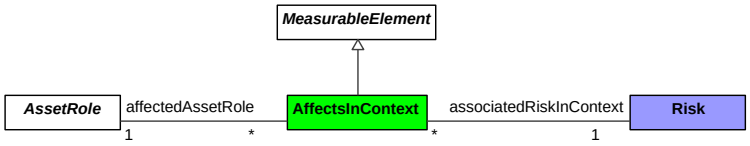

Figure 9:171 - AffectsInContext

Mitigates

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating a Security Control to a Risk. Mitigation is established to manage risk and could be represented as an overall strategy or through techniques (mitigation configurations) and procedures (SecurityProcesses).

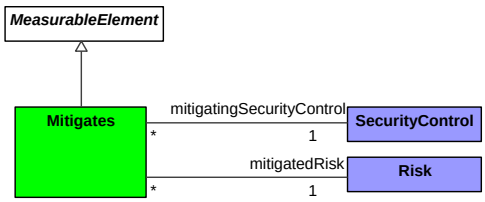

Figure 9:172 - Mitigates

OwnsRisk

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating a Risk to an organizational resource that is responsible for executing the risk mitigation.

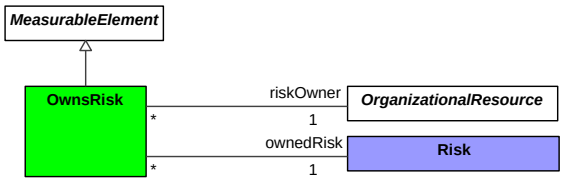

Figure 9:173 - OwnsRisk

OwnsRiskInContext

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating a Risk to an organizational role that is responsible for executing the risk mitigation in the specific context or configuration.

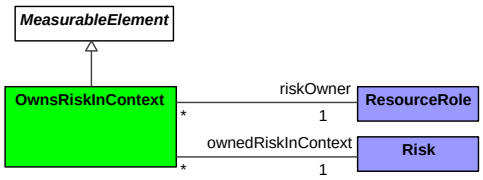

Figure 9:174 - OwnsRiskInContext

~~15.1.50~~9.1.9 Domain MetaModel::Projects

Domain MetaModel::Projects::Taxonomy

Project

Package: Taxonomy

isAbstract: No

Generalization: OrganizationalResource

Description

A type that represents a planned endeavor executed by an ActualOrganization responsible for developing, deploying or decommissioning ResourcePerformers in accordance with ActualProjectMilestones~~A type that describes types of time-limited endeavors that are required to meet one or more Capability needs~~.

Commented [AM481]: UAF12-58

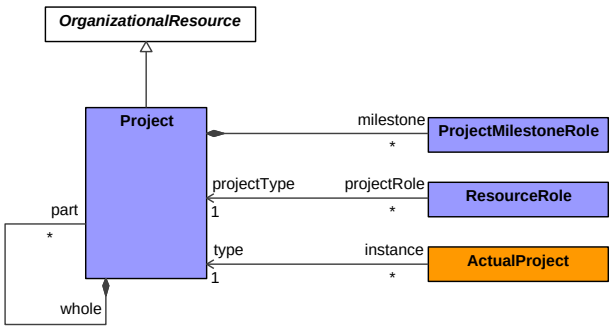

Figure 9:175 - Project

ProjectMilestone

Package: Taxonomy

isAbstract: No

Generalization: PropertySet

Description

A type of event in a Project by which progress is measured.

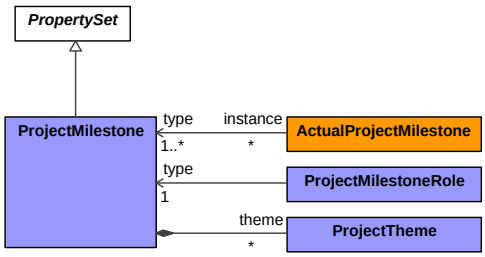

Figure 9:176 - ProjectMilestone

Domain MetaModel::Projects::Structure

ActualProjectMilestoneRole

Package: Structure

isAbstract: No

Generalization: ActualState

Description

An ActualProjectMilestone that is applied to a ProjectMilestoneRole.

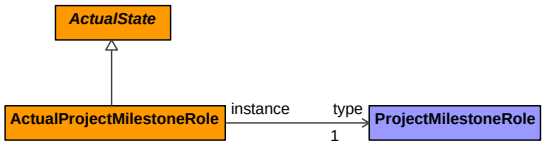

Figure 9:177 - ActualProjectMilestoneRole

ProjectMilestoneRole

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

The role played by a ProjectMilestone in the context of a Project.

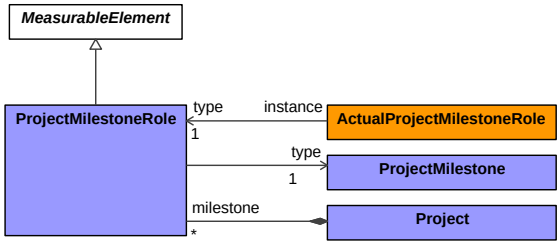

Figure 9:178 - ProjectMilestoneRole

ProjectStatus

Package: Structure

isAbstract: No

Generalization: ActualState

Description

The status (i.e. level of progress) of a ProjectTheme for an ActualProject at the time of the ActualProjectMilestone.

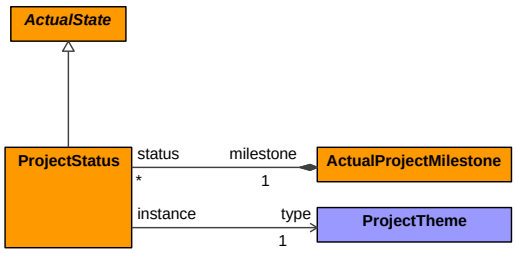

Figure 9:179 - ProjectStatus

ProjectTheme

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

A property of a ProjectMilestone that captures an aspect by which the progress of ActualProjects may be measured.

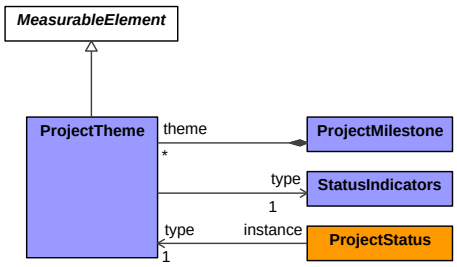

Figure 9:180 - ProjectTheme

StatusIndicators

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

An enumerated type that specifies a status for a ProjectTheme.

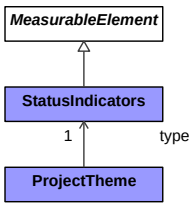

Figure 9:181 - StatusIndicators

Domain MetaModel::Projects::Connectivity

MilestoneDependency

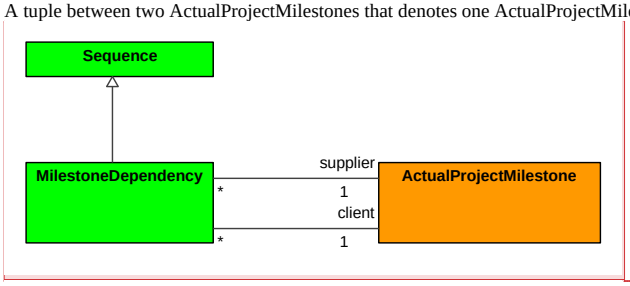
Package: Connectivity

isAbstract: No

Generalization: SequenceMeasurableElement

Description

A tuple between two ActualProjectMilestones that denotes one ActualProjectMilestone follows from another.



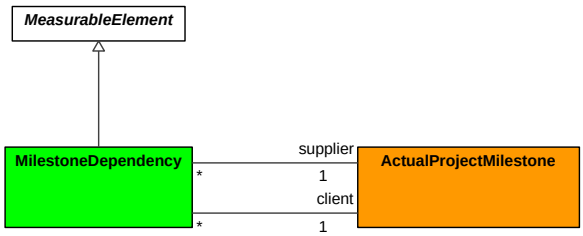


Figure 9:182 - MilestoneDependency

ProjectSequence

Package: Connectivity

isAbstract: No

Generalization: SequenceDescription

A tuple between two ActualProjects that denotes one ActualProject cannot start before the previous ActualProject is finished.

Commented [KG482]: UAF12-117

Commented [KG486]: UAF12-117

Figure 9:185 - ProjectSequence

Domain MetaModel::Projects::Processes

ProjectActivity

Package: Processes

isAbstract: No

Generalization: Function, Process

Description

An activity carried out during a project.

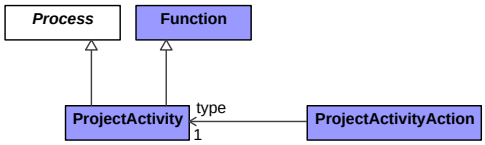

Figure 9:183 - ProjectActivity

ProjectActivityAction

Package: Processes

isAbstract: No

Generalization: FunctionAction

Description

The ProjectActivityAction is defined as a call behavior action that invokes the activity that needs to be preformed.

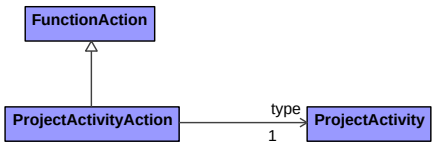

Figure 9:184 - ProjectActivityAction

~~Domain MetaModel::Projects::Interaction Scenarios~~

Commented [KG487]: UAF12-59

Domain MetaModel::Projects::Roadmap

ActualProject

Package: Roadmap

isAbstract: No

Generalization: ActualOrganizationalResource, Achiever

Description

A time-limited planned endeavor executed by an ActualOrganization responsible for developing, deploying or decommissioning ResourcePerformers in accordance with ActualProjectMilestones.

~~A time-limited endeavor to provide a specific set of ActualResources that meet specific Capability needs.~~

Formatted: Font: (Default) Times New Roman, 10 pt, Font color: Auto, Pattern: Clear

Formatted: OMG Normal Paragraph

Commented [AM488]: UAF12-58

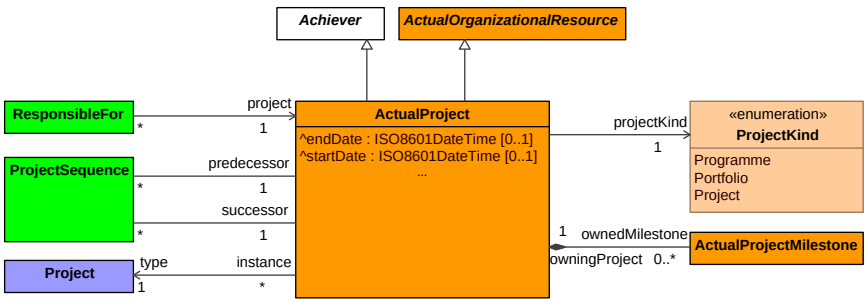

Figure 9:186 - ActualProject

ActualProjectMilestone

Package: Roadmap

isAbstract: No

Generalization: ActualPropertySet

Description

An event with a start date in a ActualProject from which progress is measured.

Figure 9:187 - ActualProjectMilestone
Constraints
[1] unnamed1 startTime=endTime

Domain MetaModel::Projects::Traceability

ResponsibleFor

Package: Traceability
isAbstract: No
Generalization: MeasurableElement
Description
A tuple between an ActualResponsibleResource and an ActualResponsibility or ActualProject. It defines the duties that the ActualResponsibleResource is ResponsibleFor.

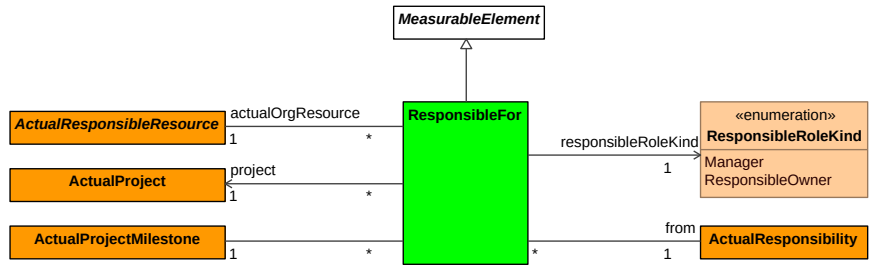

Figure 9:188 - ResponsibleFor

~~15.1.51~~9.1.10 Domain MetaModel::Standards

Stakeholders: Solution Providers, Systems Engineers, Software Engineers, Systems Architects, Business Architects.
Concerns: technical and non-technical Standards applicable to the architecture.
Definition: shows the technical, operational, and business Standards applicable to the architecture. Defines the underlying current and expected Standards.

Domain MetaModel::Standards::Taxonomy

Protocol

Package: Taxonomy

isAbstract: No

Generalization: Standard

Description

A Standard for communication over a network. Protocols may be composite, represented as a ProtocolStack made up of ProtocolLayers.

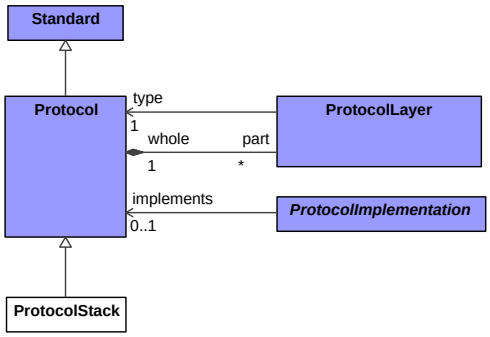

Figure 9:189 - Protocol

ProtocolStack

Package: Taxonomy

isAbstract: No

Generalization: Protocol

Description

A sub type of Protocol that contains the ProtocolLayers, defining a complete stack.

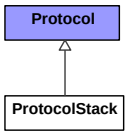

Figure 9:190 - ProtocolStack

Standard

Package: Taxonomy

isAbstract: No

Generalization: SubjectOfForecast, PropertySet

Description

A ratified and peer-reviewed specification that is used to guide or constrain the architecture. A Standard may be applied to any element in the architecture.

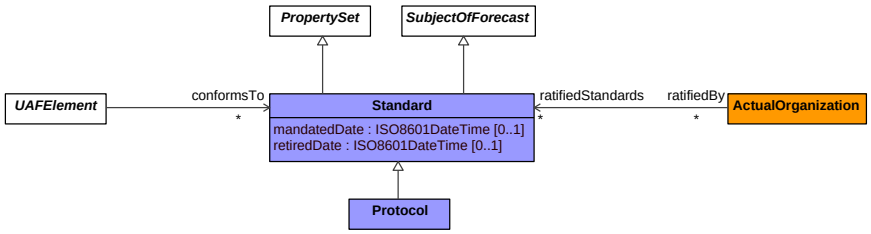

Figure 9:191 - Standard
Attributes

mandatedDate : ISO8601DateTime[0..1]	The date when this version of the Standard was published.
retiredDate : ISO8601DateTime[0..1]	The date when this version of the Standard was retired.

Domain MetaModel::Standards::Structure

ProtocolLayer

Package: Structure

isAbstract: No

Generalization: MeasurableElement
Description

Usage of a Protocol in the context of another Protocol. Creates a whole-part relationship.

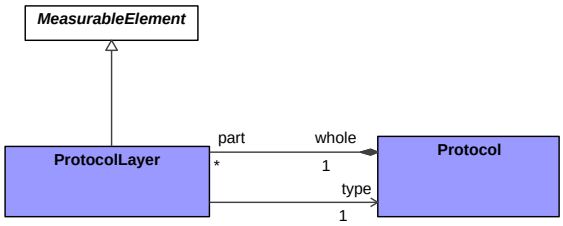

Figure 9:192 - ProtocolLayer

~~15.1.52~~9.1.11 Domain MetaModel::Actual Resources

Stakeholders: Solution Providers, Systems Engineers, Business Architects, Human Resources.
Concerns: the analysis.e.g. evaluation of different alternatives, what-if, trade-offs, V&V on the actual resource configurations.
Definition: illustrates the expected or achieved actual resource configurations and actual relationships between them.

Domain MetaModel::Actual Resources::Taxonomy

ActualOrganization

Package: Taxonomy

isAbstract: No

Generalization: ActualResponsibleResource

Description

An actual formal or informal organizational unit, e.g. "Driving and Vehicle Licensing Agency", "UAF team Alpha".

Commented [KG489]: UAF12-15

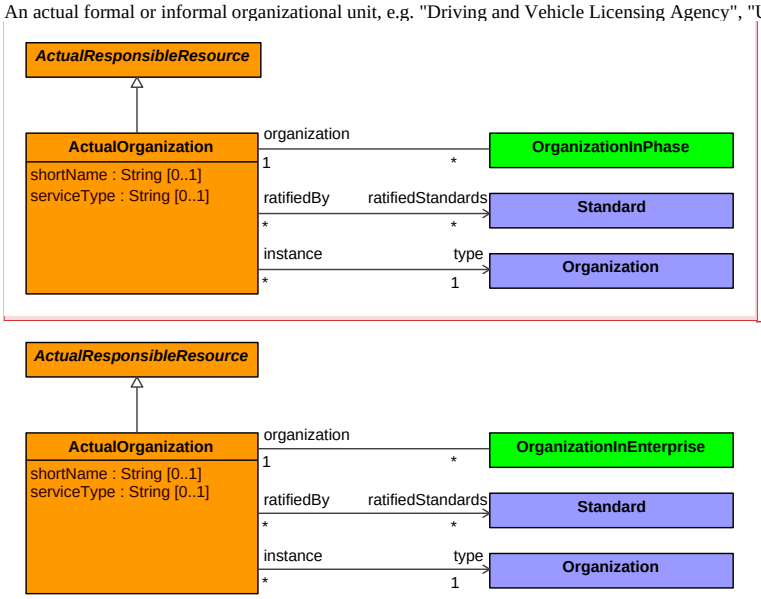

Figure 9:193 - ActualOrganization

Attributes

serviceType : String[0..1]	Service office code or symbol
shortName : String[0..1]	String providing a simplified means of identifying an ActualOrganization, i.e. SoftWareGroup could use SWG as the shortName.

ActualOrganizationalResource

Package: Taxonomy

isAbstract: Yes

Generalization: ActualResource, Stakeholder

Description

Abstract element for an ActualOrganization, ActualPerson or ActualPost.

Commented [KG490]: UAF12-117

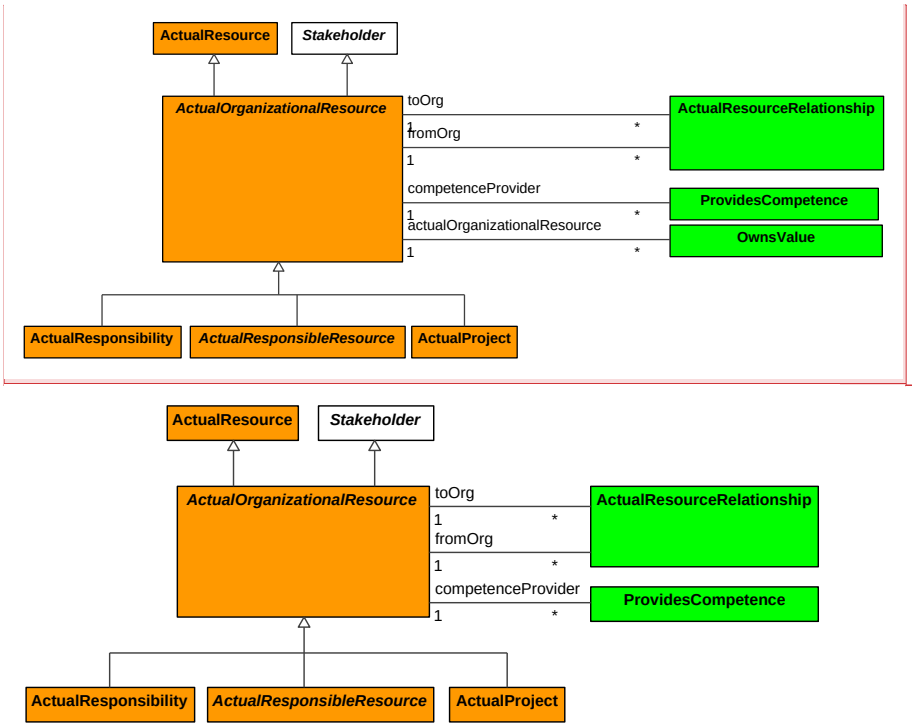

Figure 9:194 - ActualOrganizationalResource

ActualPerson

Package: Taxonomy

isAbstract: No

Generalization: ActualResponsibleResource

Description

An individual human being.

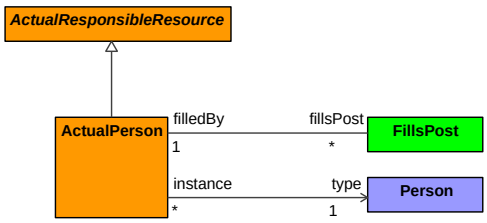

Figure 9:195 - ActualPerson

ActualPost

Package: Taxonomy

isAbstract: No

Generalization: ActualResponsibleResource

Description

An actual, specific post, an instance of a Post "type" - e.g., "President of the United States of America." where the Post would be president.

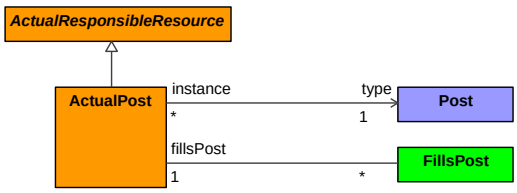

Figure 9:196 - ActualPost

ActualResource

Package: Taxonomy

isAbstract: No

Generalization: ActualPropertySet, SubjectOfResourceConstraint, Achiever, CapableElement

Description

An instance of a ResourcePerformer in the real world~~An individual, fully-realized ResourcePerformer~~.

Commented [AM491]: UAF12-58

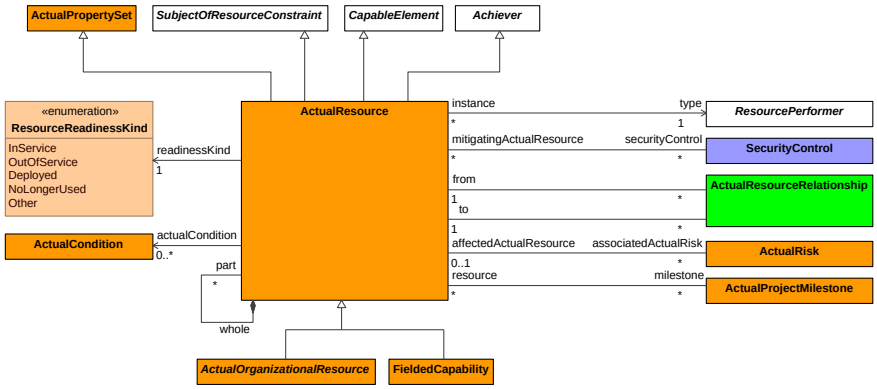

Figure 9:197 - ActualResource

ActualResourceRelationship

Package: Taxonomy

isAbstract: No

Generalization: UAFElement

Description

An actual resource flow existing between ActualResources (i.e. flow of data, people, materiel, or energy).

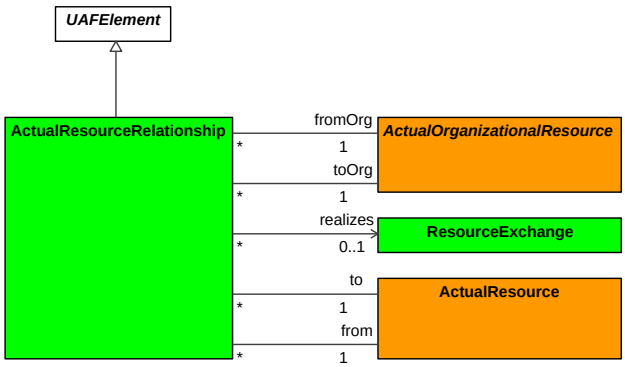

Figure 9:198 - ActualResourceRelationship

ActualResponsibility

Package: Taxonomy

isAbstract: No

Generalization: ActualOrganizationalResource

Description

An actual duty required of a Person or Organization.

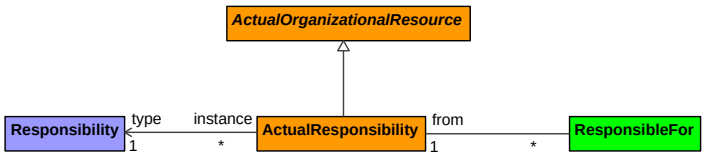

Figure 9:199 - ActualResponsibility

ActualResponsibleResource

Package: Taxonomy

isAbstract: Yes

Generalization: ActualOrganizationalResource

Description

An abstract type grouping responsible OrganizationalResources.

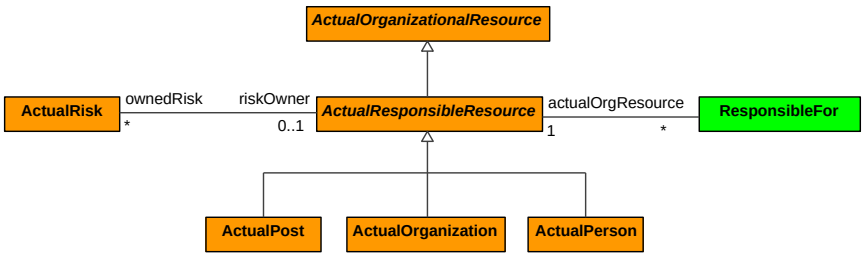

Figure 9:200 - ActualResponsibleResource

FieldedCapability

Package: Taxonomy

isAbstract: No

Generalization: ActualResource

Description

An individual, fully-realized capability.

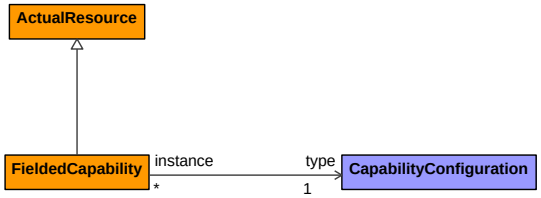

Figure 9:201 - FieldedCapability

Domain MetaModel::Actual Resources::Constraints

ActualService

Package: Constraints

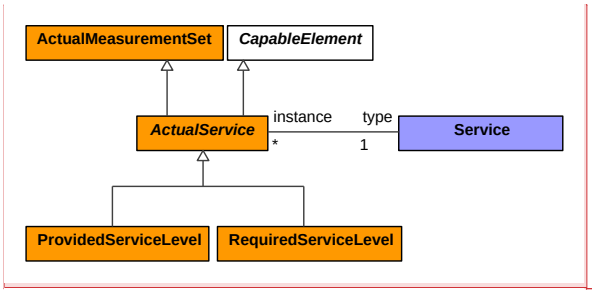
isAbstract: Yes

Generalization: ActualMeasurementSet, CapableElement

Description

An individual ServiceSpecification.

Commented [KG492]: UAF12-33



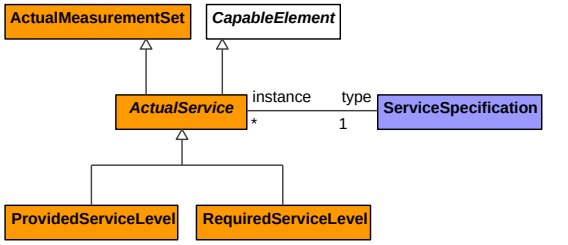


Figure 9:202 - ActualService

ProvidedServiceLevel

Package: Constraints

isAbstract: No

Generalization: ActualService

Description

A sub type of ActualService that details a specific service level delivered by the provider.

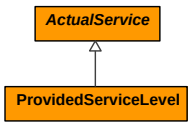

Figure 9:203 - ProvidedServiceLevel

ProvidesCompetence

Package: Constraints

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that an ActualOrganizationalResource provides a specific set of Competencies.

Commented [KG493]: UAF12-33

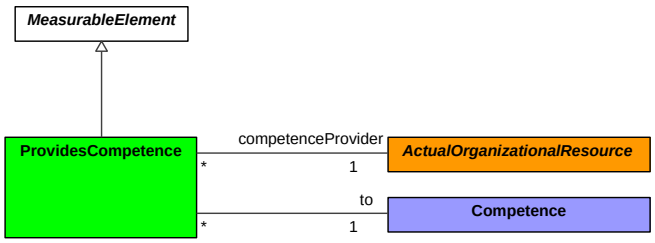

Figure 9:204 - ProvidesCompetence

RequiredServiceLevel

Package: Constraints

isAbstract: No

Generalization: ActualService

Description

A sub type of ActualService that details a specific service level required of the provider.

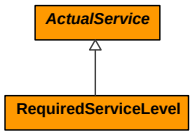

Figure 9:205 - RequiredServiceLevel

Domain MetaModel::Actual Resources::Traceability

OwnsProcess

Package: Traceability

isAbstract: No

Generalization: MeasurableElement

Description

A tuple denoting that an ActualOrganizationResource owns an OperationalActivity.

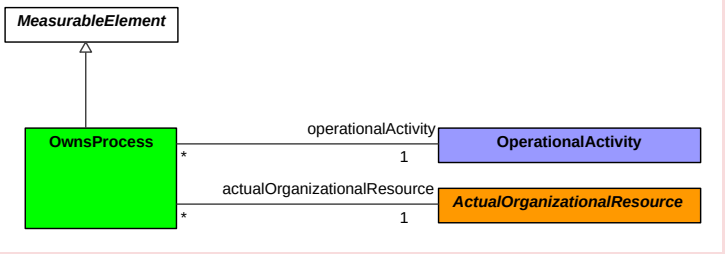

Figure 9:245 - OwnsProcess

Commented [KG494]: UAF12-52

Formatted: Body Text

15.1.53 Domain MetaModel::Dictionary

Stakeholders: Architects, users of the architecture, Capability Owners, Systems Engineers, Solution Providers.

Concerns: Definitions for all the elements in the architecture, libraries of environments and measurements.

Definition: Presents all the elements used in an architecture. Can be used specifically to capture:

- a. elements and relationships that are involved in defining the environments applicable to capability, operational concept or set of systems.
- b. measurable properties that can be used to support analysis such as KPIs, MoEs, TPIs etc.

Recommended Implementation: Tabular format, SysML Block Definition Diagram.

Alias

Package: Dictionary

isAbstract: No

Generalization: MeasurableElement

Description

A metamodel Artifact used to define an alternative name for an element.

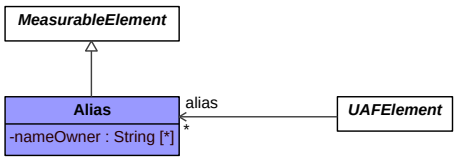

Figure 9:206 - Alias

Attributes

nameOwner : String[*]	Someone or something that uses this alternative name.

Definition

Package: Dictionary

isAbstract: No

Generalization: MeasurableElement

Description

A comment containing a description of an element in the architecture.

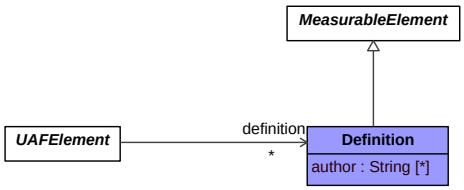

Figure 9:207 - Definition

Attributes

author : String[*]	The original or current person (architect) responsible for the Definition.

SameAs

Package: Dictionary

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that two elements refer to the same real-world thing.

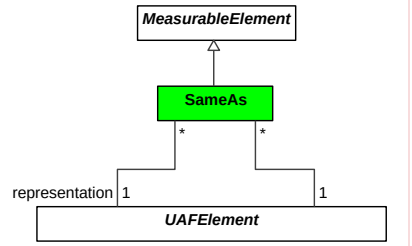

Figure 9:208 - SameAs

Commented [KG495]: UAF12-50 Move to 8.1.1 subsection Architecture Management: Information

Commented [KG496]: UAF12-50 Move to 8.1.2

15.1.92 Domain MetaModel::Summary & Overview

ArchitecturalDescription

Package: Summary & Overview

isAbstract: No

Generalization: MeasurableElement

Description

An Architecture Description is a work product used to express the Architecture of some System Of Interest.
It provides executive-level summary information about the architecture description in a consistent form to allow quick reference and comparison between architecture descriptions -- It includes assumptions, constraints, and limitations that may affect high-level decisions relating to an architecture-based work program.

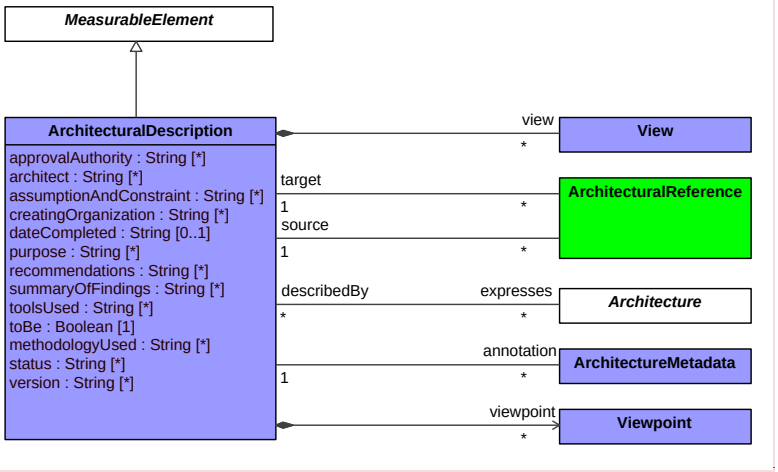

Figure 9:209 - ArchitecturalDescription

Attributes

approvalAuthority : String[*]	Someone or something that has the authority to approve the ArchitecturalDescription.
architect : String[*]	Someone responsible for the creation of ArchitecturalDescription.
assumptionAndConstraint : String[*]	Any assumptions, constraints, and limitations contained in the ArchitecturalDescription, including those affecting deployment, communications performance, information assurance environments, etc.
creatingOrganization : String[*]	The organization responsible for creating the ArchitecturalDescription.
dateCompleted : String[0..1]	Date that the ArchitecturalDescription was completed.
methodologyUsed : String[*]	The methodology used in developing the architecture.
purpose : String[*]	Explains the need for the Architecture, what it will demonstrate, the types of analyses that will be applied to it, who is expected to perform the analyses, what decisions are expected to be made on the basis of each form of analysis, who is expected to make those decisions, and what actions are expected to result.
recommendations : String[*]	States the recommendations that have been developed based on the architecture effort. Examples include recommended system implementations, and opportunities for technology insertion.
status : String[*]	Approval status of the architecture.
summaryOfFindings : String[*]	Summarizes the findings that have been developed so far. This may be updated several times during the development of the ArchitecturalDescription.
toBe : Boolean[1]	Indicates whether the ArchitecturalDescription represents an Architecture that exists or will exist in the future.
toolsUsed : String[*]	Identifies any tools used to develop the ArchitecturalDescription as well as file names and formats if appropriate.
version : String[*]	Version number of the architecture.

Architecture

Package: Summary & Overview

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type that represents a generic architecture. Subtypes are OperationalArchitecture and PhysicalArchitecture.

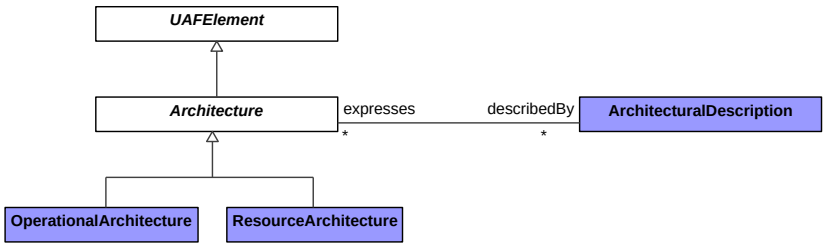

Figure 9:210 - Architecture

Concern

Package: Summary & Overview

isAbstract: No

Generalization: PropertySet

Description

Interest in an EnterprisePhase (EnterprisePhase is synonym for System in ISO 42010) relevant to one or more of its stakeholders.

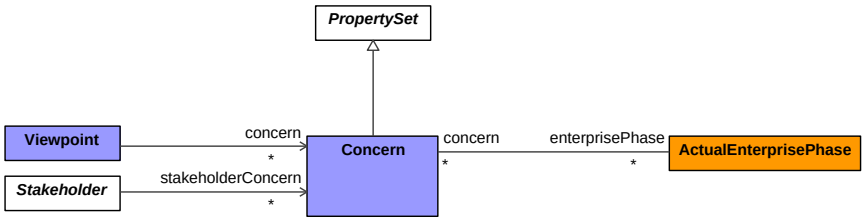

Figure 9:211 - Concern

Stakeholder

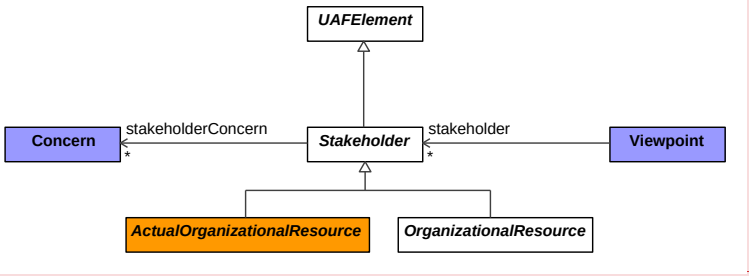
Package: Summary & Overview

isAbstract: Yes

Generalization: UAFElement

Description

Individual, team, organization, or classes thereof, having an interest in an EnterprisePhase [ISO/IEC/IEEE 42010:2011].



~~Figure 9:212 - Stakeholder~~

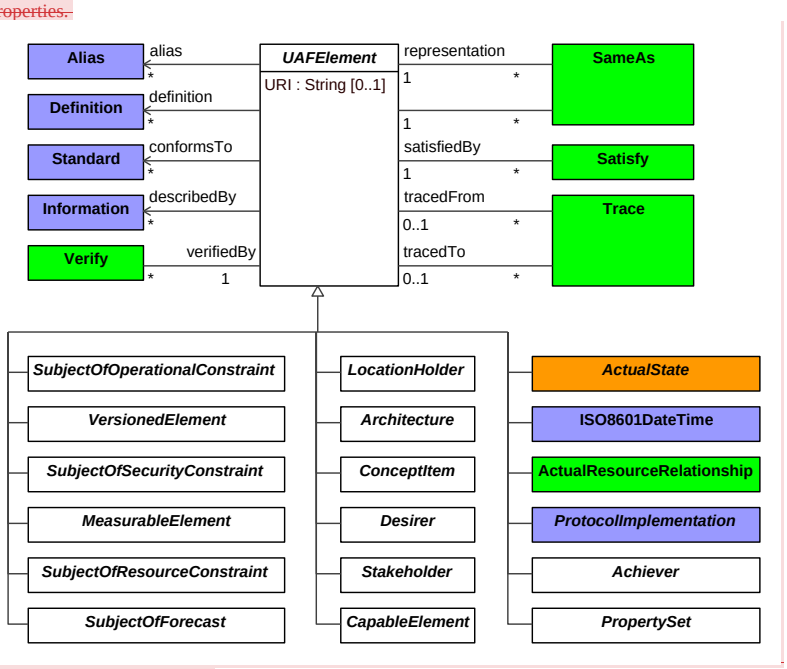
~~UAFElement~~

~~**Package:** Summary & Overview~~

~~isAbstract: Yes~~

~~Description~~

~~Abstract super type for all of the UAF elements. It provides a way for all of the UAF elements to have a common set of properties.~~



~~Figure 9:213 - UAFElement~~

~~Attributes~~

~~URI : String[0..1]~~ ~~Captures Unique identifier for the element.~~

View

Package: Summary & Overview

isAbstract: No

Generalization: PropertySet

Description

An architecture view expresses the architecture of the system-of-interest in accordance with an architecture viewpoint (or simply, viewpoint). [ISO/IEC/IEEE 42010:2011(E)].

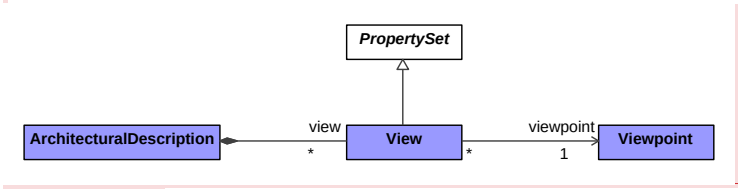


Figure 9:214 - View

Viewpoint

Package: Summary & Overview

isAbstract: No

Generalization: PropertySet

Description

An architecture viewpoint frames (to formulate or construct in a particular style or language) one or more concerns. A concern can be framed by more than one viewpoint. [ISO/IEC/IEEE 42010:2011(E)].

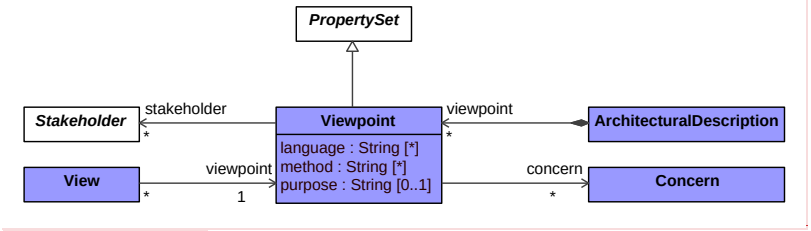

Figure 9:215 - Viewpoint

Attributes

language : String[*]	The languages used to express the Viewpoint.
method : String[*]	The methods employed in the development of the Viewpoint.
purpose : String[0..1]	The purpose of the Viewpoint.

15.1.2029.1.12 Domain MetaModel::Information

DataModel

Package: Information

isAbstract: No

Generalization: SubjectOfOperationalConstraint, SubjectOfResourceConstraint

Description

A structural specification of data types, showing relationships between them. The type of data captured in the DataModel is described using the enumeration DataModelKind (Conceptual,Logical and Physical).

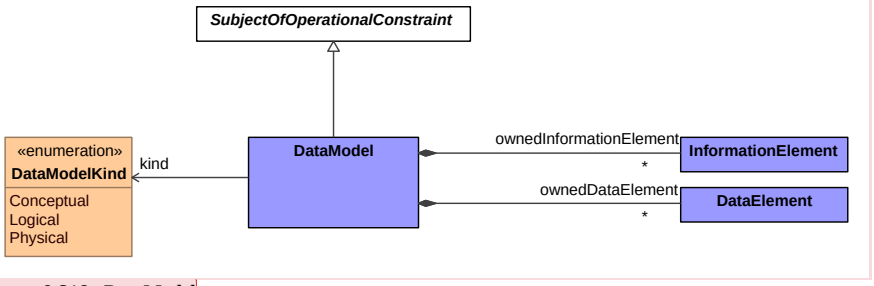

Figure 9:216 - DataModel

Commented [KG497]: UAF12-52

~~15.1.203~~9.1.13 Domain MetaModel::Parameters

ActualCondition

Package: Parameters

isAbstract: No

Generalization: ActualPropertySet

Description

An individual describing an actual situation with respect to circumstances under which an OperationalActivity, Function or ServiceFunction can be performed.

Commented [KG498]: UAF12-48

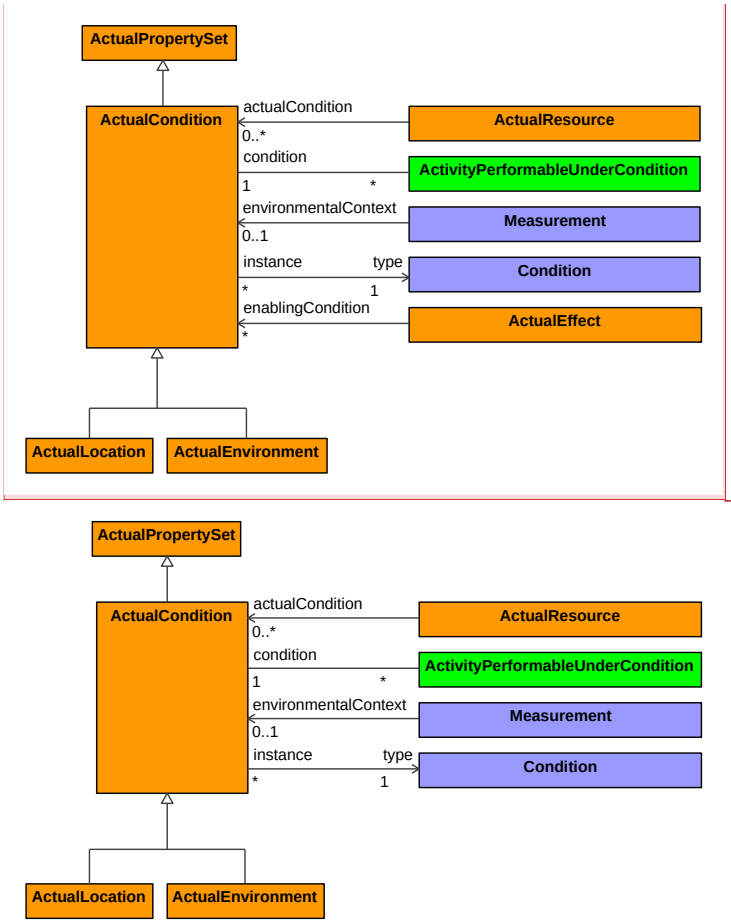

Figure 9:217 - ActualCondition

ActualEnvironment

Package: Parameters

isAbstract: No

Generalization: ActualCondition

Description

An individual that describes the circumstances of an Environment.

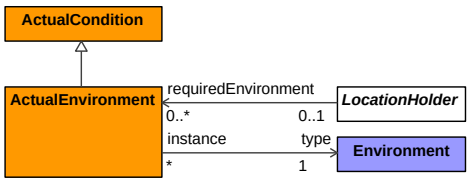

Figure 9:218 - ActualEnvironment

ActualLocation

Package: Parameters

isAbstract: No

Generalization: ActualCondition

Description

An individual that describes a physical location, for example using text to provide an address, Geo-coordinates, etc.

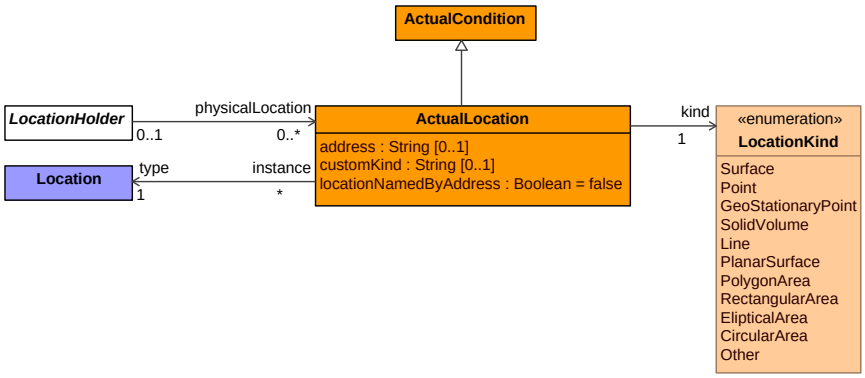

Figure 9:219 - ActualLocation

Attributes

address : String[0..1]	String describing the address of the ActualLocation, i.e. "1600 Pennsylvania avenue", "The White House"
customKind : String[0..1]	String describing a location kind that is not in the LocationKind enumerated list
locationNamedByAddress : Boolean[]	Boolean that indicates if the ActualLocation address is embedded in the ActualLocation name. By default = false.

ActualMeasurement

Package: Parameters

isAbstract: No

Generalization: ActualState

Description

An actual value that is applied to a Measurement.

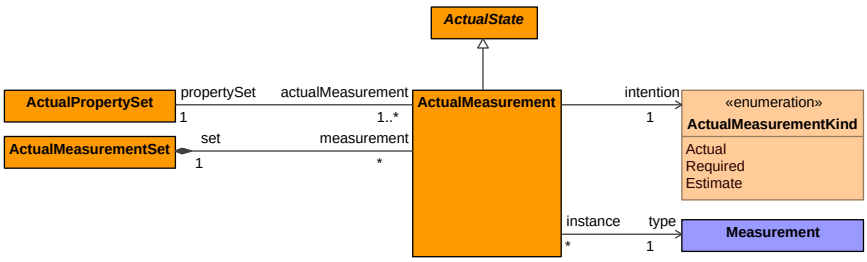

Figure 9:220 - ActualMeasurement

ActualMeasurementSet

Package: Parameters

isAbstract: No

Generalization: ActualPropertySet

Description

A set of ActualMeasurements.

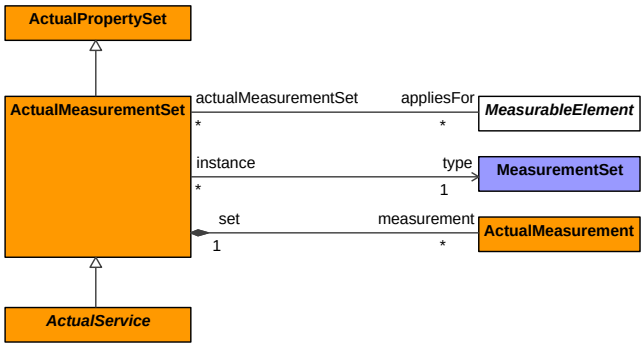

Figure 9:221 - ActualMeasurementSet

ActualPropertySet

Package: Parameters

isAbstract: No

Generalization: ActualState

Description

A set or collection of Actual properties.

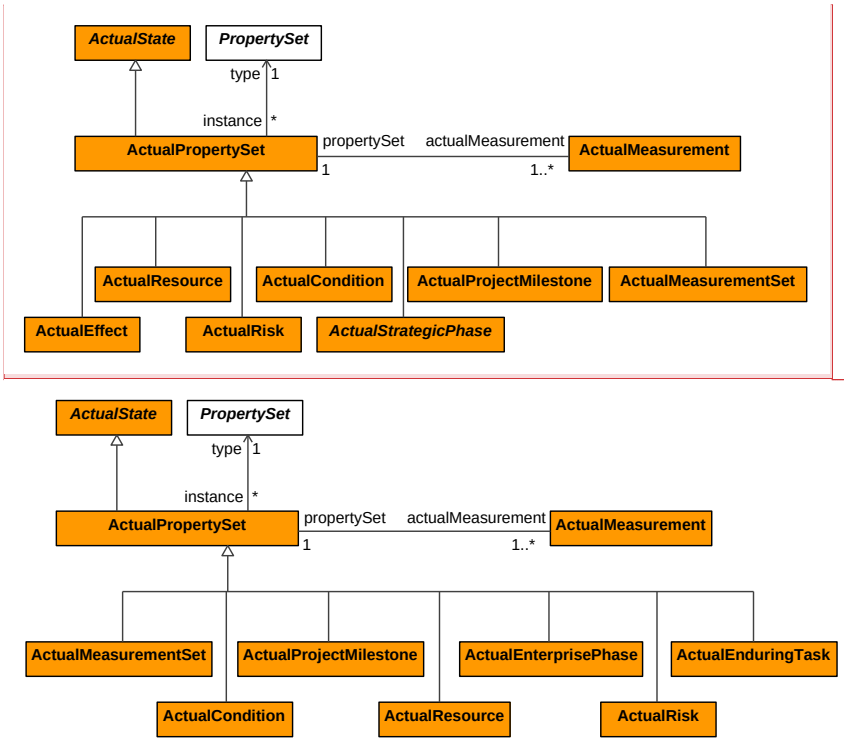

Figure 9:222 - ActualPropertySet

ActualRisk

Package: Parameters~~Constraints~~

isAbstract: No

Generalization: ActualPropertySet

Description

An instance of a Risk. A value holder for Risk Measurements.

Commented [KG499]: UAF12-15

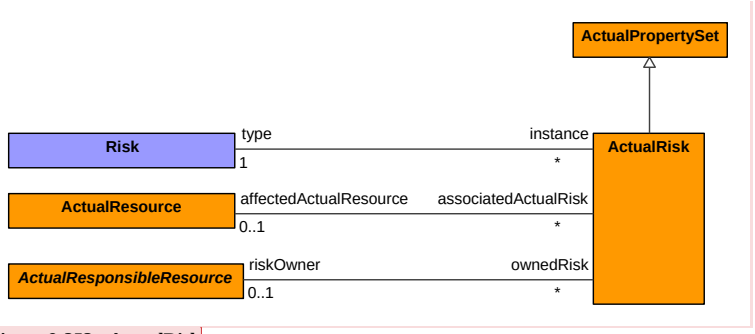

Figure 9:252 - ActualRisk

Commented [KG500]: UAF12-51 Moved from Constraints section

~~ActualState~~

Commented [KG501]: UAF12-54 moved to Architecture Mnagements Section

Formatted: Indent: Left: 0", First line: 0"

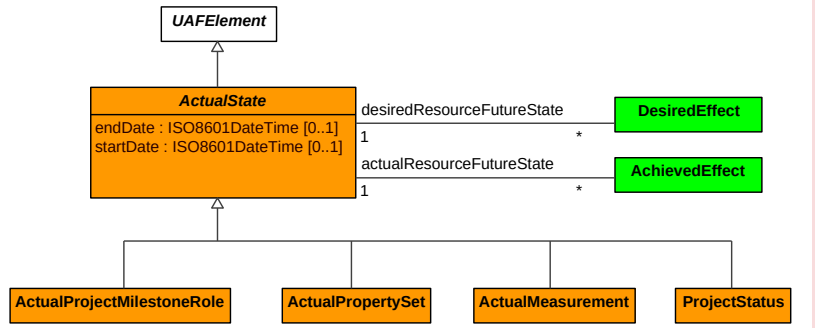
~~**Package:** Parameters~~

~~isAbstract: Yes~~

~~**Generalization:** UAFElement~~

~~Description~~

~~Abstract element that applies temporal extent to a set of elements realized as Instance Specifications.~~



~~**Figure 9:223 - ActualState**~~

~~Attributes~~

~~endDate : ISO8601DateTime[0..1]~~	~~End time for all individual elements.~~
~~startDate : ISO8601DateTime[0..1]~~	~~Start time for all individual elements.~~

AffectableElement

Package: Parameters

isAbstract: Yes

Generalization: UAFElement

Description

An abstract grouping of elements that can be affected by Risk.

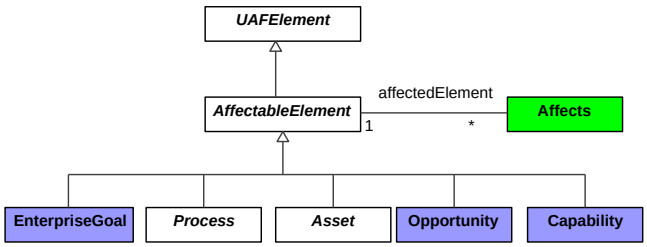


Figure 9:254 - AffectableElement

Affects

Package: Parameters

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that a Risk is applicable to an Asset.

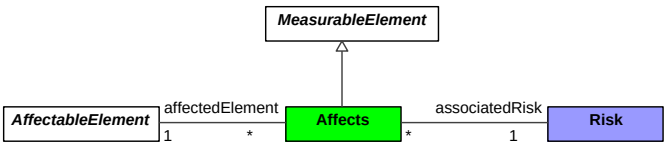

Figure 9:255 - Affects

AffectsInContext

Package: Parameters

isAbstract: No

Generalization: MeasurableElement

Description

A tuple that asserts that a Risk is applicable to an AssetRole in the specific context or configuration.

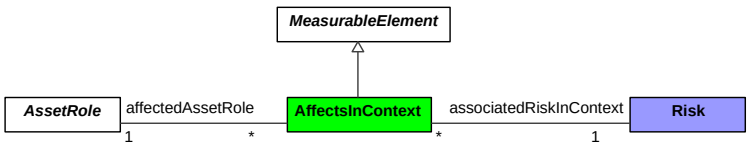

Figure 9:256 - AffectsInContext

Condition

Package: Parameters

Commented [KG502]: UAF12-51
Formatted: Font: 10 pt
Formatted: OMG Heading 4
Formatted: Default Paragraph Font, Font: 10 pt

Commented [KG503]: UAF12-51

Commented [KG504]: UAF12-51
Formatted: Font: Times New Roman
Formatted: Default Paragraph Font, Font: Arial, 10 pt, Bold
Formatted: Font: Times New Roman, 10 pt

isAbstract: No

Generalization: PropertySet

Description

A type that defines the Location, Environment and/or GeoPoliticalExtent.

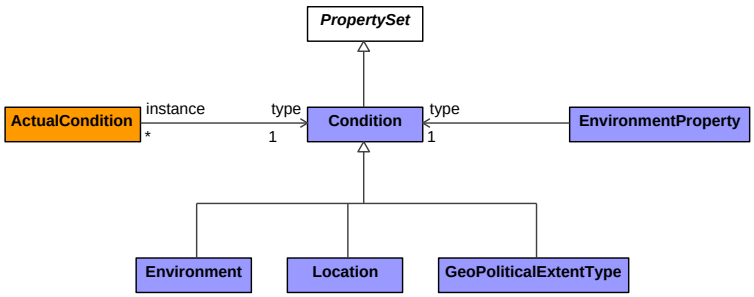

Figure 9:224 - Condition

Environment

Package: Parameters

isAbstract: No

Generalization: Condition

Description

A definition of the environmental factors in which something exists or functions. The definition of an Environment element can be further defined using EnvironmentKind.

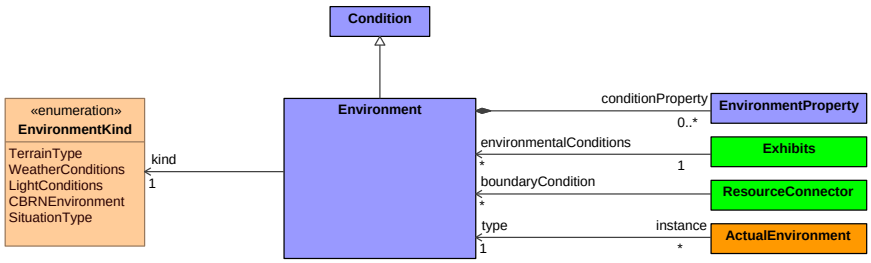

Figure 9:225 - Environment

EnvironmentProperty

Package: Structure

isAbstract: No

Generalization: MeasurableElement

Description

A property of an Environment that is typed by a Condition. The kinds of Condition that can be represented are Location, GeoPoliticalExtentType and Environment.

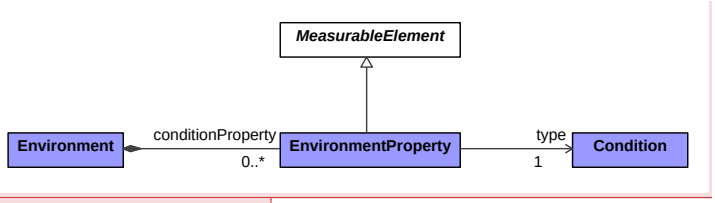

Figure 9:7 - EnvironmentProperty

Commented [KG505]: UAF12-54

GeoPoliticalExtentType

Package: Parameters

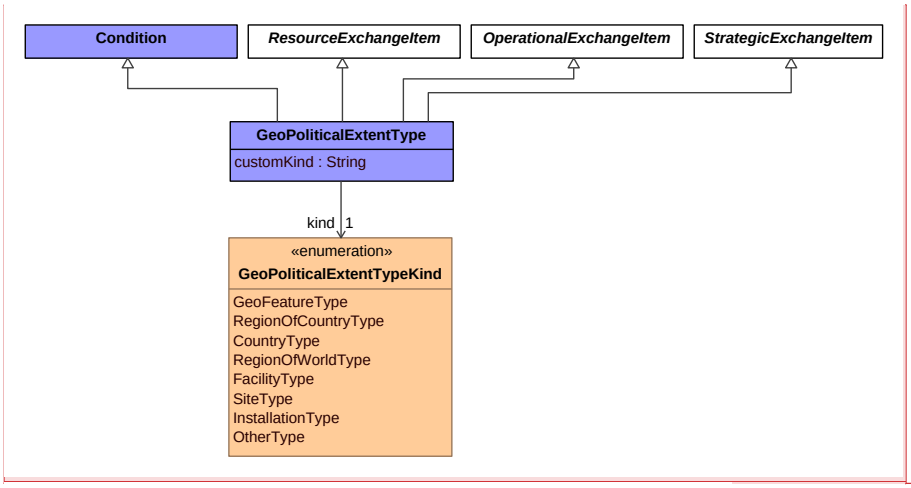
isAbstract: No

Generalization: Condition, OperationalExchangeItem, ResourceExchangeItem, StrategicExchangeItem

Commented [KG506]: UAF12-52

Description

A type of geospatial extent whose boundaries are defined by declaration or agreement by political parties.



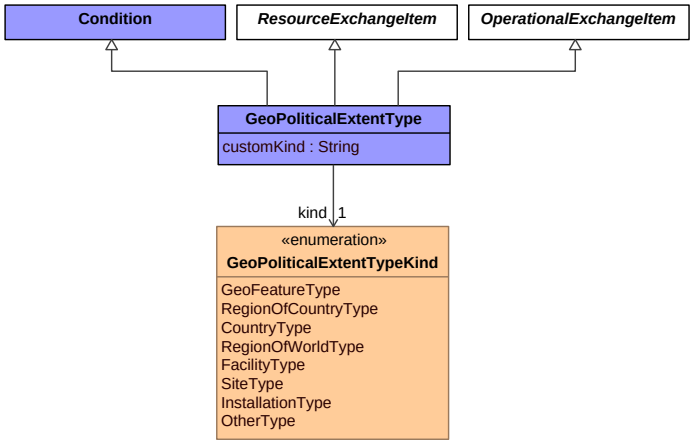


Figure 9:226 - GeoPoliticalExtentType

Attributes

customKind : String[] Captures the kind of GeopoliticalExtentType.

~~**ISO8601DateTime**~~

~~**Package:** Parameters~~

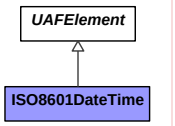
~~isAbstract: No~~

~~**Generalization:** UAFElement~~

~~Description~~

~~A date and time specified in the ISO8601 date-time format including timezone designator (TZD): YYYY-MM-DDThh:mm:ssTZD.~~

Commented [KG507]: UAF12-52



~~Figure 9:227 - ISO8601DateTime~~

Commented [KG508]: UAF12-52
Move to 9.1.1

Location

Package: Parameters

isAbstract: No

Generalization: ConceptItem, Condition

Description

A specification of the generic area in which a LocationHolder is required to be located.

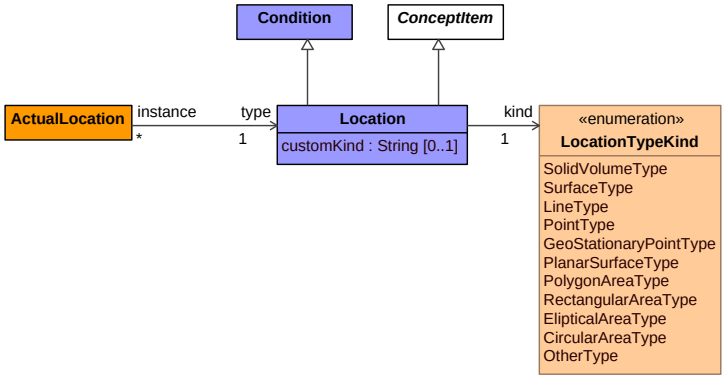


Figure 9:228 - Location

Attributes

customKind : String[0..1] Captures the kind of Location if the LocationTypeKind has been set to "OtherType".

LocationHolder

Package: Parameters

isAbstract: Yes

Generalization: UAFElement

Description

Abstract type, used to group elements that are allowed to be associated with a Location.

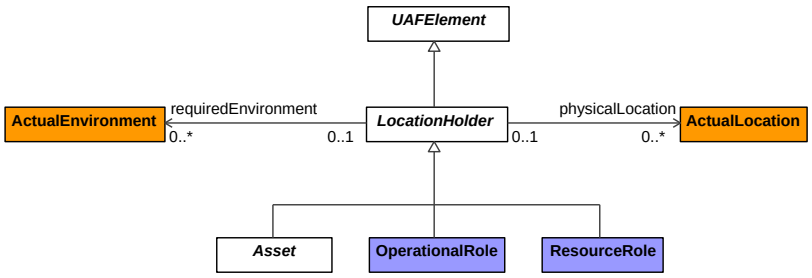

Figure 9:229 - LocationHolder

MeasurableElement

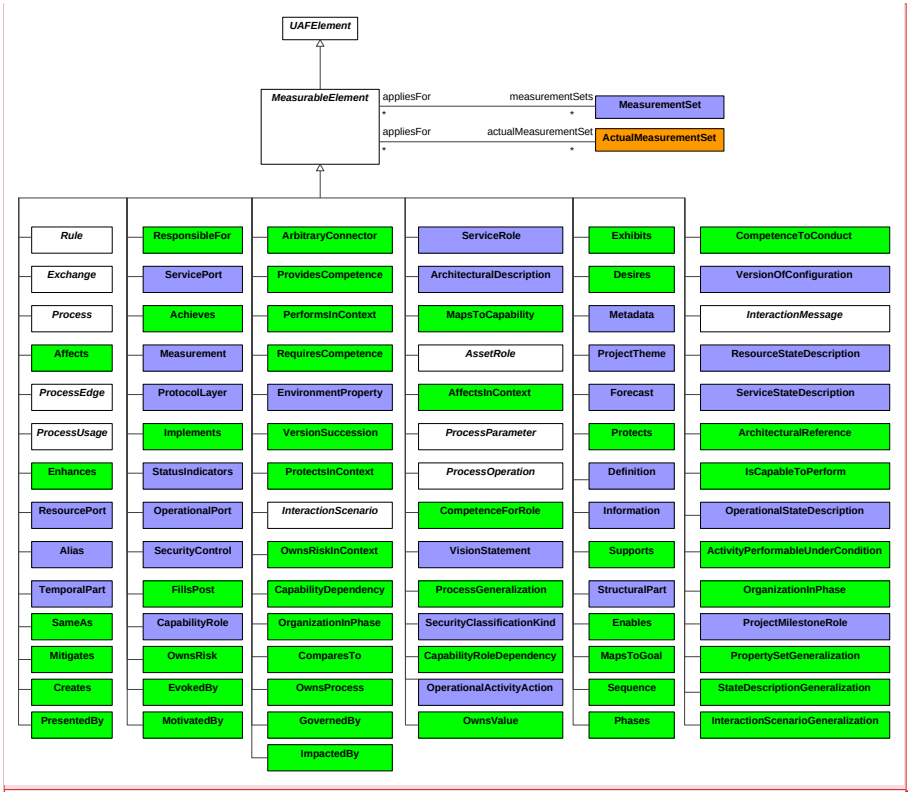
Package: Parameters

isAbstract: Yes

Generalization: UAFElement

Description

Abstract type, grouping elements that can be measured by applying MeasurementSets to them.



Commented [KG509]: UAF12-49
UAF12-50
UAF12-52
UAF12-48
UAF12-33
UAF12-15
UAF12-51
UAF12-117
UAF12-11

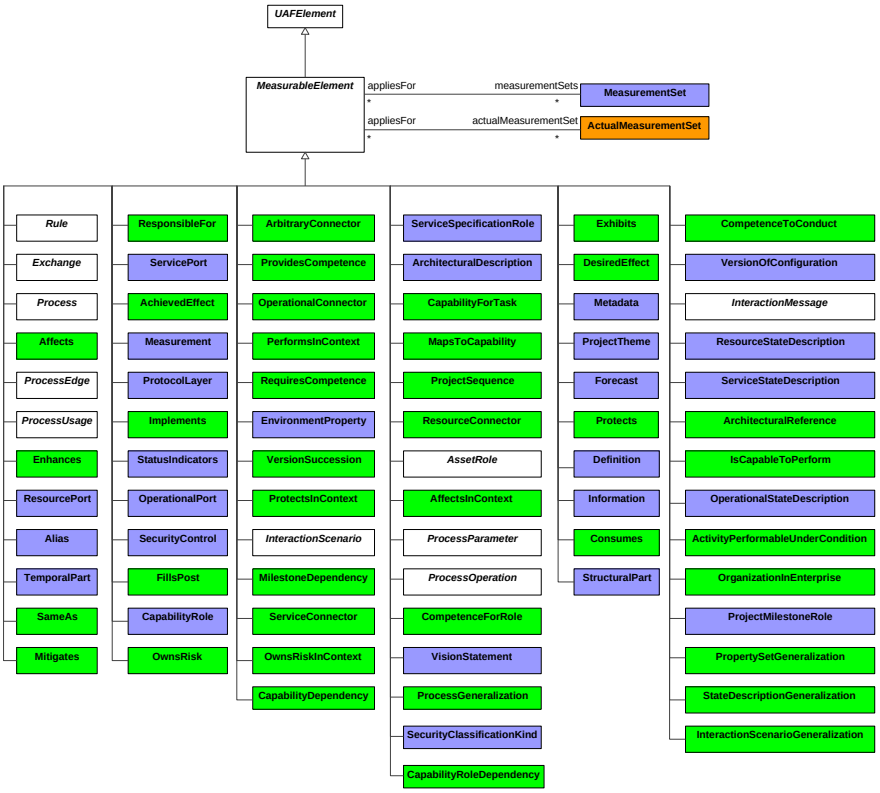


Figure 9:230 - MeasurableElement

Measurement

Package: Parameters

isAbstract: No

Generalization: MeasurableElement

Description

A property of an element representing something in the physical world, expressed in amounts of a unit of measure.

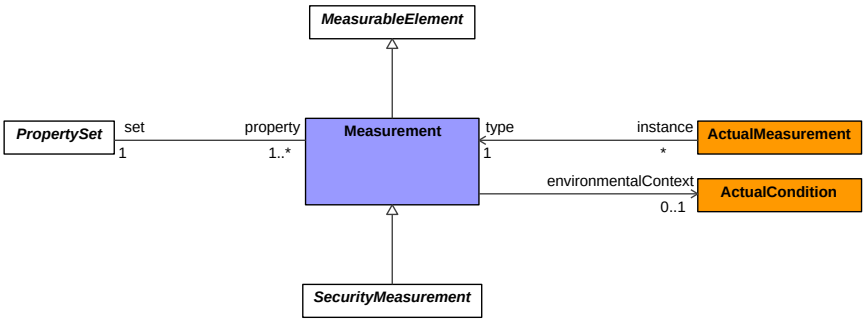

Figure 9:231 - Measurement

MeasurementSet

Package: Parameters

isAbstract: No

Generalization: PropertySet

Description

A collection of Measurements.

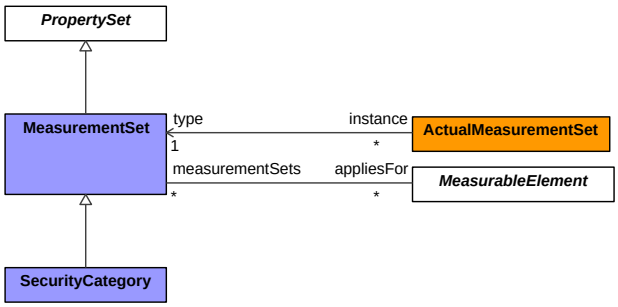

Figure 9:232 - MeasurementSet

Mitigates

Package: ParametersTraceability

Commented [KG510]: UAF12-51

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating a Security Control to a Risk. Mitigation is established to manage risk and could be represented as an overall strategy or through techniques (mitigation configurations) and procedures (SecurityProcesses).

Figure 9:266 - Mitigates

OwnsRisk

Package: ParametersTraceability

Commented [KG511]: UAF12-51

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating a Risk to an organizational resource that is responsible for executing the risk mitigation.

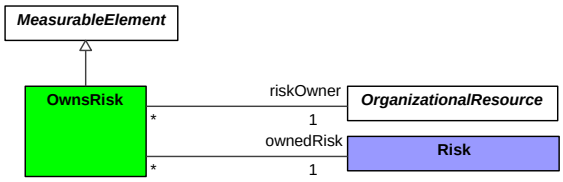

Figure 9:267 - OwnsRisk

OwnsRiskInContext

Package: ParametersTraceability

Commented [KG512]: UAF12-51

isAbstract: No

Generalization: MeasurableElement

Description

A tuple relating a Risk to an organizational role that is responsible for executing the risk mitigation in the specific context or configuration.

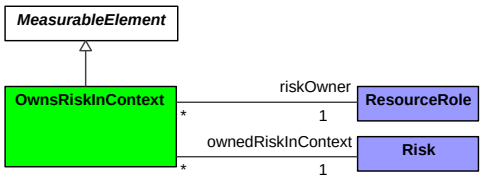

Figure 9:268 - OwnsRiskInContext

PropertySet

Package: Parameters

isAbstract: Yes

Generalization: UAFElement

Description

An abstract type grouping architectural elements that can own Measurements.

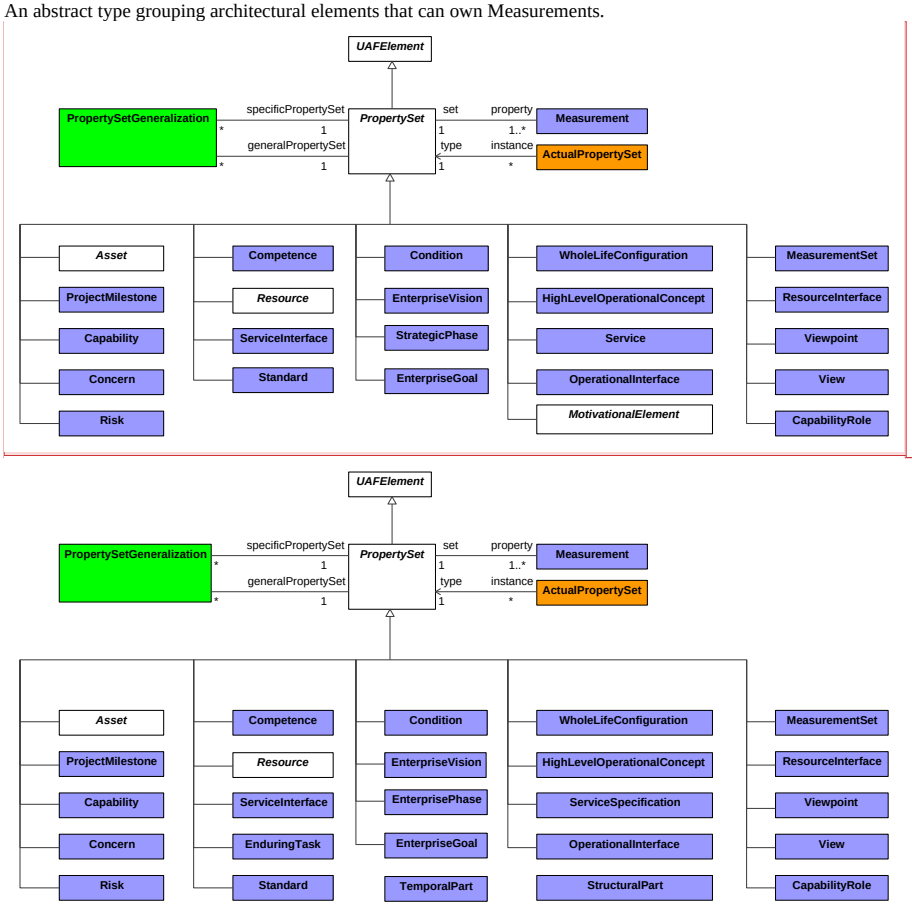

Figure 9:233 - PropertySet

Risk

Package: ParametersConstraints

isAbstract: No

Commented [KG513]: UAF12-15
UAF12-50
UAF12-33

Commented [KG514]: UAF12-51

Generalization: PropertySet

Description

A type that represents a situation involving exposure to danger of AffectableElements (e.g. Assets, Processes, Capabilities, Opportunities, or Enterprise Goals) where the effects of such exposure can be characterized in terms of the likelihood of occurrence of a given threat and the potential adverse consequences of that threat's occurrence.

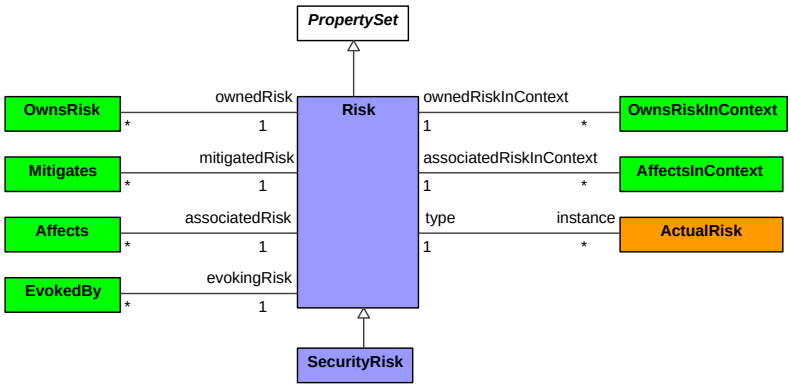

Figure 9:270 - Risk

Formatted: Lithuanian
